# Introduction

## 1.1 Overview

*iCrash* is a simple system dedicated to any person who wants to inform of a car crash crisis situation in order to allow for crisis handling. At anytime and anywhere, anyone can be the witness or victim of a car crash and might be in a situation allowing for alerting this crisis. The *iCrash* system has for objectives to support crisis declaration and secure administration and crisis handling by the *iCrash* professional users.

## 1.2 Purpose and recipients of the document

This document is an analysis document complying with the Messir methodology [?]. Its intent is to provide an example of a precise specification of the functional properties of the *iCrash* system.

The recipients of this document are:

- the *iCrash* system's buyer company (ABC): this document is used as a contractual document jointly with any other document considered as useful (as requirement elicitation document, ...) in order to have a higher degree of precision in requirement description. It is also used as a basis document for the *iCrash* system validation using specification based testing.
- the *iCrash* system development company (ADC) is expected to use this document as the basis for development (mainly design, implementation, maintenance). It is also used for verification and validation using test plans defined using the analysis models described in this document and according to the Messir methodology.

## 1.3 Application Domain

The *iCrash* system belongs to the Crisis Management Systems Domain. It is a system dedicated to crisis professional and non professional end users. It has to be considered as an autonomous and external service for the society. It is not an institutional system certified and guaranteed by any governmental entity and thus, must be used with caution.

## 1.4 Definitions, acronyms and abbreviations

N.A.

## 1.5 Document structure

The document structure is designed to be coherent with the Messir methodology [?]. Section 2 provides a general description of the system purpose, its users, its environment and some general non functional requirements. A more detailed description of the non functional requirements, if any, are provided in section **??**. The system operation triggered by events sent by the external actors belonging to the environment are described in Section 3. The *iCrash* concepts used to represent the any persistent or transient information is given in Section 4. The precise specification of the system operations in term of system's state changes, events sent together with the constraints on the allowed sequences of system operations are described in Section 5.

# Chapter 2

# General Description

In the context of the Messir method, the information provided in this section is intended to present the system for which the Messir analysis is provided. The content of this section is made accordingly to the requirements elicitation document that might have been done during the project but also adapted coherently in order to be an abstract introduction to the Messir analysis.

## 2.1 Domain Stakeholders

All stakeholders of the system are detailed in this section. After a brief description of a stakeholder, its objectives are first stated. Thereafter, the responsibilities of the stakeholder are detailed which help to achieve the stakeholder objectives to a certain degree. While the objectives characterize the general problems addressed by the *iCrash* system, the responsibilities describe concrete actions that are expected from a stakeholder. Some of these responsibilities can be traced looking at the use case described in Section B.1,and hence must be supported by the *iCrash* system. All stakeholders listed in this section have an interest in the system or are affected by the system in some way, but only a subset of the stakeholders are directly involved in the use cases described. Let us remind that use case diagrams or descriptions are not Messir analysis phase mandatory outputs. They are proposed as informal means to help understanding the semantics of the system specification made of the mandatory analysis models, which provide a complete executable specification.

### 2.1.1 Communication Company

A Communication Company is a company that has the capacity to ensure communication of information between its customers and the *iCrash* system. The objectives of a Communication Company are:

- to be able to deliver any SMS sent by any human to the *iCrash* 's phone number.
- to be able to transmit SMS messages from the ABC company that owns the *iCrash* system to any human having an SMS compatible device accessible using a phone number.

In order to achieve these objectives, the responsibilities of a Communication Company are:

- ensure confidentiality and integrity of the information sent by a human to the *iCrash* system or from the system to a human.
- to be always available and reliable.

### 2.1.2 Humans

A human is any person who considers himself related to a car crash either as a witness, a victim or an anonymous person. The objectives of a human are:

- inform the *iCrash* system about the crisis situation he detected.
- be sure that the ABC company has been informed about the situation.
- to be informed about the situation of the crisis he his related to as a victim or witness.

In order to achieve these objectives, the responsibilities of a human are:

- to provide has much details as possible concerning the crisis to the ABC company.
- to declare a crisis only if the crisis is real.
- to have access to the SMS compatible communication device he used to communication with the *iCrash* system.

### 2.1.3 Coordinators

A coordinator is a employee of the ABC company being responsible of handling one or several crisis. The objectives of a coordinator are:

- to securely monitor the existing alerts and crisis.
- to securely manage alerts and crisis until their termination.

In order to achieve these objectives, the responsibilities of a coordinator are:

- to be capable to determine how an alert received should be considered.
- to be available to react to requests to handle alerts and crisis.
- to be autonomous in handling crisis and to report on its handling.
- to be able to decide when a crisis or an alert can be closed.
- to know its system identification information for secure usage of the system.

### 2.1.4 Administrator

An administrator is a employee of the ABC company being responsible of administrating the *iCrash* system. The objectives of an administrator are:

- to add or delete coordinator actors from the system and its environment.

In order to achieve these objectives, the responsibilities of a coordinator are:

- know the company employees that can be coordinators and that have access to the system.
- to know its system identification information for secure usage of the system.
- to know the security policy of the ABC company.
- to communicate the coordinators their identification information for secure system usage.

### 2.1.5 Creator

Any system has a `Creator` stakeholder which is a technician who is installing the *iCrash* system on the targeted deployment infrastructure.

The objectives of a `Creator` are:

- to install the *iCrash* system
- to define the values for the initial system's state
- to define the values for the initial system's environment
- to ensure the integration of the *iCrash* system with its initial environment

In order to achieve these objectives, the responsibilities of a `Creator` are:

- provide the necessary data to the *iCrash* system for its initialization.

### 2.1.6 Activator

An `activator` is a logical representation of the active part the *iCrash* system. It represents an implicit stakeholder belonging to the system's environment that interacts with the *iCrash* system autonomously without the need of a external entity. It is usually used for representing time triggered functionalities.

The objectives of a `activator` are:

- to communicate the current time to the system
- to notify the administrator that some crisis are still pending for a too long time.

In order to achieve these objectives, the responsibilities of a `activator` are:

- to know the current universal time
- to send the messages to the system according to the time constraints specifically defined for it.

## 2.2 System's Actors

The objective of this section is not to provide the full requirement elicitation document in this section but to reuse a part of this document to provide a informal introduction to the Messir specification of the system under development. The use case model is made of a use case diagrams modelling abstractly and informally the actors and their use cases together with a set of use cases descriptions. In addition, those diagrams and description tables are adapted to the Messir specification since actor and messages names together with parameters are partly adapted to be consistent with the specification identifiers (see [?] for more details).

Among all the stakeholders presented in the previous section, we can determine five types of direct actors[1]:

- `actComCompany`: for the Communication Company stakeholder.
- `actAdministrator`: for the Administrator stakeholder.
- `actCoordinator`: for the Coordinators stakeholders.
- `actActivator`: for the Activator stakeholder.
- `actMsrCreator`: for the Creator stakeholder.

In addition to those system actors, we can add five other types of actors related to the system's ones. Those five actors are grouped into two categories:

- *Indirect actors*
  - *Witness*: for any human that is a witness of a car crash
  - *Victim*: for any human that is a victim of a car crash
  - *Anonymous*: for any human that want to inform about a car crash while staying anonymous.
- *Abstract actors*
  - `actHuman`: represent abstractly any kind of human being actor wanting to communicate with the ABC system in the context of a car crash.
  - `actAuthenticated`: for the logical Activator stakeholder.

## 2.3 Use Cases Model

This section contains the use cases elicited during the requirements elicitation phase. The use cases are textually described as suggested by the Messir method and inspired by the standard Cokburn template [?].

### 2.3.1 Use Cases

#### 2.3.1.1 summary-suDeployAndRun

The goal is to install the iCrash system on its infrastructure and to exploit its capacities related to the secure administration and efficient handling of car crash situations depending on alerts received.

[1]The naming conventions in Messir propose to start each type name by lowercase letters indicating the meta model type used (i.e. act for actors, ct for class type, .... In addition to ease the reading it makes the translational semantics into Prolog code more straightforward.

| Use-Case Description | |
|---|---|
| *Name* | suDeployAndRun |
| *Scope* | system |
| *Level* | summary |
| ***Primary actor(s)*** | |
| 1 | actAdministrator[active] |
| ***Secondary actor(s)*** | |
| 1 | actMsrCreator[active] |
| 2 | actCoordinator[active, multiple] |
| 3 | actActivator[proactive] |
| 4 | actComCompany[active] |
| ***Goal(s) description*** | |
| The goal is to install the iCrash system on its infrastructure and to exploit its capacities related to the secure administration and efficient handling of car crash situations depending on alerts received. | |
| ***Reuse*** | |
| 1 | oeCreateSystemAndEnvironment [1..1] |
| 2 | ugAdministrateTheSystem [1..*] |
| 3 | suGlobalCrisisHandling [1..*] |
| 4 | oeSetClock [1..*] |
| 5 | oeSollicitateCrisisHandling [0..*] |
| 6 | oeAlert [1..*] |
| ***Protocol condition(s)*** | |
| 1 | the iCrash system has never been deployed and used |
| ***Pre-condition(s)*** | |
| 1 | none |
| ***Main post-condition(s)*** | |
| 1 | the iCrash system has been created and has handled the crisis situations for which it received alerts through the communication company. |
| ***Main Steps*** | |
| a | the actor actMsrCreator executes the oeCreateSystemAndEnvironment use case |
| b | the actor actAdministrator executes the ugAdministrateTheSystem use case |
| c | the actor actComCompany executes the oeAlert use case |
| d | the actor actActivator executes the oeSetClock use case |
| e | the actor actActivator executes the oeSollicitateCrisisHandling use case |
| f | the actor actCoordinator executes the suGlobalCrisisHandling use case |
| ***Steps Ordering Constraints*** | |
| 1 | step (a) must be always the first step. |
| 2 | step (f) can be executed by different actCoordinator actors. |
| 3 | if (e) then previously (d). |

Figure 2.1 shows the use case diagram for the suDeployAndRun summary use case

#### 2.3.1.2 summary-suGlobalCrisisHandling

the actCoordinator's goal is to monitor the alerts received and the corresponding crisis in order to act as necessary to handle the crisis.

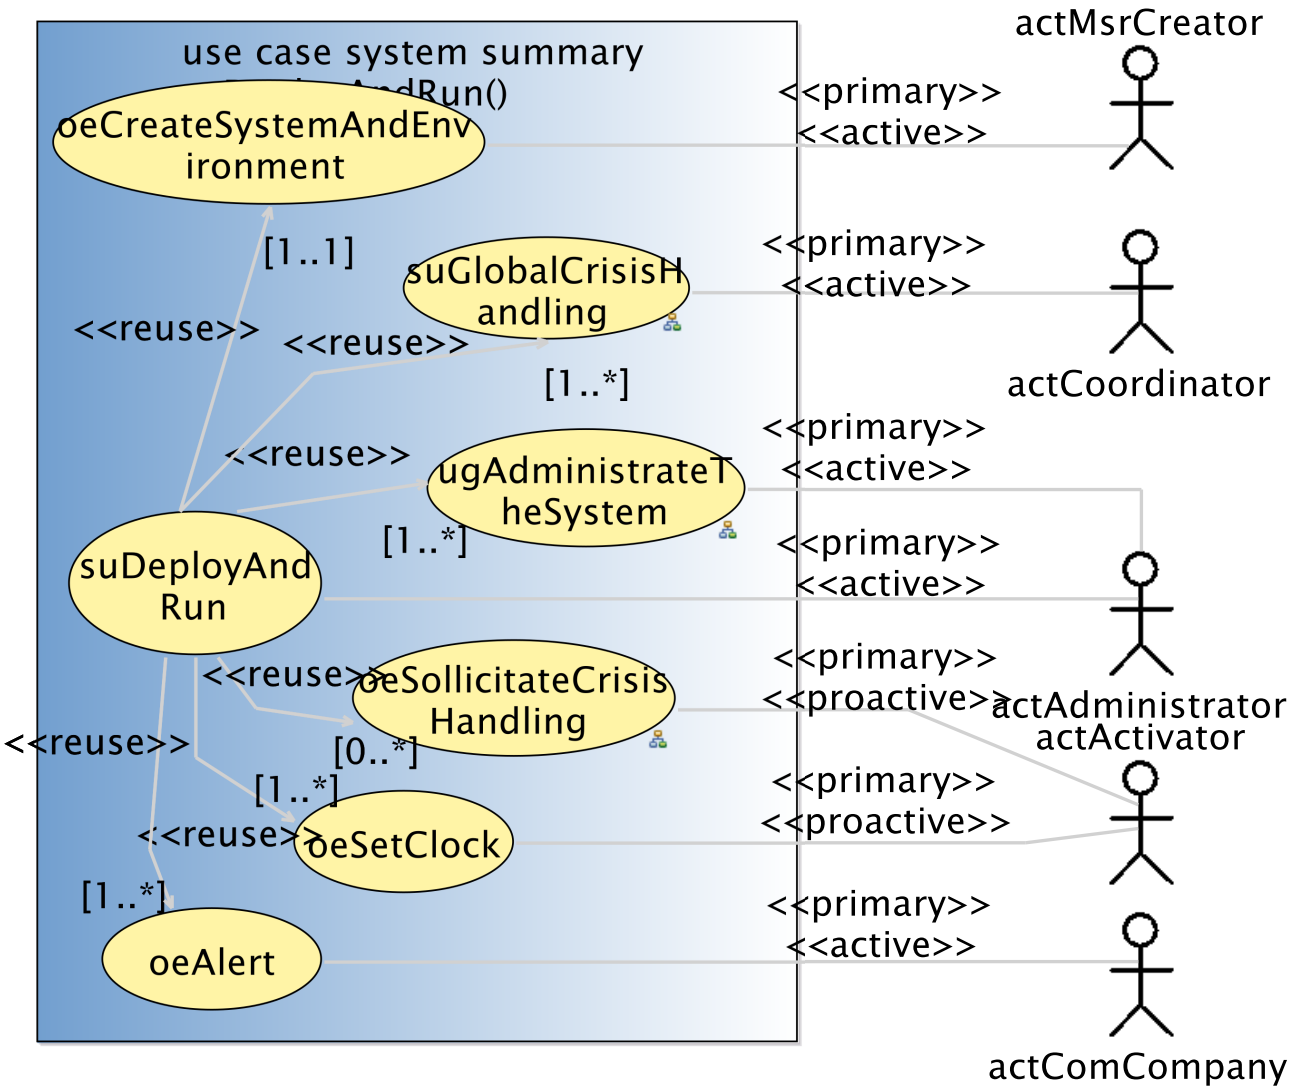

Figure 2.1: suDeployAndRun summary use case

| Use-Case Description | |
|---|---|
| *Name* | suGlobalCrisisHandling |
| *Scope* | system |
| *Level* | summary |
| ***Primary actor(s)*** | |
| 1 | actCoordinator[active] |
| ***Goal(s) description*** | |
| the actCoordinator's goal is to monitor the alerts received and the corresponding crisis in order to act as necessary to handle the crisis. | |
| ***Reuse*** | |
| 1 | ugSecurelyUseSystem [1..*] |
| 2 | ugMonitor [1..*] |
| 3 | ugManageCrisis [1..*] |
| ***Protocol condition(s)*** | |
| 1 | the iCrash system has been deployed |
| 2 | the coordinator actor involded in the use case has been declared by the actor actAdministrator |
| ***Pre-condition(s)*** | |
| 1 | none |
| ***Main post-condition(s)*** | |
| 1 | modifications have been made by the coordinator on existing alerts or crisis OR the coordinator requested an updated status on existing alerts or crisis. |
| ***Main Steps*** | |
| a | the actor actCoordinator executes the ugSecurelyUseSystem use case |
| b | the actor actCoordinator executes the ugMonitor use case |
| c | the actor actCoordinator executes the ugManageCrisis use case |
| ***Steps Ordering Constraints*** | |
| 1 | steps (a) (b) and (c) executions are interleaved (steps (b) and (c) have their protocol constrained by steps of (a)). |
| 2 | steps (a) (b) and (c) can be executed multiple times. |

Figure 2.2 shows the use case diagram for the suGlobalCrisisHandling user goal use case

#### 2.3.1.3 usergoal-ugAdministrateTheSystem

the actAdministrator's goal is to follow an identification procedure to be allowed to add or delete the necessary crisis coordinators that will be granted the responsibility to handle alerts and crisis.

| Use-Case Description | |
|---|---|
| *Name* | ugAdministrateTheSystem |
| *Scope* | system |
| *Level* | usergoal |
| ***Primary actor(s)*** | |

| ***Pre-condition(s)*** | |
| 1 | none |
| ***Main post-condition(s)*** | |
| 1 | modifications have been made to the system and its environment concerning existing or new coordinators. |
| ***Main Steps*** | |
| a | the actor actAdministrator executes the ugSecurelyUseSystem use case |
| b | the actor actAdministrator executes the oeAddCoordinator use case |
| c | the actor actAdministrator executes the oeDeleteCoordinator use case |
| ***Steps Ordering Constraints*** | |
| 1 | steps (a) (b) and (c) executions are interleaved (steps (b) and (c) have their protocol constrained by steps of (a)). |
| 2 | steps (a) (b) and (c) can be executed multiple times. |

Figure 2.3 shows the use case diagram for the ugAdministrateTheSystem user goal use case

#### 2.3.1.4 usergoal-ugAverageTypeofCrisis

An actor has been login as a Administrator to use the statistic function. So he can see the average time for the different types of a crises

| USE-CASE DESCRIPTION | |
|---|---|
| *Name* | ugAverageTypeofCrisis |
| *Scope* | system |
| *Level* | usergoal |
| ***Primary actor(s)*** | |
| 1 | actAdministrator[active] |
| 2 | actDatabase[proactive] |
| ***Secondary actor(s)*** | |
| 1 | actSystem[active] |
| ***Goal(s) description*** | |
| An actor has been login as a Administrator to use the statistic function. So he can see the average time for the different types of a crises | |
| ***Reuse*** | |
| 1 | oeStatistic [1..*] |
| 2 | ugSercurelyUserSystem [0..*] |
| 3 | oeTimeOfTypeOfCrisis [0..*] |
| 4 | ugAdministrateTheSystem [1..*] |
| ***Protocol condition(s)*** | |

***continues in next page . . .***

***... Use-Case Description table continuation***

| | |
|---|---|
| 1 | The actor has been login as a administrator and he has to click on the button static. |
| 2 | The actor must be able to access the system (connected to the internet) |
| ***Pre-condition(s)*** | |
| 1 | The actor is not login as a administrator, so he can click the button statistic. |
| ***Main post-condition(s)*** | |
| 1 | if the login was successful, the actor is now identified and thus able to access the AdministrateTheSystem |
| 2 | The actor can click the button statistic and so he see the statistic |
| ***Main Steps*** | |
| a | the actor `actSystem` executes the `ugSercurelyUserSystem` use case |
| b | the actor `actSystem` executes the `oeStatistic` use case |
| c | the actor `actAdministrator` executes the `oeTimeOfTypeOfCrisis` use case |
| d | the actor `actAdministrator` executes the `ugAdministrateTheSystem` use case |
| e | the actor `actDatabase` executes the `oeTimeOfTypeOfCrisis` use case |
| ***Steps Ordering Constraints*** | |
| 1 | at least a |
| 2 | if b then previously a |
| 3 | if c then previously b |
| 4 | if d then previously c |
| ***Additional Information*** | |
| none | |

Figure 2.4 The actor administrator will open the statics the average time for each type of crises,there the administrator can find out how long the different types of crisis needs.The tree types of a crises are small, medium and huge . Also the abstract user System give the information

#### 2.3.1.5 usergoal-ugCrisisInTime

An actor has been login as a Administrator to use the statistic function. So he can see the number of crises compared with the time

| **USE-CASE DESCRIPTION** | |
|---|---|
| *Name* | ugCrisisInTime |
| *Scope* | system |
| *Level* | usergoal |
| ***Primary actor(s)*** | |
| 1 | `actAdministrator[active]` |
| 2 | `actDatabase[proactive]` |
| ***Secondary actor(s)*** | |
| 1 | `actSystem[active]` |
| ***Goal(s) description*** | |
| An actor has been login as a Administrator to use the statistic function. So he can see the number of crises compared with the time | |
| ***Reuse*** | |
| 1 | `oeStatistic [1..*]` |
| 2 | `ugSercurelyUserSystem [0..*]` |

***continues in next page . . .***

***... Use-Case Description table continuation***

| | |
|---|---|
| 3 | oeNumberOfCrisis [0..*] |
| 4 | ugAdministrateTheSystem [1..*] |
| ***Protocol condition(s)*** | |
| 1 | The actor has been login as a administrator and he has to click on the button static. |
| 2 | The actor must be able to access the system (connected to the internet) |
| ***Pre-condition(s)*** | |
| 1 | The actor is not login as a administrator, so he can click the button statistic. |
| ***Main post-condition(s)*** | |
| 1 | if the login was successful, the actor is now identified and thus able to access the AdministrateTheSystem |
| 2 | The actor can click the button statistic and so he see the statistic |
| ***Main Steps*** | |
| a | the actor actSystem executes the ugSercurelyUserSystem use case |
| b | the actor actSystem executes the oeStatistic use case |
| c | the actor actAdministrator executes the oeNumberOfCrisis use case |
| d | the actor actAdministrator executes the ugAdministrateTheSystem use case |
| e | the actor actDatabase executes the oeNumberOfCrisis use case |
| ***Steps Ordering Constraints*** | |
| 1 | at least a |
| 2 | if b then previously a |
| 3 | if c then previously b |
| 4 | if d then previously c |
| ***Additional Information*** | |
| none | |

Figure 2.5 The actor administrator will open the statics The number of crisis at the time, there he can find out how many crisis are send at the different time. Also the abstract user System give the information

#### 2.3.1.6 usergoal-ugLogin

An actor wants to identify himself in order to gain access to the systems functionalities

| **Use-Case Description** | |
|---|---|
| *Name* | ugLogin |
| *Scope* | system |
| *Level* | usergoal |
| ***Primary actor(s)*** | |
| 1 | actAuthenticated[active] |
| ***Secondary actor(s)*** | |
| 1 | actCaptchaGenerator[active] |
| 2 | actCaptchaValidator[active] |
| 3 | actMailingService[active] |
| ***Goal(s) description*** | |
| An actor wants to identify himself in order to gain access to the systems functionalities | |
| ***Reuse*** | |

***continues in next page ...***

***... Use-Case Description table continuation***

| | |
|---|---|
| 1 | oeLogin [1..1] |
| 2 | oeSendCaptcha [1..1] |
| 3 | oeSubmitCaptcha [1..1] |
| 4 | oeCaptchaInvalid [1..1] |
| 5 | oeCaptchaValid [1..1] |
| ***Protocol condition(s)*** | |
| 1 | the system has to be started |
| 2 | the actor (client) must be able to access the system (connected to the internet) |
| ***Pre-condition(s)*** | |
| 1 | the actor is not identified (logged in) and thus not able to access the systems functionalities |
| ***Main post-condition(s)*** | |
| 1 | if the login was successful, the actor is now identified and thus able to access the systems functionalities |
| 2 | if an attempt to log in failed, the authentication is refused and the actor has to try again |
| 3 | if the actor failed three times to log in, each further attempt to log in is accompanied by a captcha verification test |
| 4 | if the actor failed three times to log in without and five times with captcha verification, the requested user name will be blocked from further log in attempts |
| ***Main Steps*** | |
| a | the actor actAuthenticated executes the oeLogin use case |
| b | the actor actCaptchaGenerator executes the oeSendCaptcha use case |
| c | the actor actAuthenticated executes the oeSubmitCaptcha use case |
| d | the actor actCaptchaValidator executes the oeCaptchaInvalid use case |
| e | the actor actCaptchaValidator executes the oeCaptchaValid use case |
| ***Steps Ordering Constraints*** | |
| 1 | at least a |
| 2 | if b then previously a |
| 3 | if c then previously b |
| 4 | if d then previously c |
| 5 | if e then previously c |
| ***Additional Information*** | |
| none | |

Figure 2.6 An actor tries to log in to the system using his credentials

#### 2.3.1.7 usergoal-ugManageCrisis

The goal is to do an action that makes the handling of a crisis or an alert progress.

| USE-CASE DESCRIPTION | |
|---|---|
| *Name* | ugManageCrisis |
| *Scope* | system |
| *Level* | usergoal |
| ***Primary actor(s)*** | |
| 1 | actCoordinator[active] |

| 2 | oeSetCrisisStatus [0..*] |
| 3 | oeSetCrisisHandler [0..*] |
| 4 | oeReportOnCrisis [0..*] |
| 5 | oeCloseCrisis [0..*] |
| 6 | oeInvalidateAlert [0..*] |
| ***Protocol condition(s)*** | |
| 1 | the iCrash system has been deployed |
| ***Pre-condition(s)*** | |
| 1 | none |
| ***Main post-condition(s)*** | |
| 1 | there exist one alert or one crisis whose related information has been changed. |
| ***Main Steps*** | |
| a | the actor actCoordinator executes the oeValidateAlert use case |
| b | the actor actCoordinator executes the oeSetCrisisStatus use case |
| c | the actor actCoordinator executes the oeSetCrisisHandler use case |
| d | the actor actCoordinator executes the oeReportOnCrisis use case |
| e | the actor actCoordinator executes the oeCloseCrisis use case |
| f | the actor actCoordinator executes the oeInvalidateAlert use case |
| ***Steps Ordering Constraints*** | |
| 1 | managing a crisis is doing one of the indicated use cases. |

Figure 2.7 shows the use case diagram for the ugManageCrisis user goal use case

#### 2.3.1.8 usergoal-ugMonitor

the actCoordinator's goal is to get the detailed list of existing crisis or alerts to decide on next actions to undertake.

| USE-CASE DESCRIPTION | |
|---|---|
| *Name* | ugMonitor |
| *Scope* | system |
| *Level* | usergoal |
| ***Primary actor(s)*** | |
| 1 | actCoordinator[active] |
| ***Goal(s) description*** | |
| the actCoordinator's goal is to get the detailed list of existing crisis or alerts to decide on next actions to undertake. | |
| ***Reuse*** | |

#### 2.3.1.13 subfunction-oeCaptchaInvalid

Notifies the system that the supplied captcha answer is invalid

| Use-Case Description | |
|---|---|
| *Name* | oeCaptchaInvalid |
| *Scope* | system |
| *Level* | subfunction |
| ***Primary actor(s)*** | |
| 1 | `actCaptchaValidator[active]` |
| ***Secondary actor(s)*** | |
| 1 | `actMailingService[]` |
| 2 | `actAuthenticated[]` |
| ***Goal(s) description*** | |
| Notifies the system that the supplied captcha answer is invalid | |
| ***Protocol condition(s)*** | |
| 1 | The system must have requested the generation of a captcha test from the generation actor first and should have received a captcha test |
| 2 | The system must have submitted or forwarded an answer to the captcha test to the validation actor |
| ***Pre-condition(s)*** | |
| 1 | The submitted answer to the captcha test is incorrect |
| ***Main post-condition(s)*** | |
| 1 | The system is notified about the failure state of the submitted answer to the captcha test |
| 2 | If the requested user name failed five times in a row to log in, the user name will be blocked and a mail with instructions to unblock the user name will be send to the affected user |
| ***Additional Information*** | |
| none | |

#### 2.3.1.14 subfunction-oeCaptchaValid

Notifies the system that the supplied captcha answer is valid

| Use-Case Description | |
|---|---|
| *Name* | oeCaptchaValid |
| *Scope* | system |
| *Level* | subfunction |
| ***Primary actor(s)*** | |
| 1 | `actCaptchaValidator[active]` |
| ***Secondary actor(s)*** | |
| 1 | `actAuthenticated[]` |
| ***Goal(s) description*** | |
| Notifies the system that the supplied captcha answer is valid | |
| ***Protocol condition(s)*** | |
| 1 | The system must have requested the generation of a captcha test from the generation actor first and should have received a captcha test |
| 2 | The system must have submitted or forwarded an answer to the captcha test to the validation actor |
| ***Pre-condition(s)*** | |
| 1 | The submitted answer to the captcha test is correct |
| ***Main post-condition(s)*** | |
| 1 | The system is notified about the success state of the submitted answer to the captcha test |
| ***Additional Information*** | |
| none | |

#### 2.3.1.15 subfunction-oeChooseInformation

| Use-Case Description | |
|---|---|
| *Name* | oeChooseInformation |
| *Scope* | system |
| *Level* | subfunction |
| ***Primary actor(s)*** | |
| 1 | `actSystem[active]` |
| ***Secondary actor(s)*** | |
| 1 | `actAuthenticated[]` |
| ***Goal(s) description*** | |
| | |
| ***Protocol condition(s)*** | |
| 1 | |
| ***Pre-condition(s)*** | |
| 1 | |
| ***Main post-condition(s)*** | |
| 1 | |
| ***Additional Information*** | |
| none | |

#### 2.3.1.16 subfunction-oeCreateAlert

| Use-Case Description | |
|---|---|
| *Name* | oeCreateAlert |
| *Scope* | system |
| *Level* | subfunction |
| ***Primary actor(s)*** | |
| 1 | `actAuthenticated[active]` |
| ***Secondary actor(s)*** | |
| 1 | `actCoordinator[]` |
| ***Goal(s) description*** | |
| | |
| ***Protocol condition(s)*** | |
| 1 | |
| ***Pre-condition(s)*** | |
| 1 | |
| ***Main post-condition(s)*** | |
| 1 | |
| ***Additional Information*** | |
| none | |

#### 2.3.1.17 subfunction-oeCreateCrisis

| Use-Case Description | |
|---|---|
| *Name* | oeCreateCrisis |
| *Scope* | system |
| *Level* | subfunction |
| ***Primary actor(s)*** | |
| 1 | `actCoordinator[active]` |
| ***Goal(s) description*** | |
| | |
| ***Protocol condition(s)*** | |
| 1 | |
| ***Pre-condition(s)*** | |
| 1 | |
| ***Main post-condition(s)*** | |
| 1 | |
| ***Additional Information*** | |
| none | |

#### 2.3.1.18 subfunction-oeNumberOfCrisis

An actor has been login as a Administrator to use the statistic function. So he can see the number of crises compared with the time

| Use-Case Description | |
|---|---|
| *Name* | oeNumberOfCrisis |
| *Scope* | system |
| *Level* | subfunction |

***continues in next page . . .***

***... Use-Case Description table continuation***

| | |
|---|---|
| ***Primary actor(s)*** | |
| 1 | `actAdministrator[active]` |
| ***Secondary actor(s)*** | |
| 1 | `actDatabase[passive]` |
| ***Goal(s) description*** | |
| An actor has been login as a Administrator to use the statistic function. So he can see the number of crises compared with the time | |
| ***Protocol condition(s)*** | |
| 1 | The actor has been login as a administrator and he has to click on the button static. |
| 2 | The actor must be able to access the system (connected to the internet) |
| ***Pre-condition(s)*** | |
| 1 | The actor is not login as a administrator, so he can click the button statistic. |
| ***Main post-condition(s)*** | |
| 1 | if the login was successful, the actor is now identified and thus able to access the AdministrateTheSystem |
| 2 | The actor can click the button statistic and so he see the statistic |
| ***Additional Information*** | |
| none | |

#### 2.3.1.19 subfunction-oeSendCaptcha

The actor responsible for captcha generation sends a captcha test and its answer to the system

| **Use-Case Description** | |
|---|---|
| *Name* | oeSendCaptcha |
| *Scope* | system |
| *Level* | subfunction |
| ***Primary actor(s)*** | |
| 1 | `actCaptchaGenerator[active]` |
| ***Secondary actor(s)*** | |
| 1 | `actCaptchaValidator[]` |
| 2 | `actAuthenticated[]` |
| ***Goal(s) description*** | |
| The actor responsible for captcha generation sends a captcha test and its answer to the system | |
| ***Protocol condition(s)*** | |
| 1 | the system has to be started |
| 2 | the captcha generator has to be available |
| ***Pre-condition(s)*** | |
| 1 | the system must have notified the actor first in order that he can generate the captcha |
| ***Main post-condition(s)*** | |
| 1 | due to the request of the system, the captcha test and its answer has been generated and sent back to the system |
| ***Additional Information*** | |
| none | |

#### 2.3.1.20 subfunction-oeSendNotification

| Use-Case Description | |
|---|---|
| *Name* | oeSendNotification |
| *Scope* | system |
| *Level* | subfunction |
| ***Primary actor(s)*** | |
| 1 | `actSystem[active]` |
| ***Goal(s) description*** | |
| | |
| ***Protocol condition(s)*** | |
| 1 | |
| ***Pre-condition(s)*** | |
| 1 | |
| ***Main post-condition(s)*** | |
| 1 | |
| ***Additional Information*** | |
| none | |

#### 2.3.1.21 subfunction-oeSendStatistic

Send the statistic to the system that the system send it to the administrator

| Use-Case Description | |
|---|---|
| *Name* | oeSendStatistic |
| *Scope* | system |
| *Level* | subfunction |
| ***Primary actor(s)*** | |
| 1 | `actSystem[active]` |
| ***Secondary actor(s)*** | |
| 1 | `actAdministrator[passive]` |
| 2 | `actDatabase[passive]` |
| ***Goal(s) description*** | |
| Send the statistic to the system that the system send it to the administrator | |
| ***Protocol condition(s)*** | |
| 1 | The actor has been login as a administrator to call the statistic so the subfunction can send the data to the system |
| ***Pre-condition(s)*** | |
| 1 | The administrator has call the statistic, so the function will send the information |
| ***Main post-condition(s)*** | |
| 1 | if the administrator click to the button statistic so the system will find the information. |
| 2 | the Database has send back the information to the system and after to the actor. |
| ***Additional Information*** | |
| none | |

#### 2.3.1.22 subfunction-oeSetCrisisHandler

goal is to declare himself as been the handler of a crisis having the specified id.

| Use-Case Description | |
|---|---|
| *Name* | oeSetCrisisHandler |
| *Scope* | system |
| *Level* | subfunction |
| ***Parameters*** | |
| AdtCrisisID: dtCrisisID 1 | |
| ***Primary actor(s)*** | |
| 1 | `actCoordinator[active]` |
| ***Secondary actor(s)*** | |
| 1 | `actCoordinator[passive]` |
| 2 | `actComCompany[passive, multiple]` |
| ***Goal(s) description*** | |
| goal is to declare himself as been the handler of a crisis having the specified id. | |
| ***Protocol condition(s)*** | |
| 1 | |
| ***Pre-condition(s)*** | |
| 1 | |
| ***Main post-condition(s)*** | |
| 1 | |
| ***Additional Information*** | |
| none | |

Figure 2.13 shows the use case diagram for the oeSetCrisisHandler subfunction use case

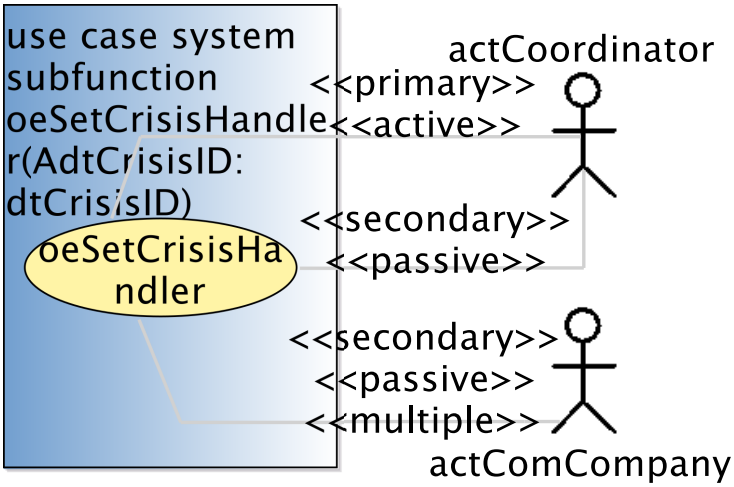

Figure 2.13: oeSetCrisisHandler subfunction use case

#### 2.3.1.23 subfunction-oeSollicitateCrisisHandling

the actActivator's goal is to decrease the number of unhandled crisis.

| Use-Case Description | |
|---|---|
| *Name* | oeSollicitateCrisisHandling |
| *Scope* | system |
| *Level* | subfunction |
| ***Primary actor(s)*** | |
| 1 | `actActivator[proactive]` |
| ***Secondary actor(s)*** | |
| 1 | `actCoordinator[passive, multiple]` |
| 2 | `actAdministrator[passive]` |
| ***Goal(s) description*** | |
| the actActivator's goal is to decrease the number of unhandled crisis. | |
| ***Protocol condition(s)*** | |
| 1 | the iCrash system has been deployed. |
| 2 | there exist some crisis still pending and for which no solicitation has been sent to the administrator and the coordinators for more than a predefined maximum delay. |
| ***Pre-condition(s)*** | |
| 1 | none |
| ***Main post-condition(s)*** | |
| 1 | a simple text message ieMessage('There are alerts not treated since more than the defined delay. Please REACT !') is sent to the system administrator and to all the coordinators of the environment for each crisis that is known to be not handled and for which no solicitation has been sent to the administrator and the coordinators for more than a predefined maximum delay.') |
| 2 | the reminder period for the concerned crisis is initialized. |

Figure 2.14 shows the use case diagram for the oeSollicitateCrisisHandling subfunction use case

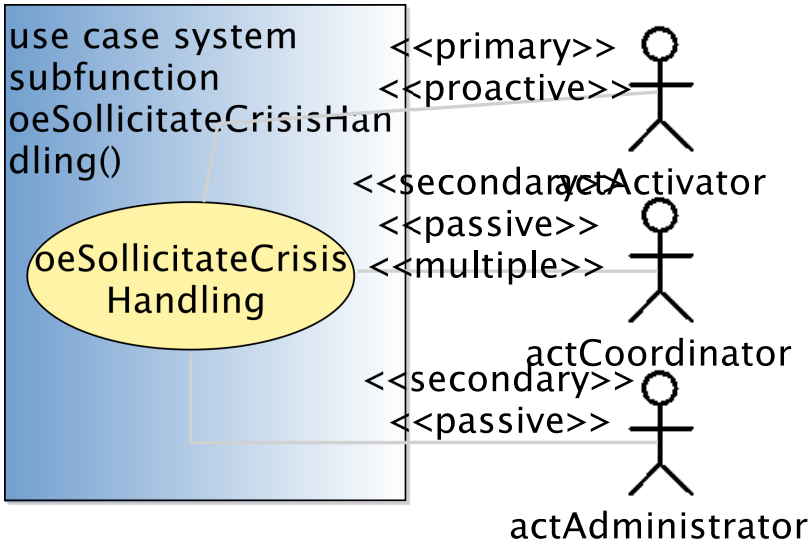

Figure 2.14: oeSollicitateCrisisHandling subfunction use case

#### 2.3.1.24 subfunction-oeStatistic

Is a new button for the administrator so he can look the different statistic

| Use-Case Description | |
|---|---|
| *Name* | oeStatistic |
| *Scope* | system |
| *Level* | subfunction |
| ***Primary actor(s)*** | |
| 1 | `actAdministrator[active]` |
| ***Secondary actor(s)*** | |
| 1 | `actSystem[passive]` |
| ***Goal(s) description*** | |
| Is a new button for the administrator so he can look the different statistic | |
| ***Protocol condition(s)*** | |
| 1 | The actor has been login as a administrator and he has to click on the button static. |
| 2 | The actor must be able to access the system (connected to the internet) |
| ***Pre-condition(s)*** | |
| 1 | The actor is not login as a administrator, so he can click the button statistic. |
| ***Main post-condition(s)*** | |
| 1 | if the login was successful, the actor is now identified and thus able to access the AdministrateTheSystem |
| 2 | The actor can click the button statistic and so he see the statistic |
| ***Additional Information*** | |
| none | |

#### 2.3.1.25 subfunction-oeSubmitCaptcha

The actor submits his answer to a captcha test to the system for validation

| Use-Case Description | |
|---|---|
| *Name* | oeSubmitCaptcha |
| *Scope* | system |
| *Level* | subfunction |
| ***Primary actor(s)*** | |
| 1 | `actAuthenticated[active]` |
| ***Secondary actor(s)*** | |
| 1 | `actCaptchaValidator[]` |
| ***Goal(s) description*** | |
| The actor submits his answer to a captcha test to the system for validation | |
| ***Protocol condition(s)*** | |
| 1 | the system has to be started |
| 2 | the actor has to be connected but not yet identified to the system |
| 3 | the system must have received first the captcha test and its answer from the actor responsible for captcha generation |
| ***Pre-condition(s)*** | |
| 1 | the actor receives the captcha test from the system |
| ***Main post-condition(s)*** | |

***continues in next page . . .***

***. . . Use-Case Description table continuation***

| | |
|---|---|
| 1 | the actor submitted an answer to the given captcha test back to the system |
| ***Additional Information*** | |
| none | |

#### 2.3.1.26 subfunction-oeTimeOfTypeOfCrisis

An actor has been login as a Administrator to use the statistic function. So he can see the average time for the different types of a crises

| USE-CASE DESCRIPTION | |
|---|---|
| *Name* | oeTimeOfTypeOfCrisis |
| *Scope* | system |
| *Level* | subfunction |
| ***Primary actor(s)*** | |
| 1 | `actAdministrator[active]` |
| ***Secondary actor(s)*** | |
| 1 | `actDatabase[passive]` |
| 2 | `actSystem[passive]` |
| ***Goal(s) description*** | |
| An actor has been login as a Administrator to use the statistic function. So he can see the average time for the different types of a crises | |
| ***Protocol condition(s)*** | |
| 1 | The actor has been login as a administrator and he has to click on the button static. |
| 2 | The actor must be able to access the system (connected to the internet) |
| ***Pre-condition(s)*** | |
| 1 | The actor is not login as a administrator, so he can click the button statistic. |
| ***Main post-condition(s)*** | |
| 1 | if the login was successful, the actor is now identified and thus able to access the AdministrateTheSystem |
| 2 | The actor can click the button statistic and so he see the statistic |
| ***Additional Information*** | |
| none | |

#### 2.3.1.27 subfunction-oeUpdateCrisis

| USE-CASE DESCRIPTION | |
|---|---|
| *Name* | oeUpdateCrisis |
| *Scope* | system |
| *Level* | subfunction |
| ***Primary actor(s)*** | |
| 1 | `actCoordinator[proactive]` |
| ***Goal(s) description*** | |
| | |
| ***Protocol condition(s)*** | |
| 1 | |
| ***Pre-condition(s)*** | |

***continues in next page . . .***

***... Use-Case Description table continuation***

| |
|---|
| 1 |
| ***Main post-condition(s)*** |
| 1 |
| ***Additional Information*** |
| none |

#### 2.3.1.28 subfunction-oeUserActivityStatistic

An actor has been login as a Administrator to use the statistic function. So he can see the number of user compared with the time

| **Use-Case Description** | |
|---|---|
| *Name* | oeUserActivityStatistic |
| *Scope* | system |
| *Level* | subfunction |
| ***Primary actor(s)*** | |
| 1 | `actAdministrator[active]` |
| ***Secondary actor(s)*** | |
| 1 | `actDatabase[passive]` |
| ***Goal(s) description*** | |
| An actor has been login as a Administrator to use the statistic function. So he can see the number of user compared with the time | |
| ***Protocol condition(s)*** | |
| 1 | The actor has been login as a administrator and he has to click on the button static. |
| 2 | The actor must be able to access the system (connected to the internet) |
| ***Pre-condition(s)*** | |
| 1 | The actor is not login as a administrator, so he can click the button statistic. |
| ***Main post-condition(s)*** | |
| 1 | if the login was successful, the actor is now identified and thus able to access the AdministrateTheSystem |
| 2 | The actor can click the button statistic and so he see the statistic |
| ***Additional Information*** | |
| none | |

#### 2.3.1.29 subfunction-ugSercurelyUserSystem

| **Use-Case Description** | |
|---|---|
| *Name* | ugSercurelyUserSystem |
| *Scope* | system |
| *Level* | subfunction |
| ***Primary actor(s)*** | |
| 1 | `actSystem[active]` |
| ***Goal(s) description*** | |
| | |
| ***Protocol condition(s)*** | |
| 1 | |

***continues in next page ...***

***. . . Use-Case Description table continuation***

### 2.3.2 Use Case Instance(s)

#### 2.3.2.1 Use-Case Instance - uciSimpleAndCompletePart01:suDeployAndRun

First part of a use case instance for the summary use case `suDeployAndRun` illustrating a simple and complete interaction scenario primarily handled by an administrator in a concrete situation.

| SUMMARY USE-CASE INSTANCE | |
|---|---|
| ***Instantiated Use Case*** | |
| suDeployAndRun | |
| ***Instance ID*** | |
| uciSimpleAndCompletePart01 | |
| ***Remarks*** | |
| a | shows the system initilization and the first administrative tasks by the administrator. |
| b | The unique and always existing `actMsrCreator` actor instance (named here `theCreator`) requests the initialization of the system and its environment (made of one administrator identified here by `bill`), one activator actor (identified by `theClock`) and indicating that the number of communication company actor instances for the system's environment is 4 (one of them is identified here by `tango`) |
| c | the administrator logs in to initialize a coordinator |
| d | an alert is received. Time is goind one without having the coordinator handling the alert which let's the proactive actor trigger the automatic sollicitation of crisis handling. |
| e | this first part stops before the coordinator logs in the system. |

Figure 2.15 shows the sequence diagram representing the first part of a simple and complete use case instance for the summary use case `suDeployAndRun`.

#### 2.3.2.2 Use-Case Instance - uciSimpleAndCompletePart02:suDeployAndRun

Second part of a simple and complete use case instance for the summary use case `suDeployAndRun` illustrating a simple and complete interaction scenario primarily handled by an administrator in a concrete situation.

| SUMMARY USE-CASE INSTANCE | |
|---|---|
| ***Instantiated Use Case*** | |
| suDeployAndRun | |
| ***Instance ID*** | |
| uciSimpleAndCompletePart02 | |
| ***Remarks*** | |
| a | starts when the coordinator logs in the system until the full handling of all the existing crisis. |
| b | shows an instantiated case of handling of a crisis by a coordinator until its closure after reporting. |

Figure 2.16 shows the sequence diagram representing the second part of a simple and complete use case instance for the summary use case `suDeployAndRun`.

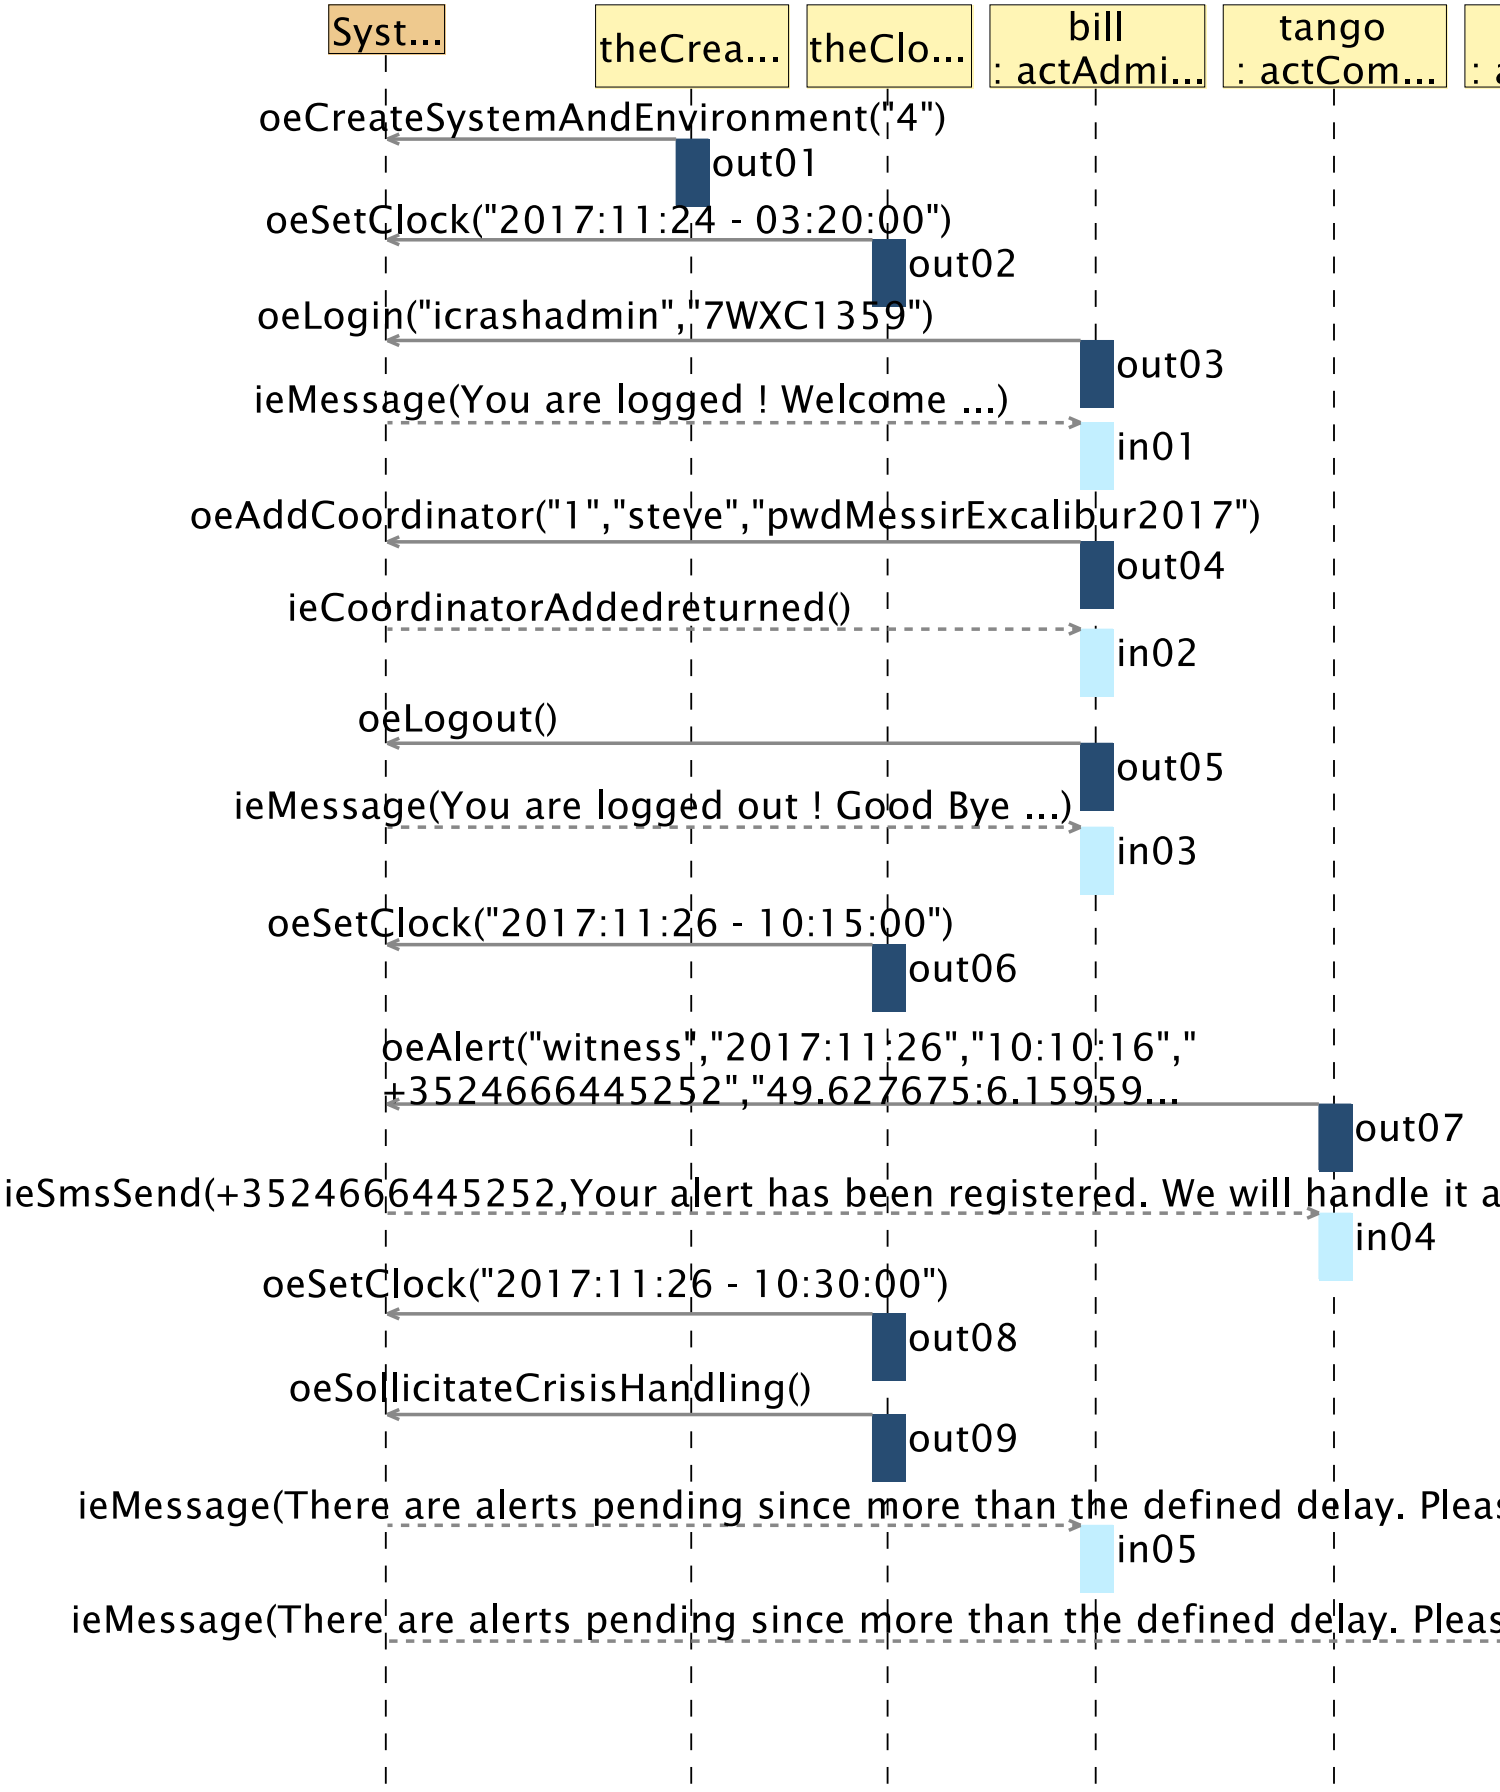

Figure 2.15: uci-suDeployAndRun-uciSimpleAndComplete-Part01

Figure 2.16: uci-suDeployAndRun-uciSimpleAndComplete-Part02 use case instance sequence diagram

#### 2.3.2.3 Use-Case Instance - uciugStatisticAverageTypeofCrisis:ugAverageTypeofCrisis

The Administrator click the button to open the statics so the system has to call the information for the average time of the different types and send it back to the Administrator so he can see it.

| USERGOAL USE-CASE INSTANCE |
|---|
| ***Instantiated Use Case***<br>ugAverageTypeofCrisis |
| ***Instance ID***<br>uciugStatisticAverageTypeofCrisis |

Figure 2.17 The Administrator click the button to open the statics so the system has to call the information for the average time of the different types and send it back to the Administrator so he can see it.

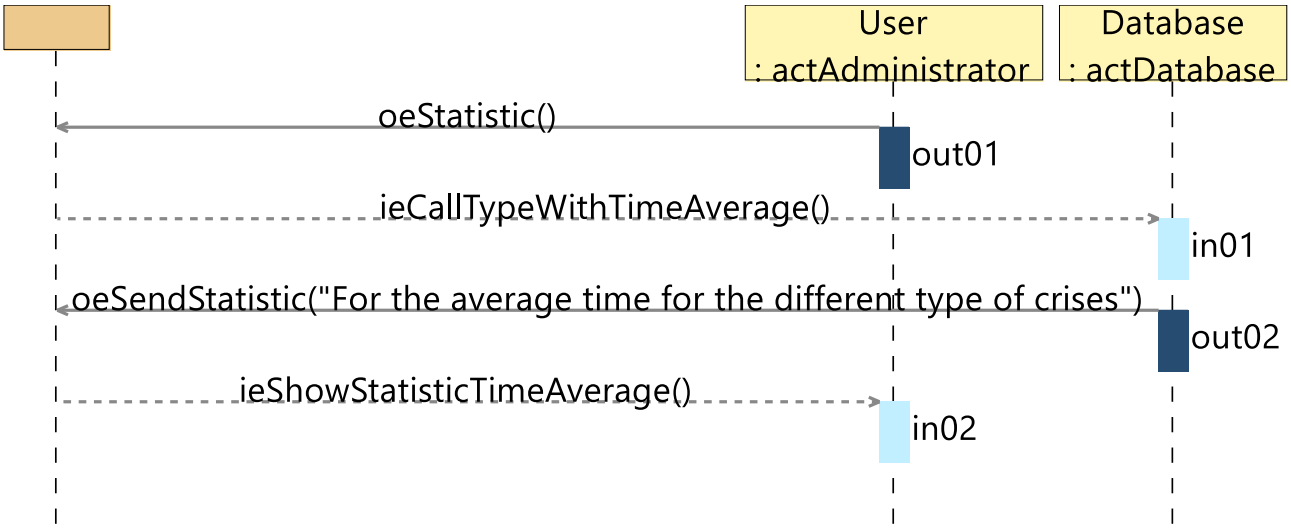

Figure 2.17: The average time of the different types

#### 2.3.2.4 Use-Case Instance - uciugStatisticCrisisInTime:ugCrisisInTime

The administrator click the button to open the statics so the system has to call the information for the number of the crises compared with the time and send it back to the Administrator so he can see it.

| USERGOAL USE-CASE INSTANCE |
|---|
| ***Instantiated Use Case***<br>ugCrisisInTime |
| ***Instance ID***<br>uciugStatisticCrisisInTime |

Figure 2.18 The administrator click the button to open the statics so the system has to call the information for the number of the crises compared with the time and send it back to the Administrator so he can see it.

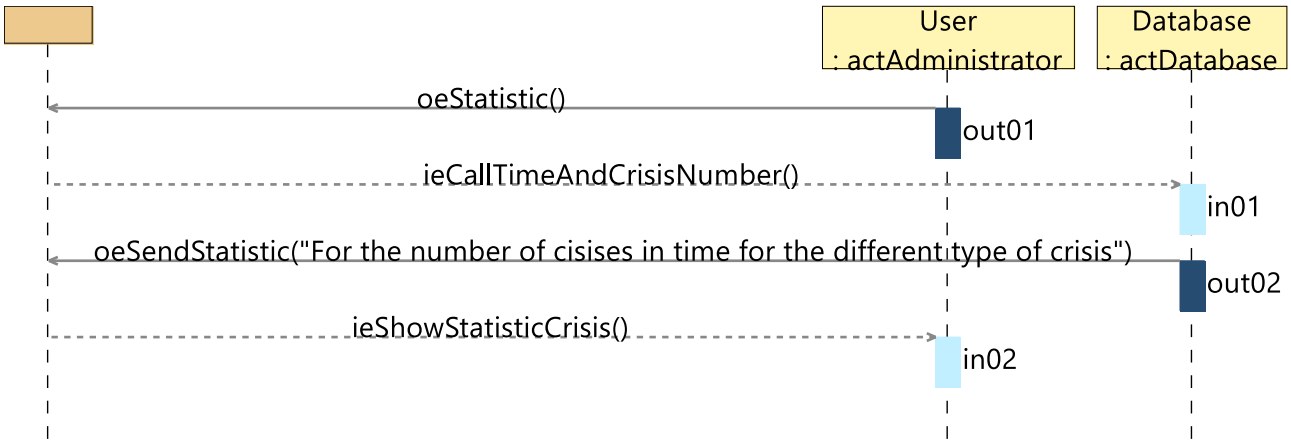

Figure 2.18: The number of the crises compared with the time

#### 2.3.2.5 Use-Case Instance - uciugLoginCaptchaFailure:ugLogin

A failed captcha response submission after at least three failed login attempts

| USERGOAL USE-CASE INSTANCE |
|---|
| ***Instantiated Use Case***<br>ugLogin |
| ***Instance ID***<br>uciugLoginCaptchaFailure |

Figure 2.19 The actor tries to log in with captcha verification and incorrect credentials. The log in process will be aborted.

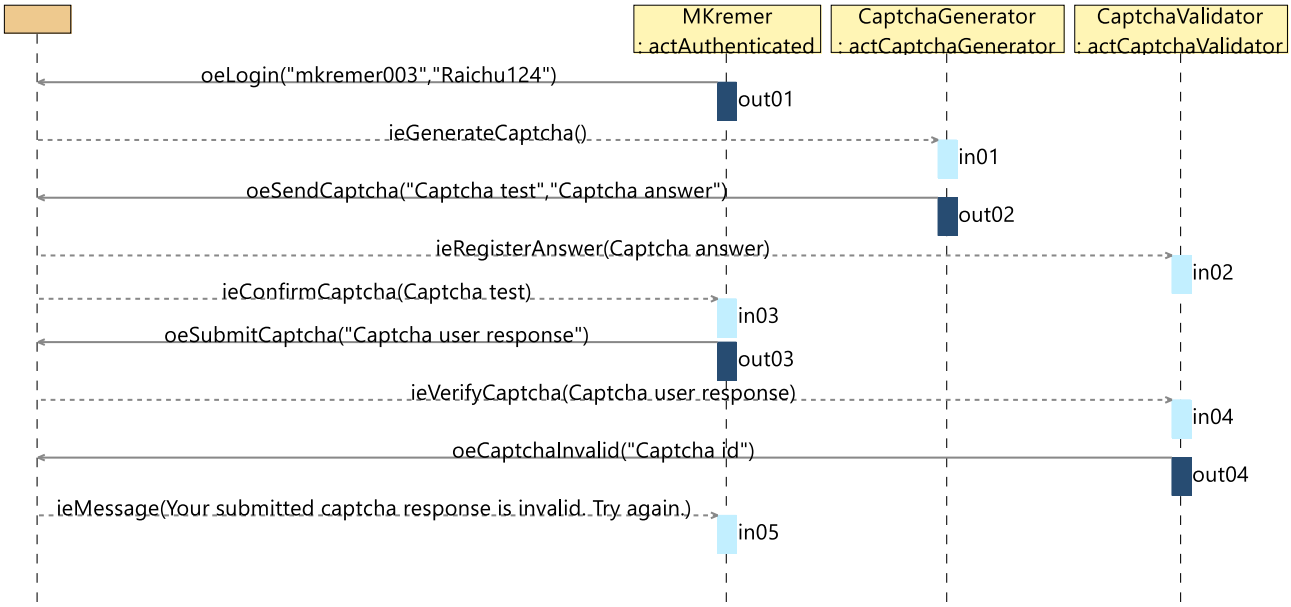

Figure 2.19: A failed login with captcha verification

#### 2.3.2.6 Use-Case Instance - uciugLoginCaptchaSuccess:ugLogin

A successful login attempt with captcha verification

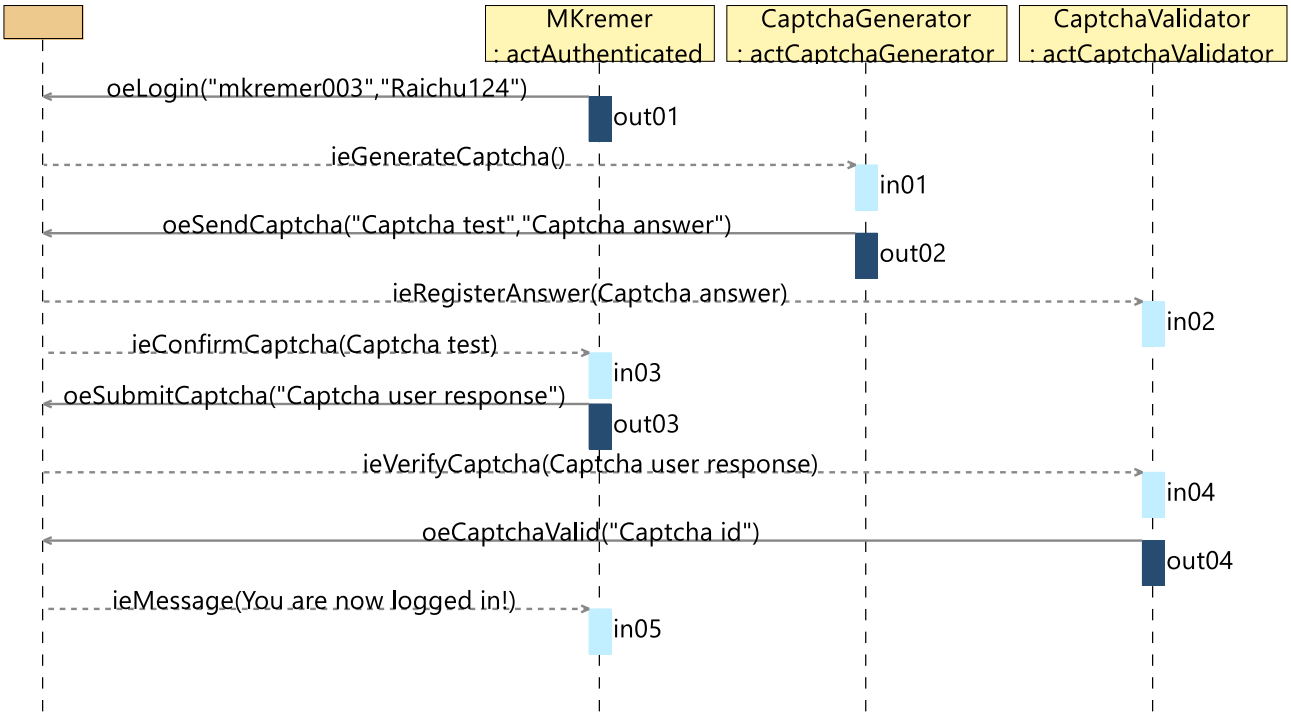

Figure 2.20: A successful login with captcha verification

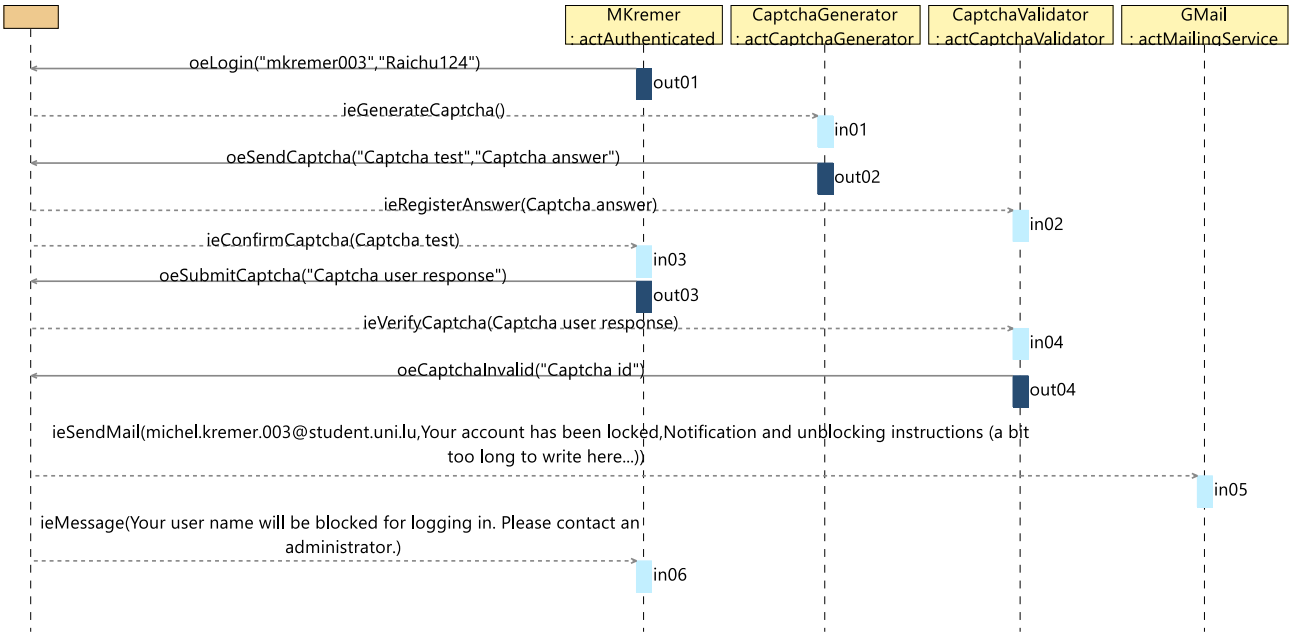
#### 2.3.2.7 Use-Case Instance - uciugLoginCaptchaToleranceExceeded:ugLogin

After three failed login attempts without and five login attempts with captcha verification, the requested login user name will be blocked for further login attempts

| USERGOAL USE-CASE INSTANCE |
|---|
| ***Instantiated Use Case***<br>ugLogin |
| ***Instance ID***<br>uciugLoginCaptchaToleranceExceeded |

Figure 2.21 The actor failed to log in three times without and five times with captcha verification. The login availability for the requested user name will be blocked.



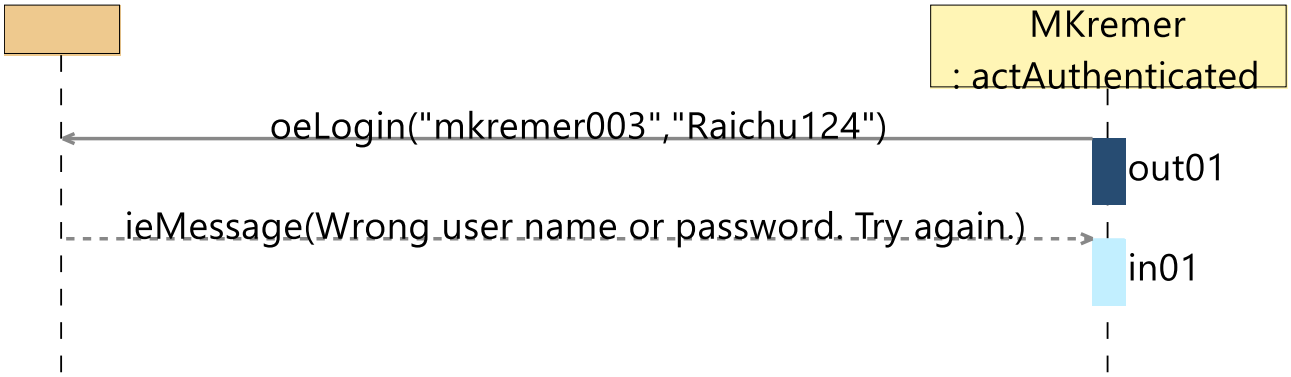


Figure 2.22: A failed login attempt

#### 2.3.2.9 Use-Case Instance - uciugLoginRejected:ugLogin

A user tried to log in with a user name which is blocked by the system (because of many erroneous attempts to log in in a row). The login attempt will be rejected and the user will be notified.

| USERGOAL USE-CASE INSTANCE |
|---|
| ***Instantiated Use Case***<br>ugLogin |
| ***Instance ID***<br>uciugLoginRejected |

Figure 2.23 A user has tried to log in with a user name who has been blocked by the system from any further login attempts

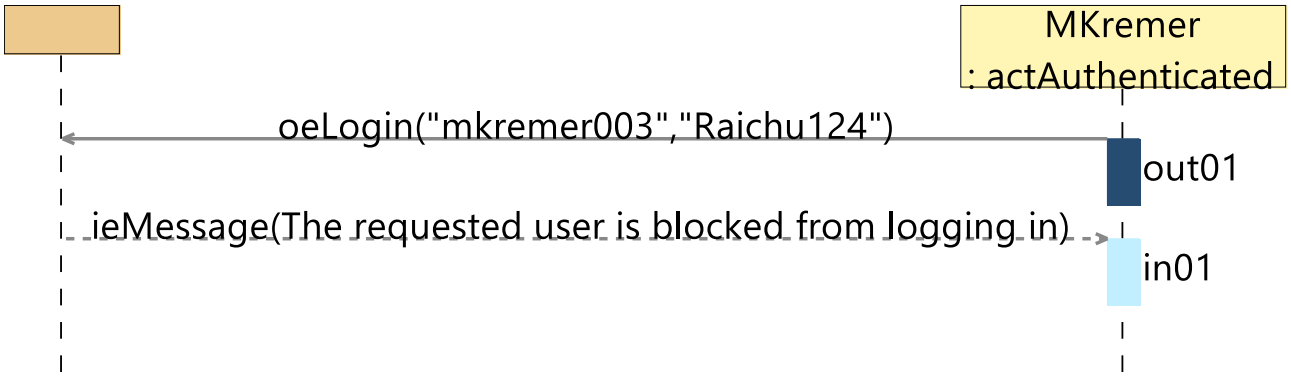

Figure 2.23: A rejected login attempt

#### 2.3.2.10 Use-Case Instance - uciugLoginSuccess:ugLogin

A successful login attempt without captcha verification

| USERGOAL USE-CASE INSTANCE |
|---|
| ***Instantiated Use Case***<br>ugLogin |
| ***Instance ID***<br>uciugLoginSuccess |

***. . . usergoal Use-Case Instance table continuation***

# Chapter 3

# Environment Model

We provide below the view(s) defined for the Messir environment model (cf. [?]) of the system.

## 3.1 Local view 01

Figure 3.1 shows the local view giving the second part of the environment model of the system in term of its state class, actors with their input and output interfaces and all related associations.

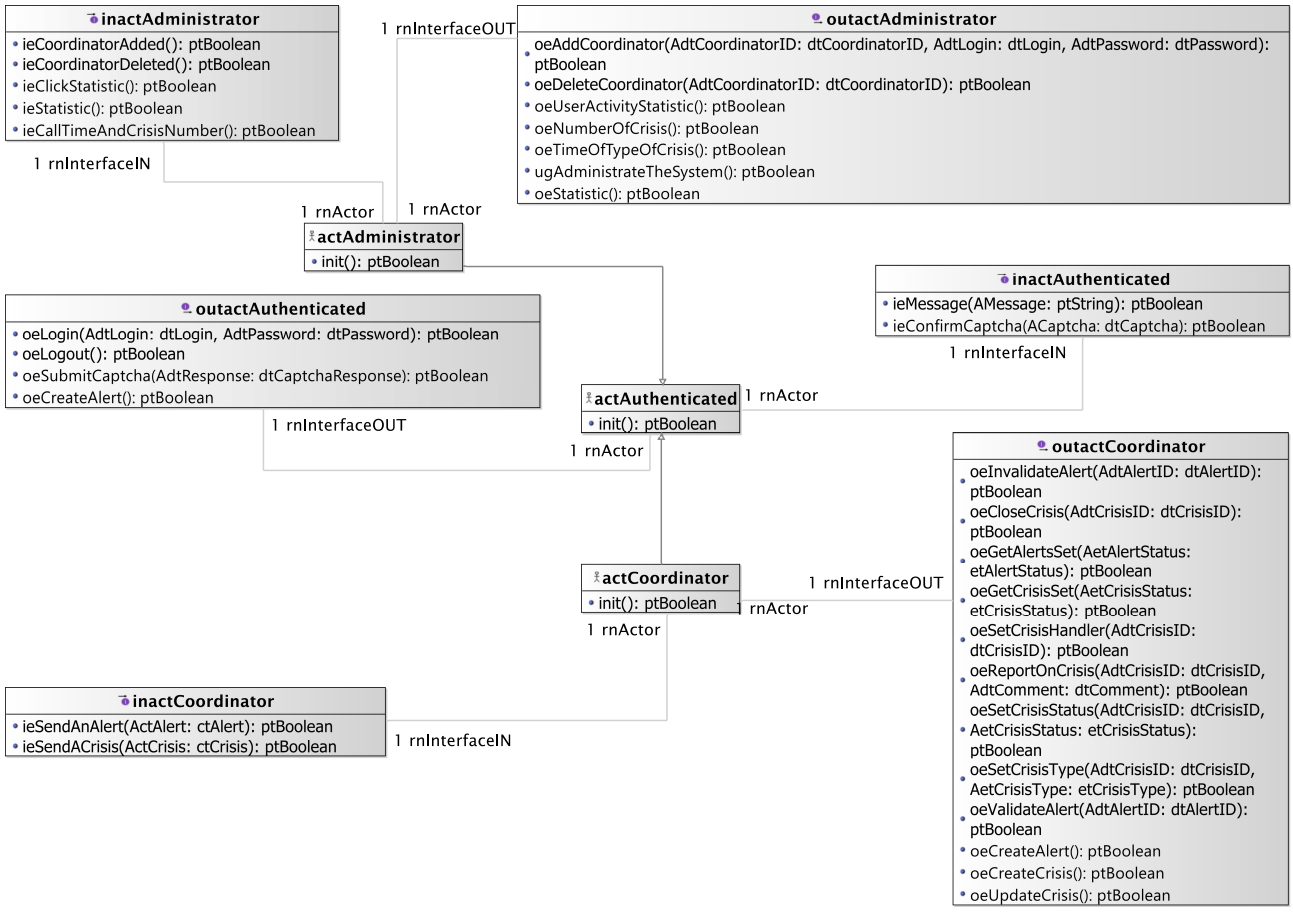

Figure 3.1: Environment Model - Local View 01. environment model local view - Part 1.

## 3.2 Local view 02

Figure 3.2 shows the local view giving the second part the environment model of the system in term of its state class, actors with their input and output interfaces and all related associations.

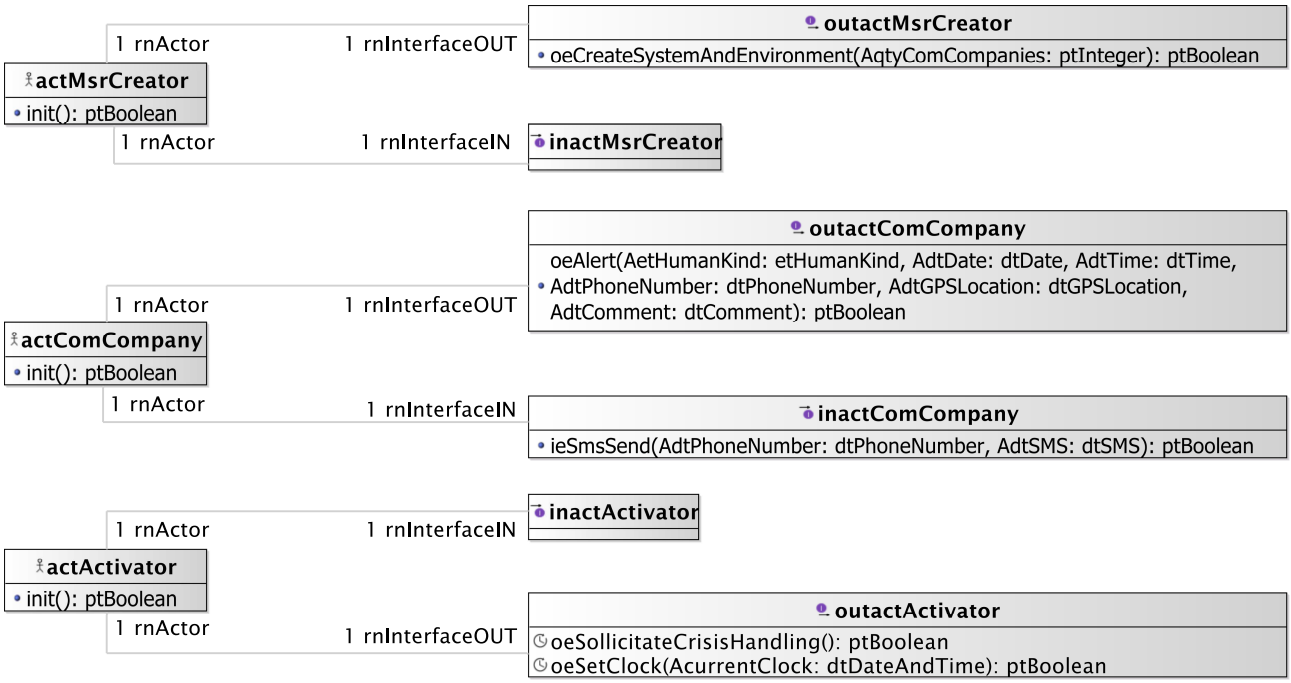

Figure 3.2: Environment Model - Local View 02. environment model local view - Part 2.

## 3.3 Local view 03

Figure 3.3 shows the local view for the administrator actor and interfaces

## 3.4 Local view 04

Figure 3.4 shows the local view for the coordinator actor and interfaces

## 3.5 Local view 05

Figure 3.5 shows the local view for the authenticated actor and interfaces

## 3.6 Local view 10

Figure 3.6

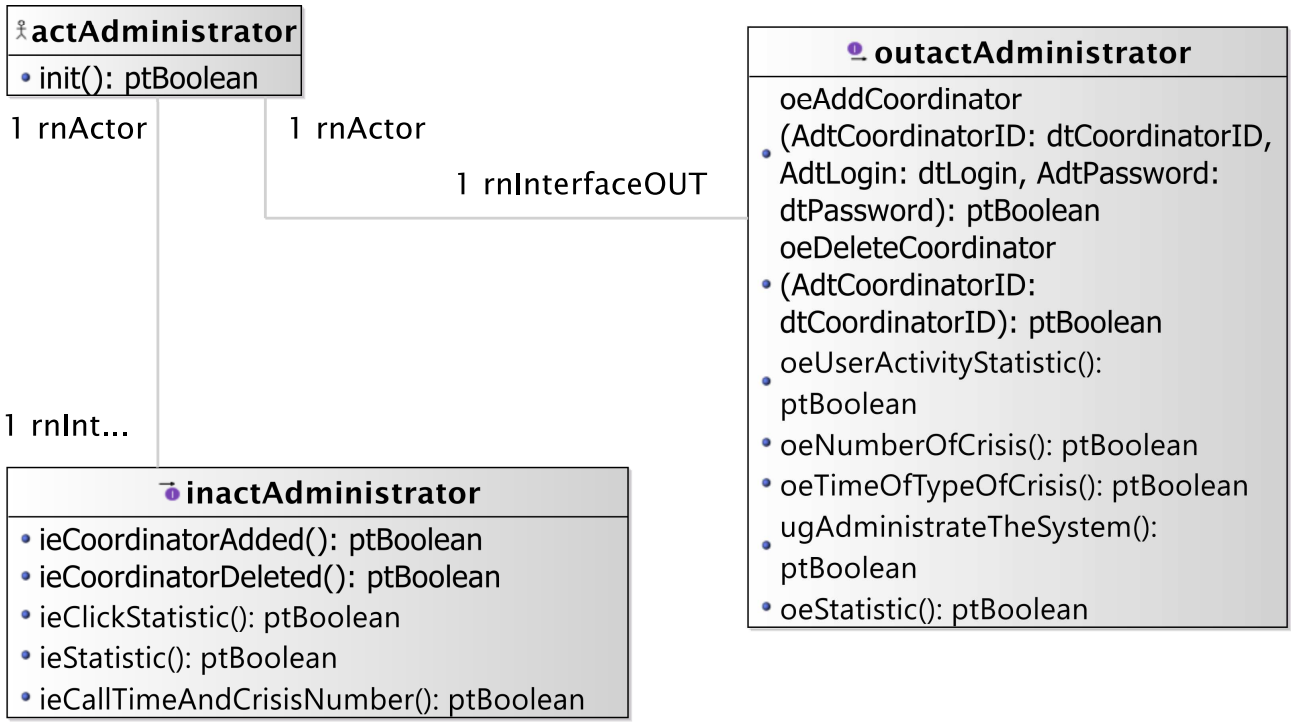

Figure 3.3: Environment Model - Local View 03. administrator actor environment model view.

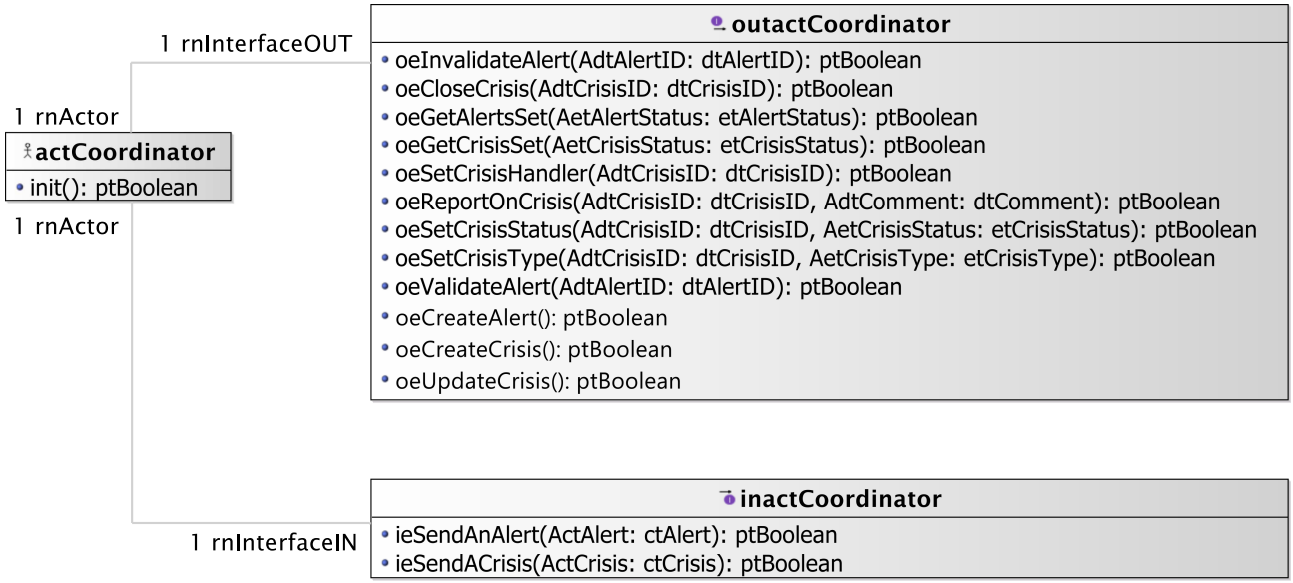

Figure 3.4: Environment Model - Local View 04. coordinator actor environment model view.

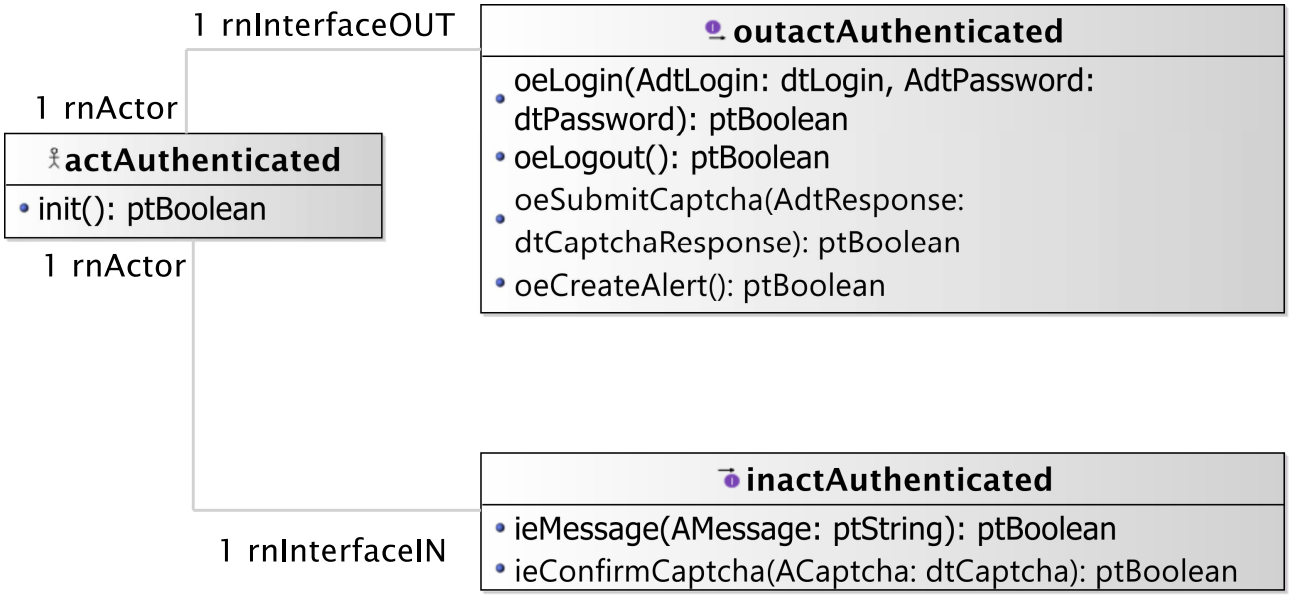

Figure 3.5: Environment Model - Local View 05. authenticated actor environment model local view.

Figure 3.6: Environment Model - Local View 10. .

## 3.7 Local view 12

Figure 3.7

Figure 3.7: Environment Model - Local View 12. .

## 3.8 Global view 01

Figure 3.8 shows a global view for all actors with their relationships with ctState

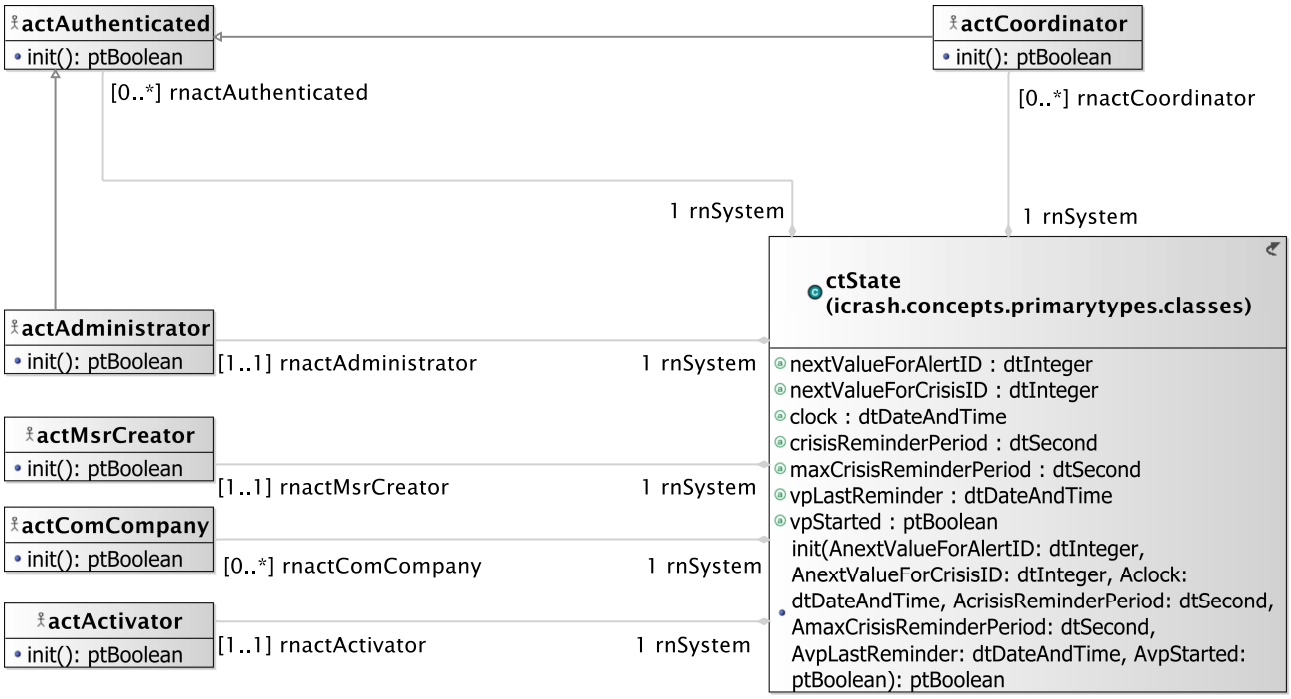

Figure 3.8: Environment Model - Global View 01. em-gv-01 environment model global view.

## 3.9 Actors and Interfaces Descriptions

We provide for the given views the description of the actors together with their associated input and output interface descriptions.

### 3.9.1 `actActivator` Actor

| ACTOR | |
|---|---|
| ***actActivator*** | |
| represents a logical actor for time automatic message sending based on system's or environment status. | |
| ***OutputInterfaces*** | |
| OUT 1 | **`[proactive] oeSollicitateCrisisHandling():ptBoolean`** used to avoid crisis to stay too long in an not handled status. |
| OUT 2 | **`[proactive] oeSetClock(AcurrentClock:dtDateAndTime):ptBoolean`** used to update the system's time |

### 3.9.2 `actAdministrator` Actor

| ACTOR |
|---|
| ***actAdministrator*** |
| represents an actor responsible of administration tasks for the *iCrash* system. |

***continues in next page . . .***

***. . . Actor table continuation***

| *Extends* |
|---|
| icrash.environment.actAuthenticated |
| *OutputInterfaces* |
| OUT 1 **oeAddCoordinator(AdtCoordinatorID:dtCoordinatorID, AdtLogin:dtLogin, AdtPassword:dtPassword):ptBoolean** sent to add a new coordinator in the system's post state and environment's post state. |
| OUT 2 **oeDeleteCoordinator(AdtCoordinatorID:dtCoordinatorID):ptBoolean** sent to delete an existing coordinator in the system's post state and environment's post state. |
| *InputInterfaces* |
| IN 1 **ieCoordinatorAdded():ptBoolean** its reception confirms the creation of the requested coodinator. |
| IN 2 **ieCoordinatorDeleted():ptBoolean** its reception confirms the deletion of the requested coodinator. |
| IN 3 **ieClickStatistic():ptBoolean** |
| IN 4 **ieStatistic():ptBoolean** |
| IN 5 **ieCallTimeAndCrisisNumber():ptBoolean** |

### 3.9.3 `actAuthenticated` Actor

| ACTOR |
|---|
| *actAuthenticated* abstract actor providing reusable input and output interfaces for actors that need to authenticate themselves. |
| *OutputInterfaces* |
| OUT 1 **oeLogin(AdtLogin:dtLogin, AdtPassword:dtPassword):ptBoolean** sent to request authorization to request access secured system operations. |
| OUT 2 **oeLogout():ptBoolean** sent to end the secured access to specific system operations. |
| OUT 3 **oeSubmitCaptcha(AdtResponse:dtCaptchaResponse):ptBoolean** sent to submit an answer to a previously given captcha test |
| OUT 4 **oeCreateAlert():ptBoolean** sent to create a new alert |
| *InputInterfaces* |
| IN 1 **ieMessage(AMessage:ptString):ptBoolean** allows for receiving general textual messages. |
| IN 2 **ieConfirmCaptcha(ACaptcha:dtCaptcha):ptBoolean** The request of the system to the user to field a captcha test |

### 3.9.4 `actCaptchaGenerator` Actor

| ACTOR |
|---|
| *actCaptchaGenerator* |

***continues in next page . . .***

***. . . Actor table continuation***

| Actor providing a randomly generated captcha test to hedge a users login process | |
|---|---|
| ***OutputInterfaces*** | |
| OUT 1 | **oeSendCaptcha(AdtCaptcha:dtCaptcha, AdtResponse:dtCaptchaResponse):ptBo**<br>The response by the actor which provides a captcha test to the system |
| ***InputInterfaces*** | |
| IN 1 | **ieGenerateCaptcha():ptBoolean**<br>The request to the actor to generate and provide a captcha test |

### 3.9.5 `actCaptchaValidator` Actor

| Actor | |
|---|---|
| ***actCaptchaValidator***<br>Actor responsible for validating a captcha test | |
| ***OutputInterfaces*** | |
| OUT 1 | **oeCaptchaInvalid(AdtCaptchaId:ptInteger):ptBoolean**<br>Returns an answer to the system to notify that the supplied captcha was invalid |
| OUT 2 | **oeCaptchaValid(AdtCaptchaId:ptInteger):ptBoolean**<br>Returns an answer to the system to notify that the supplied captcha was valid |
| ***InputInterfaces*** | |
| IN 1 | **ieVerifyCaptcha(AdtCaptchaResponse:dtCaptchaResponse):ptBoolean**<br>Submits a captcha response to the actor to be verified |

### 3.9.6 `actComCompany` Actor

| Actor | |
|---|---|
| ***actComCompany***<br>represents the communication company stakeholder ensuring the input/ouput of textual messages with humans having communicaiton devices. | |
| ***OutputInterfaces*** | |
| OUT 1 | **oeAlert(AetHumanKind:etHumanKind, AdtDate:dtDate, AdtTime:dtTime, AdtPhoneNumber:dtPhoneNumber, AdtGPSLocation:dtGPSLocation, AdtComment:dtComment):ptBoolean**<br>sent to alert of a potential crisis situation. |
| ***InputInterfaces*** | |
| IN 1 | **ieSmsSend(AdtPhoneNumber:dtPhoneNumber, AdtSMS:dtSMS):ptBoolean**<br>allows for receiving textual messages to be dispatched to the communication company customers having the provided phone number. |

### 3.9.7 `actCoordinator` Actor

| Actor |
|---|
| ***actCoordinator***<br>represents actor responsible of handling one or several crisis for the *iCrash* system. |
| ***Extends*** |
| icrash.environment.actAuthenticated |

***continues in next page . . .***

***. . . Actor table continuation***

| *OutputInterfaces* | |
|---|---|
| OUT 1 | **oeInvalidateAlert(AdtAlertID:dtAlertID):ptBoolean**<br>sent to indicate that an alert should be considered as closed. |
| OUT 2 | **oeCloseCrisis(AdtCrisisID:dtCrisisID):ptBoolean**<br>sent to indicate that a crisis should be considered as closed. |
| OUT 3 | **oeGetAlertsSet(AetAlertStatus:etAlertStatus):ptBoolean**<br>sent to request all the ctAlert instances having a specific status. |
| OUT 4 | **oeGetCrisisSet(AetCrisisStatus:etCrisisStatus):ptBoolean**<br>sent to request all the ctCrisis instances having a specific status. |
| OUT 5 | **oeSetCrisisHandler(AdtCrisisID:dtCrisisID):ptBoolean**<br>sent to declare himself as been the handler of a crisis having the specified id. |
| OUT 6 | **oeReportOnCrisis(AdtCrisisID:dtCrisisID, AdtComment:dtComment):ptBoolean**<br>sent to update the textual information available for a specific handled crisis. |
| OUT 7 | **oeSetCrisisStatus(AdtCrisisID:dtCrisisID, AetCrisisStatus:etCrisisStatus):p**<br>sent to define the handling status of a specific crisis. |
| OUT 8 | **oeSetCrisisType(AdtCrisisID:dtCrisisID, AetCrisisType:etCrisisType):ptBoole**<br>sent to define the gravity type of a specific crisis. |
| OUT 9 | **oeValidateAlert(AdtAlertID:dtAlertID):ptBoolean**<br>sent to indicate that a specific alert is not a fake. |
| OUT 10 | **oeCreateAlert():ptBoolean** |
| OUT 11 | **oeCreateCrisis():ptBoolean** |
| OUT 12 | **oeUpdateCrisis():ptBoolean** |
| *InputInterfaces* | |
| IN 1 | **ieSendAnAlert(ActAlert:ctAlert):ptBoolean**<br>allows for receiving a requested ctAlert instance. |
| IN 2 | **ieSendACrisis(ActCrisis:ctCrisis):ptBoolean**<br>allows for receiving a requested ctCrisis instance. |

### 3.9.8 `actDatabase` Actor

| ACTOR | |
|---|---|
| *actDatabase* | |
| *InputInterfaces* | |
| IN 1 | **ieCallTimeAndCrisisNumber():ptBoolean** |
| IN 2 | **ieCallUserActivity():ptBoolean** |
| IN 3 | **ieCallTypeWithTimeAverage():ptBoolean** |
| IN 4 | **oeSendStatistic():ptBoolean** |
| IN 5 | **oeStatistic():ptBoolean** |

### 3.9.9 `actMailingService` Actor

| Actor |
|---|
| *actMailingService*<br>An actor who is responsible for sending mails to actors who are registered in the system with an e-mail address |
| *InputInterfaces* |
| IN 1 **`ieSendMail(AAddress:ptString, ATitle:ptString, AContent:ptString):ptBoolean`**<br>Sends an e-mail to a given e-mail address |

### 3.9.10 `actMsrCreator` Actor

| Actor |
|---|
| *actMsrCreator*<br>Represents the creator stakeholder in charge of state and environment initialization. |
| *OutputInterfaces* |
| OUT 1 **`oeCreateSystemAndEnvironment(AqtyComCompanies:ptInteger):ptBoolean`**<br>sent to request the initialization of the system's class instances and the environment actors instances. |

### 3.9.11 `actSystem` Actor

| Actor |
|---|
| *actSystem* |
| *OutputInterfaces* |
| OUT 1 **`ugSercurelyUserSystem():ptBoolean`** |
| OUT 2 **`ugVictimSendFamilyNotification():ptBoolean`** |
| OUT 3 **`ugWitnessSendFamilyNotification():ptBoolean`** |
| OUT 4 **`oeChooseInformation():ptBoolean`** |
| OUT 5 **`oeSendNotification():ptBoolean`** |
| OUT 6 **`oeSendStatistic():ptBoolean`** |
| *InputInterfaces* |
| IN 1 **`ieCallTimeAndCrisisNumber():ptBoolean`** |
| IN 2 **`ieCallUserActivity():ptBoolean`** |
| IN 3 **`ieCallTypeWithTimeAverage():ptBoolean`** |

## 4.4 Concept Model Types Descriptions

This section provides the textual descriptions of all the types defined in the concept model and that can be part of the graphical views provided.

### 4.4.1 Primary types - Class types descriptions

The table below is providing comments on the graphical views given for the class types of the primary types. Type logical operations are precisely specified in the operation model.

| CLASSES | |
|---|---|
| ***ctAdministrator*** | |
| used to caracterize internally the entity that is responsible of administrating the *iCrash* system. | |
| *extends* | icrash.concepts.primarytypes.classes.ctAuthenticated |
| operation | **init(Alogin:dtLogin, Apwd:dtPassword):ptBoolean**<br>used to initialize the current object as a new instance of the ctAdministrator type. |
| ***ctAlert*** | |
| Used to model crisis alerts sent by any human having communication capability using communication companies belonging to the system's environment | |
| attribute | **comment: dtComment**<br>a textual description providing unstructured information on the alert. |
| attribute | **id: dtAlertID**<br>the alert unique identification information. |
| attribute | **instant: dtDateAndTime**<br>the date and time at which the alert notification has been sent. |
| attribute | **location: dtGPSLocation**<br>the position of the alert provided by the space-based satellite navigation system used by the human using the communication company to inform the *iCrash* system of a crisis. |
| attribute | **status: etAlertStatus**<br>the alert validation status |
| operation | **init(Aid:dtAlertID, Astatus:etAlertStatus, Alocation:dtGPSLocation, Ainstant:dtDateAndTime, Acomment:dtComment):ptBoolean**<br>used to initialize the current object as a new instance of the ctAlert type. |
| operation | **isSentToCoordinator(AactCoordinator:actCoordinator):ptBoolean**<br>used to provide a given coordinator with current alert information. |

***continues in next page . . .***

***. . . Classes table continuation***

| | |
|---|---|
| ***ctAuthenticated*** | |
| used to model system's representation about actors that need to authenticate to access some specific functionalities. | |
| attribute | **login: dtLogin** |
| | an identifier for authentication. |
| attribute | **pwd: dtPassword** |
| | a key for authentication. |
| attribute | **vpIsLogged: ptBoolean** |
| | used to determine the access status. |
| operation | **init(Alogin:dtLogin, Apwd:dtPassword):ptBoolean** |
| | used to initialize the current object as a new instance of the ctAuthenticated type. |
| ***ctCaptchaGenerator*** | |
| operation | **init():ptBoolean** |
| ***ctCaptchaValidator*** | |
| operation | **init():ptBoolean** |
| ***ctCoordinator*** | |
| used to model system's representation about the actors that have the responsibility to handle alerts and crisis. | |
| *extends* | icrash.concepts.primarytypes.classes.ctAuthenticated |
| attribute | **id: dtCoordinatorID** |
| | a unique identification information. |
| operation | **init(Aid:dtCoordinatorID, Alogin:dtLogin, Apwd:dtPassword):ptBoolean** |
| | used to initialize the current object as a new instance of the ctCoordinator type. |
| ***ctCrisis*** | |
| Used to model crisis that are infered from the reception of at least one alert message. Crisis aer entities that are handled by the *iCrash* system. | |
| attribute | **comment: dtComment** |
| | a textual description providing unstructured information on the crisis handling. |
| attribute | **id: dtCrisisID** |
| | the crisis unique identification information. |
| attribute | **instant: dtDateAndTime** |
| | the date and time at which the first related alert notification has been sent. |
| attribute | **location: dtGPSLocation** |
| | the position of the crisis equal by the one of the first alert received and associated to the crisis. |
| attribute | **status: etCrisisStatus** |
| | the crisis handling status. |
| attribute | **type: etCrisisType** |
| | an indication of the gravity of the crisis. |
| operation | **handlingDelayPassed():ptBoolean** |
| | used to determine if the crisis stood too longly in a pending status since last reminder. |

***continues in next page . . .***

***. . . Classes table continuation***

| | |
|---|---|
| operation | **init(Aid:dtCrisisID, Atype:etCrisisType, Astatus:etCrisisStatus, Alocation:dtGPSLocation, Ainstant:dtDateAndTime, Acomment:dtComment):ptBoolean**<br>used to initialize the current object as a new instance of the ctAlert type. |
| operation | **isAllocatedIfPossible():ptBoolean**<br>used to allocate a crisis to a coordinator if any or to alert the administrator of crisis waiting to be handled. |
| operation | **isSentToCoordinator(AactCoordinator:actCoordinator):ptBoolean**<br>used to provide a given coordinator with current crisis information. |
| operation | **maxHandlingDelayPassed():ptBoolean**<br>used to determine if the crisis stood too longly in a pending status since its creation. |
| ***ctHuman*** | |
| used to model system's representation about the indirect actors that has alerted of potential crisis. | |
| attribute | **id: dtPhoneNumber**<br>the number of the communication device used to send an alert to *iCrash* system. |
| attribute | **kind: etHumanKind**<br>role with respect to the alert notified. |
| operation | **init(Aid:dtPhoneNumber, Akind:etHumanKind):ptBoolean**<br>`init`: used to initialize the current object as a new instance of the ctHuman type. |
| ***ctMailingService*** | |
| operation | **init():ptBoolean** |
| ***ctState*** | |
| used to model the system. Each system specified using Messir must include a ctState class for which there is only one instance at any state of the abstract machine after creation. | |
| attribute | **clock: dtDateAndTime**<br>used to represent the system local time. |
| attribute | **crisisReminderPeriod: dtSecond**<br>used to define the delay between two reminders after which a reminder must be sent to the administrator and to the known coordinators to encourage them to handle the crisis. |
| attribute | **maxCrisisReminderPeriod: dtSecond**<br>used to define the maximum delay after which the crisis is ramdomly allocated to a coordinator if any or an alert message is sent to the administrator in order to encourage him to add coordinators. |
| attribute | **nextValueForAlertID: dtInteger**<br>`nextValueForAlertID: dtInteger`: used to associate each alert declared with a unique idenitification value. |
| attribute | **nextValueForCrisisID: dtInteger**<br>used to associate each crisis declared with a unique idenitification value. |
| attribute | **vpLastReminder: dtDateAndTime**<br>date and time of the last reminder. |
| attribute | **vpStarted: ptBoolean**<br>used to avoid reacting to an actor message if the system is not started (i.e. oeCreateSystemAndEnvironment not executed). |

***continues in next page . . .***

***. . . Classes table continuation***

| | |
|---|---|
| operation | **init(AnextValueForAlertID:dtInteger, AnextValueForCrisisID:dtInteger, Aclock:dtDateAndTime, AcrisisReminderPeriod:dtSecond, AmaxCrisisReminderPeriod:dtSecond, AvpLastReminder:dtDateAndTime, AvpStarted:ptBoolean):ptBoolean**<br>used to initialize the current object as a new instance of the ctState type. |

### 4.4.2 Primary types - Datatypes types descriptions

The table below is providing comments on the graphical views given for the datatype types of the primary types.

| DATATYPES | |
|---|---|
| ***dtAlertID*** | |
| A string used to identify alerts. | |
| *extends* | dtString |
| operation | **is():ptBoolean**<br>used to determine which strings are considered as valid alert identifiers. |
| ***dtCaptcha*** | |
| Contains the actual representation of an image based captcha test | |
| attribute | **id: dtCaptchaId**<br>The internal id of this captcha test. This is used for the actCaptchaGenerator to identify the captcha test in case of a response. |
| attribute | **question: ptString**<br>The human readable question related to this captcha test, needed by a human to be able to solve the captcha test |
| ***dtCaptchaId*** | |
| *extends* | dtInteger |
| ***dtCaptchaImage*** | |
| The actual representation of an image related to a captcha test. The inheritance from dtString allows to store the binary data of the image as bytes in string format. | |
| *extends* | dtString |
| attribute | **height: dtInteger**<br>Represents the height of the image in pixels |
| attribute | **width: dtInteger**<br>Represents the width of the image in pixels |
| ***dtCaptchaResponse*** | |
| Contains the users response to a given captcha test | |
| attribute | **id: dtCaptchaId**<br>The internal id which qualifies the related captcha test |
| attribute | **response: ptString**<br>The response data given by the user |
| ***dtCaptchaResponseMap*** | |
| A data structure which hold references to correct answers, each one related to one captcha test. This data structure maps an id number to at last one answer. | |
| operation | **get(AId:dtCaptchaId):dtCaptchaResponse**<br>Gets the answer of the mapping from the given id |
| operation | **is():ptBoolean** |

***continues in next page . . .***

***... Datatypes table continuation***

| | |
|---|---|
| | Verifies if this map is a valid data structure |
| operation | **`register(AdtResponse:dtCaptchaResponse):ptBoolean`** |
| | Saves an answer to a captcha test to this data structure |
| operation | **`remove(AId:dtCaptchaId):ptBoolean`** |
| | Removes the reference to an answer from this data structure by the given id number |
| ***dtComment*** | |
| a datatype made of a string value used to receive,store and send textual information about crisis and alerts. | |
| *extends* | dtString |
| operation | **`is():ptBoolean`** |
| | used to determine which strings are considered as valid comments. |
| ***dtCoordinatorID*** | |
| A string used to identify coordinators. | |
| *extends* | dtString |
| operation | **`is():ptBoolean`** |
| | used to determine which strings are considered as valid coordinators identifiers. |
| ***dtCrisisID*** | |
| A string used to identify crisis. | |
| *extends* | dtString |
| operation | **`is():ptBoolean`** |
| | used to determine which strings are considered as valid crisis identifiers. |
| ***dtGPSLocation*** | |
| used to define coordinates of geograpical positions on earth. It is defined a couple made of a latitude and a longitude. | |
| attribute | **`latitude: dtLatitude`** |
| | for the latitude part of the coordinate. |
| attribute | **`longitude: dtLongitude`** |
| | for the longitude part of the coordinate. |
| operation | **`is():ptBoolean`** |
| | used to determine which couples are considered as valid dtGPSLocation values. |
| operation | **`isNearTo(AGPSLocation:dtGPSLocation):ptBoolean`** |
| | used to determine if locations are considered enough close to be treated as equivalent in the application domain context. |
| ***dtLatitude*** | |
| used to define a latitude value of a geograpical positions on earth. | |
| *extends* | dtReal |
| operation | **`is():ptBoolean`** |
| | used to determine which strings are considered as valid dtLatitude. |
| ***dtLogin*** | |
| a login string used to authentify an *iCrash* user | |
| *extends* | dtString |
| operation | **`is():ptBoolean`** |
| | used to determine which strings are considered as valid dtLogin. |
| ***dtLongitude*** | |
| used to define a longitude value of a geograpical positions on earth. | |
| *extends* | dtReal |
| operation | **`is():ptBoolean`** |

***continues in next page ...***

***. . . Datatypes table continuation***

| | |
|---|---|
| | used to determine which strings are considered as valid dtLongitude. |
| ***dtPassword*** | |
| a password string used to authentify an *iCrash* user | |
| *extends* | dtString |
| operation | **is():ptBoolean** |
| | used to determine which strings are considered as valid dtPassword. |
| ***dtPhoneNumber*** | |
| a string used to store the phone number from the human declaring the crisis or the alert. | |
| *extends* | dtString |
| operation | **is():ptBoolean** |
| | used to determine which strings are considered as valid dtPhoneNumber. |
| ***dtStatisticCrisisinTime*** | |
| Statistic representing a number of crises compared with a specific timespan | |
| attribute | **number: ptInteger** |
| | The amount of crises |
| attribute | **time: dtTime** |
| | The related timestamp |
| ***dtStatisticTypeCrisis*** | |
| Show what the attribute for the static the average time of the different crises | |
| attribute | **time: dtTime** |
| | The related timestamp representing the date |
| attribute | **typeC: ptString** |
| | The type of the crisis |
| ***dtStatisticUserActivity*** | |
| Represents a statistic of a number of users in relation to a specific timespan | |
| attribute | **number: ptInteger** |
| | The amount of involved users |
| attribute | **time: dtTime** |
| | The related timestamp |

| ENUMERATIONS | |
|---|---|
| ***etAlertStatus*** | |
| this type is used to indicate the different validation status of an alert. | |
| operation | **is():ptBoolean** |
| | used to determine which litteral belongs to the enumeration. |
| ***etCrisisStatus*** | |
| this type is used to indicate the different handling status of a crisis. | |
| operation | **is():ptBoolean** |
| | used to determine which litteral belongs to the enumeration. |
| ***etCrisisType*** | |
| this type is used to indicate the different types of a crisis. | |
| operation | **is():ptBoolean** |
| | used to determine which litteral belongs to the enumeration. |
| ***etHumanKind*** | |
| this type is used to indicate the kind of human that informs about a car crash crisis. | |
| operation | **is():ptBoolean** |

***continues in next page . . .***

***... Enumerations table continuation***

| | |
|---|---|
| | used to determine which litteral belongs to the enumeration. |

### 4.4.3 Primary types - Association types descriptions

The table below is providing comments on the association types of the primary types.

| Undirected associations |
|---|
| ***assctAlertctCrisis***<br>a crisis is related to one or more alerts as the alerts judged to concern all the same crisis due to their location. An alert alerts exactly one crisis. |
| ***assctAlertctHuman***<br>alerts are notified by human through the communication company. We need to keep an internal representation of those human to allow for communication of alert handling. |
| ***assctAuthenticatedactAuthenticated***<br>mainly used to determine if the login request of an authenticated actor can be granted based on the given credentials and the registered ones. |
| ***assctCoordinatoractCoordinator***<br>frequent messages must be sent to coordinator especially in relation to crisis they handle. |
| ***assctCrisisctCoordinator***<br>at any point in time we need to know if a coordinator is handling existing crisis or not. |
| ***assctHumanactComCompany***<br>in order to communicate with humans who informed about potential crisis, we need to record the communication company to use to send them messages. |

### 4.4.4 Primary types - Aggregation types descriptions

There are no aggregation types for the primary types.

#### 4.4.4.1 Primary types - Composition types descriptions

There are no composition types for the primary types.

### 4.4.5 Secondary types - Class types descriptions

There are no elements in this category in the system analysed.

### 4.4.6 Secondary types - Datatypes types descriptions

The table below is providing comments on the graphical views given for the datatype types of the secondary types.

| Datatypes | |
|---|---|
| ***dtSMS***<br>a datatype made of a string value used to send textual information to human mobile devices. | |
| attribute | **`value: ptString`**<br>the textual information. |
| operation | **`is():ptBoolean`**<br>used to determine which strings are considered as valid comments. |

### 4.4.7 Secondary types - Association types descriptions

There are no association types for the secondary types.

### 4.4.8 Secondary types - Aggregation types descriptions

There are no aggregation types for the secondary types.

### 4.4.9 Secondary types - Composition types descriptions

There are no composition types for the secondary types.

# Chapter 5

# Operation Model

This section contains the operation schemes of each operation defined in either an actor, its output interface, in a primary or secondary type (class, datatype or enumeration types). The Messir OCL code listing is joined to the comment table.

## 5.1 Environment - Out Interface Operation Scheme for actActivator

### 5.1.1 Operation Model for oeSetClock

The `oeSetClock` operation has the following properties:

| Operation | |
|---|---|
| ***oeSetClock[proactive]*** | |
| An active message used to statically set the date and time information in the system's state. | |
| ***Parameters*** | |
| 1 | **AcurrentClock: dtDateAndTime**<br>the date and time to be considered as the actual one. |
| ***Return type*** | |
| ptBoolean | |
| ***Pre-Condition (protocol)*** | |
| PreP 1 | the system is supposed to be created and initialized and the provided date and time value is greater than the one known by the system. |
| ***Pre-Condition (functional)*** | |
| PreF 1 | none |
| ***Post-Condition (functional)*** | |
| PostF 1 | the ctState instance post-state is updated to have its clock attribute equal to the given date and time. |
| ***Post-Condition (protocol)*** | |
| PostP 1 | none |

The listing 5.1 provides the Messir (MCL-oriented) specification of the operation.

```
1
2 /* Pre Protocol:*/
3 preP{let TheSystem: ctState in
```

```
4   let AvpStarted: ptBoolean in
5
6  /* PreP01 */
7   self.rnActor.rnSystem = TheSystem
8   and self.rnActor.rnSystem.vpStarted = AvpStarted
9   and AvpStarted = true
10  and TheSystem.clock.lt(AcurrentClock)}
11
12 /* Pre Functional:*/
13 preF{true}
14
15 /* Post Functional:*/
16 postF{let TheSystem: ctState in
17  self.rnActor.rnSystem = TheSystem
18
19 /* PostF01 */
20  and TheSystem@post.clock = AcurrentClock}
21
22 /* Post Protocol:*/
23 postP{ true}
```

Listing 5.1: Messir (MCL-oriented) specification of the operation *oeSetClock*.

### 5.1.2 Operation Model for oeSollicitateCrisisHandling

The `oeSollicitateCrisisHandling` operation has the following properties:

| **Operation** | |
|---|---|
| ***oeSollicitateCrisisHandling[proactive]*** A proactive message (message of a pro-active actor with no parameter triggered automatically if the pre protocol condition is true) used to avoid crisis to stay too long in an not handled status. | |
| ***Return type*** | |
| ptBoolean | |
| ***Pre-Condition (protocol)*** | |
| PreP 1 | the system is started |
| PreP 2 | there exist some crisis that are in pending status and for which the duration between the current ctState clock information and the last reminder is greater than the crisis reminder period duration. |
| ***Pre-Condition (functional)*** | |
| PreF 1 | none |
| ***Post-Condition (functional)*** | |
| PostF 1 | if there exist coordinators and crisis who stood in a not handled status more than the maximum allowed time then those crisis are randomly allocated to the existing coordinators. |
| PostF 2 | for all other crisis who stood too longly in a not handled status but not more than the maximum delay allowed then a reminder message is sent to the administrator and all coordinator actors of the environment to sollicitate handling of those crisis. |
| ***Post-Condition (protocol)*** | |
| PostP 1 | the value of the last reminder known by the system at post state is the system's clock value. |

The listing 5.2 provides the Messir (MCL-oriented) specification of the operation.

```
1
2 /* Pre Protocol:*/
```

```
preP{let TheSystem: ctState in
 let AvpStarted: ptBoolean in
 let ColctCrisisToHandle:
    Bag(ctCrisis) in

 self.rnActor.rnSystem = TheSystem

/* PreP01 */
 and TheSystem.vpStarted

/* PreP02 */
 and TheSystem.rnctCrisis->select(handlingDelayPassed())
   = ColctCrisisToHandle
 and ColctCrisisToHandle->size().geq(1)}

/* Pre Functional:*/
preF{true}

/* Post Functional:*/
postF{let TheSystem: ctState in
 let AMessageForCrisisHandlers: dtComment in
 let ColctCrisisToAllocateIfPossible:Bag(ctCrisis) in

 self.rnActor.rnSystem = TheSystem
/* PostF01 */
 and TheSystem.rnctCrisis->select(maxHandlingDelayPassed())
   = ColctCrisisToAllocateIfPossible
 and ColctCrisisToAllocateIfPossible->forAll(isAllocatedIfPossible())

 /* PostF02 */
 and TheSystem.rnctCrisis->select(handlingDelayPassed())
 = ColctCrisisToHandle

 and ColctCrisisToHandle->msrColSubtract(ColctCrisisToAllocateIfPossible)
   = ColctCrisisToRemind

 and if (ColctCrisisToRemind->size().geq(1))
   then (AMessageForCrisisHandlers.value
      ='There are alerts pending since more than the defined delay. Please REACT !'
      and TheSystem.rnactAdministrator.
        rnInterfaceIN^ieMessage(AMessageForCrisisHandlers)
        and TheSystem.rnactCoordinator
          ->forAll(rnInterfaceIN^ieMessage(AMessageForCrisisHandlers))
      )
   else true
   endif}

/* Post Protocol:*/
postP{ let TheSystem: ctState in
 let TheClock: dtDateAndTime in

 self.rnActor.rnSystem = TheSystem
 and TheSystem.clock = TheClock
 and TheSystem@post.vpLastReminder = TheClock}
```

## 5.2 Environment - Out Interface Operation Scheme for actAdministrator

### 5.2.1 Operation Model for oeAddCoordinator

The `oeAddCoordinator` operation has the following properties:

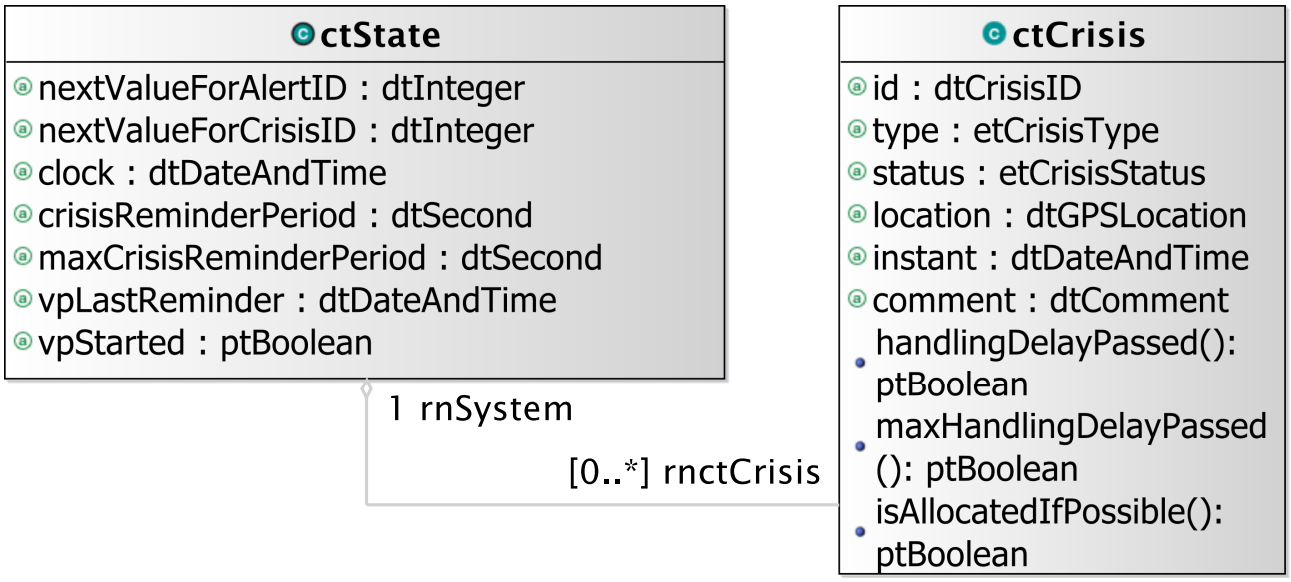

Figure 5.1: oeSollicitateCrisisHandling operation scope

| OPERATION | |
|---|---|
| ***oeAddCoordinator*** | |
| sent to add a new coordinator in the system's post state and environment's post state. | |
| ***Parameters*** | |
| 1 | **AdtCoordinatorID: dtCoordinatorID**<br>used to initialize the id field |
| 2 | **AdtLogin: dtLogin**<br>used to initialize the login field |
| 3 | **AdtPassword: dtPassword**<br>used to initialize the password field |
| ***Return type*** | |
| ptBoolean | |
| ***Pre-Condition (protocol)*** | |
| PreP 1 | the system is started |
| PreP 2 | the actor logged previously and did not log out ! (i.e. the associated ctAdministrator instance is considered logged) |
| ***Pre-Condition (functional)*** | |
| PreF 1 | it is supposed that there cannot exist a ctCoordinator instance with the same `id` attribute as the one the administrator wants to delete. |
| ***Post-Condition (functional)*** | |
| PostF 1 | the environment has a new instance of coordinator actor allowing for input/output message communication with the system. |
| PostF 2 | the system's state has a new instance of ctCoordinator initialized with the given values. |
| PostF 3 | the new actor instance and ctCoordinator instance are related. |
| PostF 4 | the new actor instance and ctCoordinator instance are related according to the authenticated association. |
| PostF 5 | the administrator actor is informed about the satisfaction of its request. |

***continues in next page . . .***

***. . . Operation table continuation***

| *Post-Condition (protocol)* | |
|---|---|
| PostP 1 | none |

The listing 5.3 provides the Messir (MCL-oriented) specification of the operation.

```
1
2  /* Pre Protocol:*/
3  preP{let TheSystem: ctState in

### 5.2.2 Operation Model for oeDeleteCoordinator

The `oeDeleteCoordinator` operation has the following properties:

| OPERATION | |
|---|---|
| ***oeDeleteCoordinator*** | |
| sent to delete an existing coordinator in the system's post state and environment's post state. | |
| ***Parameters*** | |
| 1 | **AdtCoordinatorID: dtCoordinatorID**<br>used for ctCoordinator instance retrieval |
| ***Return type*** | |
| ptBoolean | |
| ***Pre-Condition (protocol)*** | |
| PreP 1 | the system is started |
| PreP 2 | the actor logged previously and did not log out ! (i.e. the associated ctAdministrator instance is considered logged) |
| ***Pre-Condition (functional)*** | |
| PreF 1 | it is supposed that there exist one ctCoordinator instance with the same `id` attribute than the one the administrator wants to create. |
| ***Post-Condition (functional)*** | |
| PostF 1 | the ctCoordinator class instance having the required id do not belong anymore to the post state as well as is related actCoordinator actor instance. |
| PostF 2 | the administrator actor is informed about the satisfaction of its request. |
| ***Post-Condition (protocol)*** | |
| PostP 1 | none |

The listing 5.4 provides the Messir (MCL-oriented) specification of the operation.

```
1
2  /* Pre Protocol:*/
3  preP{let TheSystem: ctState in
4   let TheActor:actAdministrator in
5
6   self.rnActor.rnSystem = TheSystem
7   and self.rnActor = TheActor
8
9  /* PreP01 */
10  and TheSystem.vpStarted = true
11 /* PreP02 */
12  and TheActor.rnctAuthenticated.vpIsLogged = true}
13
14 /* Pre Functional:*/

29  self.rnActor.rnSystem = TheSystem
30  and self.rnActor = TheActor
31 /* PostF01 */
```

```
32   TheSystem.rnctCoordinator->select(id.eq(AdtCoordinatorID))
33   = ThectCoordinator
34   and ThectCoordinator.rnactCoordinator->forAll(msrIsKilled)
35   and ThectCoordinator.msrIsKilled
36
37   /* PostF02 */
38   and TheActor.rnInterfaceIN^ieCoordinatorDeleted()
39
40   /* Post Protocol:*/
41  /* PostP01 */
42   and true}
43
44  /* Post Protocol:*/
45  postP{ true}
```

Listing 5.4: Messir (MCL-oriented) specification of the operation *oeDeleteCoordinator*.

## 5.3 Environment - Out Interface Operation Scheme for actAuthenticated

### 5.3.1 Operation Model for oeSubmitCaptcha

The `oeSubmitCaptcha` operation has the following properties:

| OPERATION | |
|---|---|
| ***oeSubmitCaptcha*** | |
| Submits a response to a captcha test to the system | |
| ***Parameters*** | |
| 1 | **AdtResponse: dtCaptchaResponse**<br>The response given by the user of the captcha test |
| ***Return type*** | |
| ptBoolean | |
| ***Pre-Condition (protocol)*** | |
| PreP 1 | the system must be started |
| PreP 2 | the actor must not be logged in yet |
| PreP 3 | the system must have send a captcha test to the actor first |
| ***Pre-Condition (functional)*** | |
| PreF 1 | none |
| ***Post-Condition (functional)*** | |
| PostF 1 | the actors answer to the captcha test will be forwarded to the captcha validator |
| ***Post-Condition (protocol)*** | |
| PostP 1 | the system is no longer expecting the user to answer a captcha test |

The listing 5.5 provides the Messir (MCL-oriented) specification of the operation.

```
1
2  /* Pre Protocol:*/
3  preP{let TheSystem: ctState in
4      let TheActor:actAuthenticated in
5      self.rnActor.rnSystem = TheSystem
6      and self.rnActor = TheActor
7
```

```
8       /* PreP01 */
9       and TheSystem.vpStarted = true
10      /* PreP02 */
11      and TheActor.rnctAuthenticated.vpIsLogged = false
12      /* PreP03 */
13      and TheActor.rnctAuthenticated.awaitedCaptchaId.is() = true}
14
15  /* Pre Functional:*/
16  preF{true}
17
18  /* Post Functional:*/
19  postF{let TheSystem: ctState in
20      let TheactAuthenticated:actAuthenticated in
21      let TheactValidator:actCaptchaValidator in
22
23      self.rnActor.rnSystem = TheSystem
24      and self.rnActor = TheactAuthenticated
25
26      /* PostF01 */
27      and TheactValidator.rnInterfaceIN^ieVerifyCaptcha(AdtResponse)}
28
29  /* Post Protocol:*/
30  postP{ let TheSystem: ctState in
31      let TheactAuthenticated:actAuthenticated in
32
33      self.rnActor.rnSystem = TheSystem
34      and self.rnActor = TheactAuthenticated
35
36      /* PostF01 */
37      and TheactAuthenticated.rnctAuthenticated.awaitedCaptchaId.is() = false}
```

Listing 5.5: Messir (MCL-oriented) specification of the operation *oeSubmitCaptcha*.

### 5.3.2 Operation Model for oeLogin

The `oeLogin` operation has the following properties:

| OPERATION | |
|---|---|
| ***oeLogin*** | |
| sent to request authorization to request access secured system operations. | |
| ***Parameters*** | |
| 1 | **AdtLogin: dtLogin**<br>first information used to determine accessibility rights for the actual actor. |
| 2 | **AdtPassword: dtPassword**<br>second information used to determine accessibility rights for the actual actor. |
| ***Return type*** | |
| ptBoolean | |
| ***Pre-Condition (protocol)*** | |
| PreP 1 | the system is started |
| PreP 2 | the actor is not already logged in ! (i.e. the associated ctAuthenticated instance is not considered logged) |
| ***Pre-Condition (functional)*** | |
| PreF 1 | none |
| ***Post-Condition (functional)*** | |

***continues in next page . . .***

***. . . Operation table continuation***

| | |
|---|---|
| PostF 1 | if the login and password provided by the actor correspond to the ones that belong to the ctAuthenticated instance he is related to then a welcome message is sent to the actor (n.b. the logged status is changed as a post-protocol condition); else the actor is notified that he gave incorrect data and all the administrator actors existing in the environment are notified of an intrusion attempt. |
| ***Post-Condition (protocol)*** | |
| PostP 1 | if the authentication information is correct then the actor is known to be logged in ! (i.e. the associated ctAuthenticated instance with given login and password is considered logged) |

The listing 5.6 provides the Messir (MCL-oriented) specification of the operation.

```
1
2  /* Pre Protocol:*/
3  preP{let TheSystem: ctState in
4   let TheActor:actAuthenticated in
5   self.rnActor.rnSystem = TheSystem
6   and self.rnActor = TheActor
7
8  /* PreP01 */
9   and TheSystem.vpStarted = true
10 /* PreP02 */
11  and TheActor.rnctAuthenticated.vpIsLogged = false}
12
13 /* Pre Functional:*/
14 preF{/* PreF01 */
15 true}
16
17 /* Post Functional:*/
18 postF{let TheSystem: ctState in
19  let TheactAuthenticated:actAuthenticated in
20
21  let AptStringMessageForTheactAuthenticated: ptString in
22  let AptStringMessageForTheactAdministrator:ptString in
23
24  self.rnActor.rnSystem = TheSystem
25  and self.rnActor = TheactAuthenticated
26
27  and /* PostF01 */
28    if (TheactAuthenticated.rnctAuthenticated.pwd
29      = AdtPassword
30      and TheactAuthenticated.rnctAuthenticated.login
31        = AdtLogin
32      )
33    then (AptStringMessageForTheactAuthenticated.eq('You are logged ! Welcome ...')
34       and TheactAuthenticated.rnInterfaceIN^ieMessage(AptStringMessageForTheactAuthenticated)
35       )
36    else (AptStringMessageForTheactAuthenticated
37       .eq('Wrong identification information ! Please try again ...')
38       and TheactAuthenticated.rnInterfaceIN^ieMessage(AptStringMessageForTheactAuthenticated)
39       and AptStringMessageForTheactAdministrator.eq('Intrusion tentative !')
40       and TheSystem.rnactAdministrator
41         .rnInterfaceIN^ieMessage(AptStringMessageForTheactAdministrator)
42       )
43    endif}
44
45 /* Post Protocol:*/
46 postP{ let TheSystem: ctState in
47  let TheactAuthenticated:actAuthenticated in
48
49  self.rnActor.rnSystem = TheSystem
50  and self.rnActor = TheactAuthenticated
```

```
51 /* PostP01 */

56  else true
57  endif}
```

Listing 5.6: Messir (MCL-oriented) specification of the operation *oeLogin*.

### 5.3.3 Operation Model for oeLogout

The `oeLogout` operation has the following properties:

| OPERATION | |
|---|---|
| ***oeLogout*** sent to end the secured access to specific system operations. | |
| ***Return type*** | |
| ptBoolean | |
| ***Pre-Condition (protocol)*** | |
| PreP 1 | the system is started |
| PreP 2 | the actor is currently logged in ! (i.e. the associated ctAuthenticated instance is considered logged) |
| ***Pre-Condition (functional)*** | |
| PreF 1 | |
| ***Post-Condition (functional)*** | |
| PostF 1 | a logout confirmation message is sent to the actor (n.b. the logged status is changed as a post-protocol condition) |
| ***Post-Condition (protocol)*** | |
| PostP 1 | the actor is known to be logged out ! (i.e. the associated ctAuthenticated instance with given login and password is considered logged out) |

The listing 5.7 provides the Messir (MCL-oriented) specification of the operation.

```
1
2  /* Pre Protocol:*/
3  preP{let TheSystem: ctState in
4   let TheActor:actAdministrator in
5   self.rnActor.rnSystem = TheSystem
6   and self.rnActor = TheActor
7
8  /* PreP01 */
9   and TheSystem.vpStarted = true
10 /* PreP02 */
11  and TheActor.rnctAuthenticated.vpIsLogged = true}
12
13 /* Pre Functional:*/
14 preF{/* PreF01 */
15 true}
16
17 /* Post Functional:*/
18 postF{let TheSystem: ctState in
19  let TheactAuthenticated:actAuthenticated in
20  let AptStringMessageForTheactAuthenticated: ptString in
```

```
21
22  self.rnActor.rnSystem = TheSystem
23  and self.rnActor = TheactAuthenticated
24
25  /* PostF01 */
26  AptStringMessageForTheactAuthenticated.eq('You are logged out ! Good Bye ...')
27  and TheactAuthenticated.rnInterfaceIN^ieMessage(AptStringMessageForTheactAuthenticated)}
28
29 /* Post Protocol:*/
30 postP{ let TheSystem: ctState in
31  let TheactAuthenticated:actAuthenticated in
32
33  self.rnActor.rnSystem = TheSystem
34  and self.rnActor = TheactAuthenticated.asSet
35 /* PostP01 */
36  TheactAuthenticated.rnctAuthenticated@post.vpIsLogged = false}
```

Listing 5.7: Messir (MCL-oriented) specification of the operation *oeLogout*.

## 5.4 Environment - Out Interface Operation Scheme for actCaptchaGenerator

### 5.4.1 Operation Model for oeSendCaptcha

The `oeSendCaptcha` operation has the following properties:

| **Operation** | |
|---|---|
| ***oeSendCaptcha*** | |
| Sends a generated captcha test to the system | |
| ***Parameters*** | |
| 1 | **AdtCaptcha: dtCaptcha**<br>The generated captcha test |
| 2 | **AdtResponse: dtCaptchaResponse**<br>The correct answer to the generated captcha test |
| ***Return type*** | |
| ptBoolean | |
| ***Pre-Condition (protocol)*** | |
| PreP 1 | the system must be started |
| ***Pre-Condition (functional)*** | |
| PreF 1 | none |
| ***Post-Condition (functional)*** | |
| PostF 1 | the correct answer to the generated captcha test will be sent to the actor responsible for the validation of the users response |
| PostF 2 | the received captcha test will be forwarded to an actor |
| ***Post-Condition (protocol)*** | |
| PostP 1 | the system has received the requested randomly generated captcha test to be able to forward the captcha test to an actor |

The listing 5.8 provides the Messir (MCL-oriented) specification of the operation.

```
1
2  /* Pre Protocol:*/
3  preP{let TheSystem: ctState in
4      self.rnActor.rnSystem = TheSystem
5
6      /* PreP01 */
7      and TheSystem.vpStarted = true}
8
9  /* Pre Functional:*/
10 preF{true}
11
12 /* Post Functional:*/
13 postF{let TheSystem: ctState in
14     let TheactGenerator:actCaptchaGenerator in
15     let TheactValidator:actCaptchaValidator in
16     let TheactAuthenticated:actAuthenticated in
17
18     self.rnActor.rnSystem = TheSystem
19     and self.rnActor = TheactGenerator
20
21     /* PostF01 */
22     and TheactValidator.rnInterfaceIN^ieRegisterAnswer(AdtResponse)
23     /* PostF02 */
24     and TheactAuthenticated.rnInterfaceIN^ieConfirmCaptcha(AdtCaptcha)}
25
26 /* Post Protocol:*/
27 postP{ true}
```

Listing 5.8: Messir (MCL-oriented) specification of the operation *oeSendCaptcha*.

## 5.5 Environment - Out Interface Operation Scheme for actCaptchaValidator

### 5.5.1 Operation Model for oeCaptchaInvalid

The `oeCaptchaInvalid` operation has the following properties:

| **Operation** | |
|---|---|
| ***oeCaptchaInvalid*** | |
| Returns an answer to the system to notify that the supplied captcha was invalid | |
| ***Parameters*** | |
| 1 | **AdtCaptchaId: ptInteger**<br>The id of the supplied captcha test |
| ***Return type*** | |
| ptBoolean | |
| ***Pre-Condition (protocol)*** | |
| PreP 1 | The system must be started |
| PreP 2 | The actor for generating captcha tests must have first generated a captcha test and must have send it to the validating actor to store it locally |
| ***Pre-Condition (functional)*** | |
| PreF 1 | none |
| ***Post-Condition (functional)*** | |
| PostF 1 | The user is notified by the system about the invalid answer to the given captcha test by a message |
| ***Post-Condition (protocol)*** | |
| PostP 1 | The actor does no longer hold reference to the correct answer to the given captcha test |

The listing 5.9 provides the Messir (MCL-oriented) specification of the operation.

```
1
2  /* Pre Protocol:*/
3  preP{let TheSystem: ctState in
4       let TheactValidator:actCaptchaValidator in
5      self.rnActor.rnSystem = TheSystem
6
7      /* PreP01 */
8      and TheSystem.vpStarted = true
9      /* PreP02 */
10     and TheactValidator.rnactCaptchaValidator.map.get(AdtCaptchaId).is() = true}
11
12 /* Pre Functional:*/
13 preF{true}
14
15 /* Post Functional:*/
16 postF{let TheSystem: ctState in
17     let TheactValidator:actCaptchaValidator in
18     let TheactAuthenticated:actAuthenticated in
19

21
22     self.rnActor.rnSystem = TheSystem
23     and self.rnActor = TheactValidator
24
25     /* PostF01 */
26     and AptStringMessageForTheactValidator.eq('Your submitted captcha response is invalid. Try
           again.')
27     and TheactAuthenticated.rnInterfaceIN^ieMessage(AptStringMessageForTheactValidator)}
28
29 /* Post Protocol:*/
30 postP{ let TheSystem: ctState in
31      let TheactValidator:actCaptchaValidator in
32
33      self.rnActor.rnSystem = TheSystem
34      and self.rnActor = TheactValidator
35
36      /* PostP01 */
37     and TheactValidator.rnactCaptchaValidator.map.remove(AdtCaptchaId)}
```

Listing 5.9: Messir (MCL-oriented) specification of the operation *oeCaptchaInvalid*.

### 5.5.2 Operation Model for oeCaptchaValid

The `oeCaptchaValid` operation has the following properties:

| **Operation** | |
|---|---|
| ***oeCaptchaValid*** | |
| Returns an answer to the system to notify that the supplied captcha was valid | |
| ***Parameters*** | |
| 1 | **AdtCaptchaId: ptInteger**<br>The id of the supplied captcha test |
| ***Return type*** | |
| ptBoolean | |
| ***Pre-Condition (protocol)*** | |
| PreP 1 | The system must be started |
| PreP 2 | The actor for generating captcha tests must have first generated a captcha test and must have send it to the validating actor to store it locally |

***continues in next page . . .***

***... Operation table continuation***

| | |
|---|---|
| ***Pre-Condition (functional)*** | |
| PreF 1 | none |
| ***Post-Condition (functional)*** | |
| PostF 1 | The user is notified by the system about the valid answer to the given captcha test by a message |
| ***Post-Condition (protocol)*** | |
| PostP 1 | The actor does no longer hold reference to the correct answer to the given captcha test |

The listing 5.10 provides the Messir (MCL-oriented) specification of the operation.

```

Listing 5.10: Messir (MCL-oriented) specification of the operation *oeCaptchaValid*.

## 5.6 Environment - Out Interface Operation Scheme for actComCompany

### 5.6.1 Operation Model for oeAlert

The `oeAlert` operation has the following properties:

| OPERATION | |
|---|---|
| ***oeAlert*** | |
| Any human having a phone able to connect to the communication companies using the *iCrash* system can send his company an sms message with structured information in order to declare an alert. | |
| ***Parameters*** | |
| 1 | **AetHumanKind: etHumanKind**<br>the kind of human informing of an alert. |
| 2 | **AdtDate: dtDate**<br>the date of the alert |
| 3 | **AdtTime: dtTime**<br>the time of the alert |
| 4 | **AdtPhoneNumber: dtPhoneNumber**<br>the phone number of the human sending the alert SMS message |
| 5 | **AdtGPSLocation: dtGPSLocation**<br>the GPS position of the phone at the date and time the message was sent. |
| 6 | **AdtComment: dtComment**<br>a free text message sent by the human providing information on the alert that he wants to declare |
| ***Return type*** | |
| ptBoolean | |
| ***Pre-Condition (protocol)*** | |
| PreP 1 | the system is supposed to be created and initialized. |
| ***Pre-Condition (functional)*** | |
| PreF 1 | the date and time the alert is declared is supposed to be in the past with respect to the current time known by the system. |
| ***Post-Condition (functional)*** | |
| PostF 1 | the ctState attribute for the next value for alert IDs is incremented by one at post. |
| PostF 2 | a new alert instance exists in the post state with status pending, instant information (resp. GPS location and comment) based on date and time provided (resp. position and comment); and with alert ID being a string conversion of the dtInteger value available in the pre state in the ctState instance. |
| PostF 3 | if there exist no already registered alert near to the alert currently declared then a new crisis is added in the post state and initialized with: its ID being the one provided by the ctState instance (which is incremented by one in the post state), its type considered as small, its status being pending, its declared time being the same than the alert and a default comment indicating that a report will come later on. else the crisis to which the new alert must be related to is the one related to any alert nearby in the pre-state. |
| PostF 4 | the post state relates the new alert to the previously characterized crisis. |
| PostF 5 | if there is no ctHuman instance having same phone number and same kind in the pre-state then a new one is added in the post-state with given phone number and kind and is associated to the communication company actor used to declare the alert. else the pre-state one is chosen |
| PostF 6 | and this specified ctHuman is related to the new alert thus indicating he has signled the alert. |
| ***Post-Condition (protocol)*** | |
| PostP 1 | none |

The listing 5.11 provides the Messir (MCL-oriented) specification of the operation.

## 5.7 Environment - Out Interface Operation Scheme for actCoordinator

### 5.7.1 Operation Model for oeCloseCrisis

The `oeCloseCrisis` operation has the following properties:

| OPERATION | |
|---|---|
| ***oeCloseCrisis*** | |
| sent to indicate that a crisis should be considered as closed. | |
| ***Parameters*** | |
| 1 | **AdtCrisisID: dtCrisisID** |
| | the identification information used to determine the crisis to close |
| ***Return type*** | |
| ptBoolean | |

***continues in next page . . .***

***... Operation table continuation***

| *Pre-Condition (protocol)* | |
|---|---|
| PreP 1 | the system is started |
| PreP 2 | the actor logged previously and did not log out ! (i.e. the associated ctCoordinator instance is considered logged) |
| ***Pre-Condition (functional)*** | |
| PreF 1 | it is supposed that there exist one ctCrisis instance with the same `id` attribute value as the one provided by the coordinator actor who wants to close. |
| ***Post-Condition (functional)*** | |
| PostF 1 | the ctCrisis class instance having the provided id is considered closed in the post state. |
| PostF 2 | There is no handler declared in the system as associated to the crisis. |
| PostF 3 | all the alert instances associated to this crisis do not belong any more to the system's post state. |
| PostF 4 | the coordinator actor is informed about the satisfaction of its request. |
| ***Post-Condition (protocol)*** | |
| PostP 1 | none |

### 5.7.2 Operation Model for oeGetAlertsSet

The `oeGetAlertsSet` operation has the following properties:

| OPERATION | |
|---|---|
| ***oeGetAlertsSet*** | |
| sent to request all the ctAlert instances having a specific status. | |
| ***Parameters*** | |
| 1 | **AetAlertStatus: etAlertStatus** the criteria used to select the alerts to send back to the actor |
| ***Return type*** | |
| ptBoolean | |
| ***Pre-Condition (protocol)*** | |
| PreP 1 | the system is started |
| PreP 2 | the actor logged previously and did not log out ! (i.e. the associated ctCoordinator instance is considered logged) |
| ***Pre-Condition (functional)*** | |
| PreF 1 | none |
| ***Post-Condition (functional)*** | |
| PostF 1 | the post state is the one obtained by satisfying the `isSentToCoordinator` predicate for each alert having the provided status and for the actor sending the message. (cf. specification of `isSentToCoordinator` predicate given for the `ctAlert` type. |
| ***Post-Condition (protocol)*** | |
| PostP 1 | none |

### 5.7.3 Operation Model for oeGetCrisisSet

The `oeGetCrisisSet` operation has the following properties:

| OPERATION |
|---|

***continues in next page ...***

***. . . Operation table continuation***

| *oeGetCrisisSet* | |
|---|---|
| sent to request all the ctCrisis instances having a specific status. | |
| ***Parameters*** | |
| 1 | **AetCrisisStatus: etCrisisStatus**<br>the status information used to determine the crisis to send back to the actor |
| ***Return type*** | |
| ptBoolean | |
| ***Pre-Condition (protocol)*** | |
| PreP 1 | the system is started |
| PreP 2 | the actor logged previously and did not log out ! (i.e. the associated ctCoordinator instance is considered logged) |
| ***Pre-Condition (functional)*** | |
| PreF 1 | none |
| ***Post-Condition (functional)*** | |
| PostF 1 | the post state is the one obtained by satisfying the `isSentToCoordinator` predicate for each crisis having the provided status and for the actor sending the message `ieSendACrisis`. (cf. specification of `isSentToCoordinator` predicate given for the `ctCrisis` type. |
| ***Post-Condition (protocol)*** | |
| PostP 1 | none |

### 5.7.4 Operation Model for oeInvalidateAlert

The `oeInvalidateAlert` operation has the following properties:

| OPERATION | |
|---|---|
| *oeInvalidateAlert* | |
| sent to indicate that an alert should be considered as closed. | |
| ***Parameters*** | |
| 1 | **AdtAlertID: dtAlertID**<br>the identification information used to determine the alert to close |
| ***Return type*** | |
| ptBoolean | |
| ***Pre-Condition (protocol)*** | |
| PreP 1 | the system is started |
| PreP 2 | the actor logged previously and did not log out ! (i.e. the associated ctCoordinator instance is considered logged) |
| ***Pre-Condition (functional)*** | |
| PreF 1 | it is supposed that there exist one ctAlert instance with the same `id` attribute value as the one provided by the coordinator actor who wants to close. |
| ***Post-Condition (functional)*** | |
| PostF 1 | the ctAlert class instance having the provided id is considered closed in the post state. |
| PostF 2 | the coordinator actor is informed about the satisfaction of its request. |
| ***Post-Condition (protocol)*** | |
| PostP 1 | none |

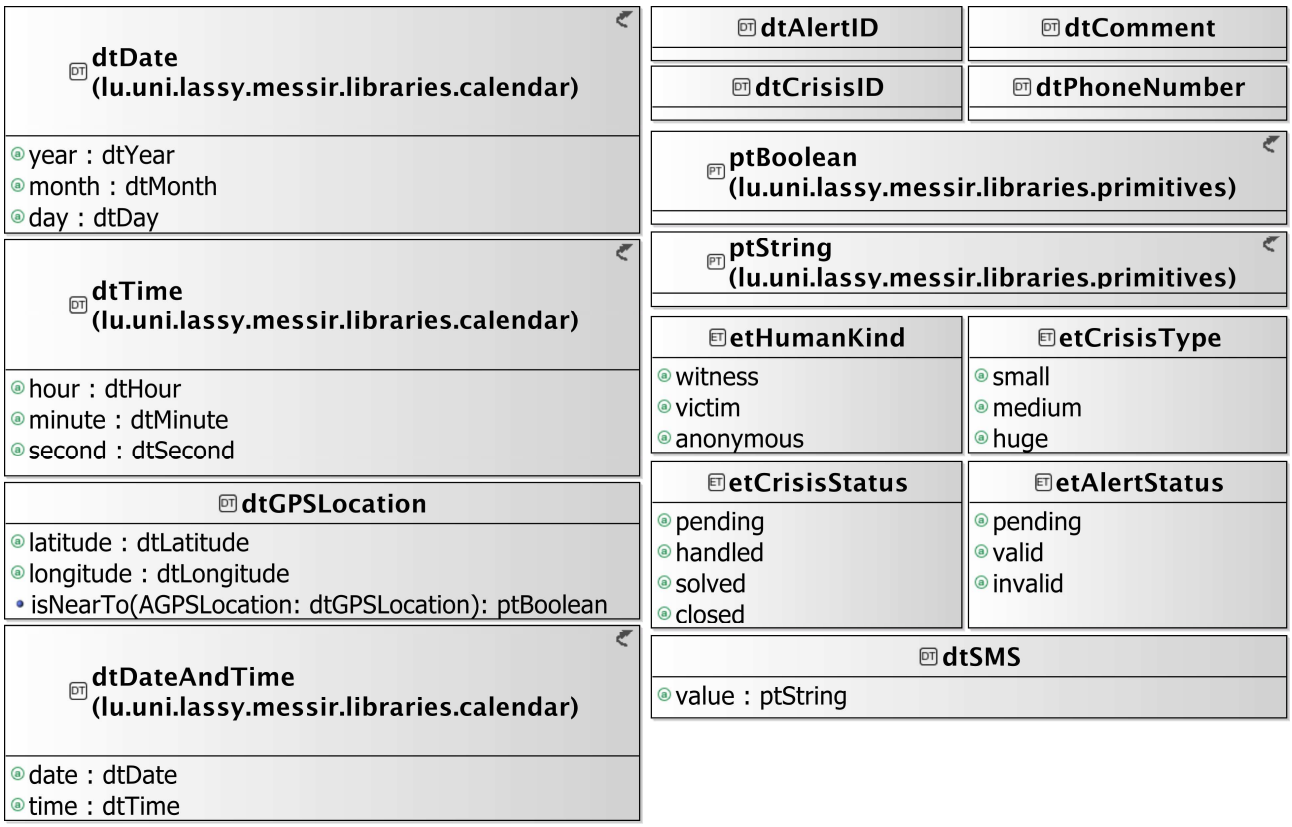

Figure 5.2: oeAlert operation scope

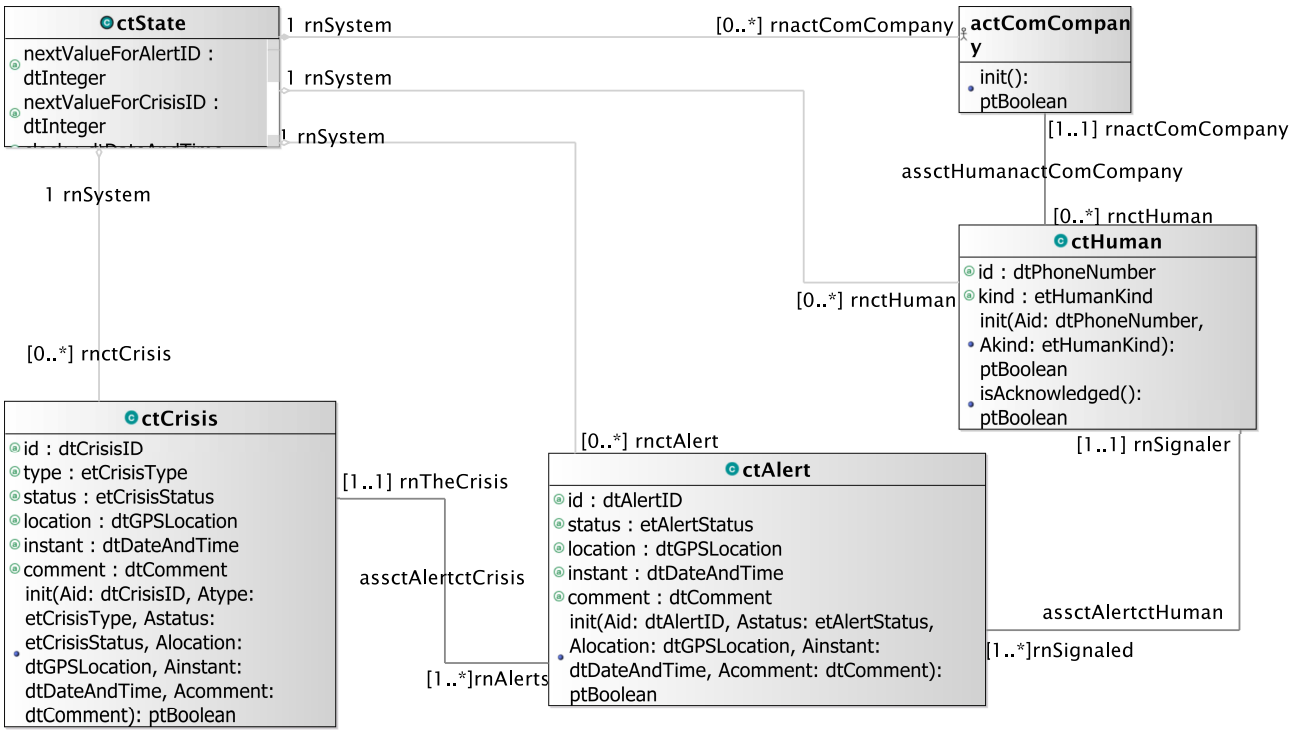

Figure 5.3: oeAlert operation scope

### 5.7.5 Operation Model for oeReportOnCrisis

The `oeReportOnCrisis` operation has the following properties:

| OPERATION | |
|---|---|
| ***oeReportOnCrisis*** | |
| sent to update the textual information available for a specific handled crisis. | |
| ***Parameters*** | |
| 1 | **AdtCrisisID: dtCrisisID**<br>the identification information used to determine the crisis to report on |
| 2 | **AdtComment: dtComment**<br>the textual information commenting the crisis |
| ***Return type*** | |
| ptBoolean | |
| ***Pre-Condition (protocol)*** | |
| PreP 1 | the system is started |
| PreP 2 | the actor logged previously and did not log out ! (i.e. the associated ctCoordinator instance is considered logged) |
| ***Pre-Condition (functional)*** | |
| PreF 1 | it is supposed that there exist one crisis in the pre state having the given id. |
| ***Post-Condition (functional)*** | |
| PostF 1 | the comment attribute of the crisis instance having the given id is replaced by the given one and the requesting actor is notified of this update. |
| ***Post-Condition (protocol)*** | |
| PostP 1 | none |

### 5.7.6 Operation Model for oeSetCrisisHandler

The `oeSetCrisisHandler` operation has the following properties:

| OPERATION | |
|---|---|
| ***oeSetCrisisHandler*** | |
| sent to declare himself as been the handler of a crisis having the specified id. | |
| ***Parameters*** | |
| 1 | **AdtCrisisID: dtCrisisID**<br>the identification information used to determine the crisis |
| ***Return type*** | |
| ptBoolean | |
| ***Pre-Condition (protocol)*** | |
| PreP 1 | the system is started |
| PreP 2 | the actor logged previously and did not log out ! (i.e. the associated ctCoordinator instance is considered logged) |
| ***Pre-Condition (functional)*** | |
| PreF 1 | there exist one crisis having the given id in the pre-state. |
| ***Post-Condition (functional)*** | |
| PostF 1 | the ctCrisis instance having the provided id is in handled status at poststate and is associated to the actor that sends the message (which himself is notified with a textual message as confirmation). |

***continues in next page . . .***

***... Operation table continuation***

| | |
|---|---|
| PostF 2 | All the alerts related to this crisis are sent to the actor such that he can decide how to handle them. |
| PostF 3 | if the crisis was already handled at pre-sate then the associated handler actor is notified about the change of handler for one of his crisis (n.b. it might be the same even if not relevant). |
| PostF 4 | a message is sent to the communication company for any human related to an alert associated to the crisis. A human will receive as many messages as alerts he sent despite the fact that they might relate to the same crisis (i.e. one alert, one acknoledgement). |
| ***Post-Condition (protocol)*** | |
| PostP 1 | none |

### 5.7.7 Operation Model for oeSetCrisisStatus

The `oeSetCrisisStatus` operation has the following properties:

| OPERATION | |
|---|---|
| ***oeSetCrisisStatus*** | |
| sent to define the handling status of a specific crisis. | |
| ***Parameters*** | |
| 1 | **AdtCrisisID: dtCrisisID**<br>the identification information used to determine the crisis |
| 2 | **AetCrisisStatus: etCrisisStatus**<br>the new status value |
| ***Return type*** | |
| ptBoolean | |
| ***Pre-Condition (protocol)*** | |
| PreP 1 | the system is started |
| PreP 2 | the actor logged previously and did not log out ! (i.e. the associated ctCoordinator instance is considered logged) |
| ***Pre-Condition (functional)*** | |
| PreF 1 | it is supposed that there exist one crisis in the pre state having the given id. |
| ***Post-Condition (functional)*** | |
| PostF 1 | the crisis status attribute of the crisis instance having the given id is replaced by the given one and the requesting actor is notified of this update. |
| ***Post-Condition (protocol)*** | |
| PostP 1 | none |

### 5.7.8 Operation Model for oeSetCrisisType

The `oeSetCrisisType` operation has the following properties:

| OPERATION | |
|---|---|
| ***oeSetCrisisType*** | |
| sent to define the gravity type of a specific crisis. | |
| ***Parameters*** | |
| 1 | **AdtCrisisID: dtCrisisID**<br>the identification information used to determine the crisis |

***continues in next page ...***

***. . . Operation table continuation***

| | |
|---|---|
| 2 | **AetCrisisType: etCrisisType**<br>the new type value |
| ***Return type*** | |
| ptBoolean | |
| ***Pre-Condition (protocol)*** | |
| PreP 1 | the system is started |
| PreP 2 | the actor logged previously and did not log out ! (i.e. the associated ctCoordinator instance is considered logged) |
| ***Pre-Condition (functional)*** | |
| PreF 1 | it is supposed that there exist one crisis in the pre state having the given id. |
| ***Post-Condition (functional)*** | |
| PostF 1 | the crisis type attribute of the crisis instance having the given id is replaced by the given one and the requesting actor is notified of this update. |
| ***Post-Condition (protocol)*** | |
| PostP 1 | none |

### 5.7.9 Operation Model for oeValidateAlert

The `oeValidateAlert` operation has the following properties:

| OPERATION | |
|---|---|
| ***oeValidateAlert***<br>sent to indicate that a specific alert is not a fake. | |
| ***Parameters*** | |
| 1 | **AdtAlertID: dtAlertID**<br>the identification information used to determine the alert instance |
| ***Return type*** | |
| ptBoolean | |
| ***Pre-Condition (protocol)*** | |
| PreP 1 | the system is started |
| PreP 2 | the actor logged previously and did not log out ! (i.e. the associated ctCoordinator instance is considered logged) |
| ***Pre-Condition (functional)*** | |
| PreF 1 | it is supposed that there exist one ctAlert instance with the same `id` attribute value as the one provided by the coordinator actor who wants to validate. |
| ***Post-Condition (functional)*** | |
| PostF 1 | the ctAlert class instance having the provided id is considered as valid in the post state and the coordinator actor is informed about the satisfaction of its request. |
| ***Post-Condition (protocol)*** | |
| PostP 1 | none |

## 5.8 Environment - Out Interface Operation Scheme for actMsrCreator

### 5.8.1 Operation Model for oeCreateSystemAndEnvironment

The `oeCreateSystemAndEnvironment` operation has the following properties:

| **Operation** | |
|---|---|
| ***oeCreateSystemAndEnvironment*** | |
| sent to request the initialization of the system's class instances and the environment actors instances. | |
| ***Parameters*** | |
| 1 | **AqtyComCompanies: ptInteger**<br>the quantity of communication companies to create in the environment |
| ***Return type*** | |
| ptBoolean | |
| ***Pre-Condition (protocol)*** | |
| PreP 1 | none |
| ***Pre-Condition (functional)*** | |
| PreF 1 | none |
| ***Post-Condition (functional)*** | |
| PostF 1 | the ctState instance is initialized with the integer 1 for the crisis and alert counters used for their identifications, a value for the clock corresponding to a default inital time (i.e. January 1st, 1970) the crisis reminder period is set to 300 seconds, the maximum crisis reminder period is fixed to 1200 seconds (i.e. 20 minutes), an initial value for the automatic reminder period equal to the current date and time and the system is considered in a started state. **Those predicates must be satisfied first since all the other depend on the existence of a ctState instance !** |
| PostF 2 | the `actMsrCreator` actor instance is initiated (remember that since the `oeCreateSystemAndEnvironment` is a special event it role is to make consistent the post state thus creating the actor and its interfaces is required even though the sending of this message logically would need the actor and its interfaces to already exist ...). |
| PostF 3 | the environment for communication company actors, in the post state, is made of `AqtyComCompanies` instances allowing for receiving and sending messages to humans. |
| PostF 4 | the environment for administrator actors, in the post state, is made of one instance. |
| PostF 5 | the environment for activator actors, in the post state, is made of one instance allowing for automatic message sending based on current system's and environment state'. |
| PostF 6 | the set of ctAdministrator instances at post is made of one instance initialized with 'icrashadmin' (resp. '7WXC1359') for login (resp. password) values. |
| PostF 7 | the association between ctAdministrator and actAdministrator is made of one couple made of the conjointly specified instances. |
| ***Post-Condition (protocol)*** | |
| PostP 1 | none is given since the only protocol variable to be modified in the post state is the one initialized with the ctState instance (i.e. vpStarted). |

The listing 5.12 provides the Messir (MCL-oriented) specification of the operation.

## 5.9 Environment - Actor Operation Scheme for actMsrCreator

### 5.9.1 Operation Model for init

The `init` operation has the following properties:

| Operation |
|---|
| ***init*** |
| used to create an instance of the actor together with its interface instances and update the assocations with the `ctState` instance. |
| ***Return type*** |
| ptBoolean |

## 5.10 Primary Types - Operation Schemes for Class ctAdministrator

### 5.10.1 Operation Model for init

The `init` operation has the following properties:

| Operation | |
|---|---|
| ***init*** | |
| used to initialize the current object as a new instance of the ctAdministrator type. | |
| ***Parameters*** | |
| 1 | **Alogin: dtLogin**<br>used to initialize the login field |
| 2 | **Apwd: dtPassword**<br>used to initialize the password field |
| ***Return type*** | |
| ptBoolean | |
| ***Post-Condition (functional)*** | |
| PostF 1 | true iff the system poststate includes the current object as a new ctAdministrator instance having its login and password attributes equal to the one provided as parameters and its vpIsLogged attribute equal to false. |

The listing 5.13 provides the Messir (MCL-oriented) specification of the operation.

```
1
2  /* Post Functional:*/
3  postF{if
4  (
5  let Self:ctAdministrator in
6  /* Post F01 */
7  Self.login(Alogin)
8  and Self.pwd = Apwd
9  and Self.vpIsLogged = false
10
11 /* Post F02 */
12 and (Self.oclIsNew and self = Self)
13 )
14 then (result = true)
15 else (result = false)
```

```
16 endif}
```

Listing 5.13: Messir (MCL-oriented) specification of the operation *init*.

## 5.11 Primary Types - Operation Schemes for Class ctAlert

### 5.11.1 Operation Model for init

The `init` operation has the following properties:

| OPERATION | |
|---|---|
| ***init*** | |
| used to initialize the current object as a new instance of the ctAlert type. | |
| ***Parameters*** | |
| 1 | **Aid: dtAlertID**<br>used to initialize the id field |
| 2 | **Astatus: etAlertStatus**<br>used to initialize the status field |
| 3 | **Alocation: dtGPSLocation**<br>used to initialize the location field |
| 4 | **Ainstant: dtDateAndTime**<br>used to initialize the instant field |
| 5 | **Acomment: dtComment**<br>used to initialize the comment field |
| ***Return type*** | |
| ptBoolean | |
| ***Post-Condition (functional)*** | |
| PostF 1 | true iff the system poststate includes the current object as a new ctAlert instance having its attributes equal to the ones provided as parameters. |

The listing 5.14 provides the Messir (MCL-oriented) specification of the operation.

```
1
2  /* Post Functional:*/
3  postF{if
4  (
5  /* Post F01 */
6  let Self:ctAlert in
7  Self.id = Aid
8  and Self.status = Astatus
9  and Self.location = Alocation
10 and Self.instant = Ainstant
11 and Self.comment = Acomment
12 /* Post F02 */
13 and (Self.oclIsNew and self = Self)
14 )
15 then (result = true)
16 else (result = false)
17 endif}
```

Listing 5.14: Messir (MCL-oriented) specification of the operation *init*.

### 5.11.2 Operation Model for isSentToCoordinator

The `isSentToCoordinator` operation has the following properties:

| OPERATION | |
|---|---|
| ***isSentToCoordinator*** | |
| used to provide a given coordinator with current alert information. | |
| ***Parameters*** | |
| 1 | **AactCoordinator: actCoordinator**<br>the message destination |
| ***Return type*** | |
| ptBoolean | |
| ***Post-Condition (functional)*** | |
| PostF 1 | true iff the message ieSendAnAlert is sent to the input interface of the given coordinator actor with the current alert as parameter value. |

The listing 5.15 provides the Messir (MCL-oriented) specification of the operation.

```
1
2  /* Post Functional:*/
3  postF{if
4  (
5  /* Post F01 */
6  AactCoordinator.rnInterfaceIN.ieSendAnAlert(self)
7  )
8  then (result = true)
9  else (result = false)
10 endif}
```

Listing 5.15: Messir (MCL-oriented) specification of the operation *isSentToCoordinator*.

## 5.12 Primary Types - Operation Schemes for Class ctAuthenticated

### 5.12.1 Operation Model for init

The `init` operation has the following properties:

| OPERATION | |
|---|---|
| ***init*** | |
| used to initialize the current object as a new instance of the ctAuthenticated type. | |
| ***Parameters*** | |
| 1 | **Alogin: dtLogin**<br>used to initialize the login field |
| 2 | **Apwd: dtPassword**<br>used to initialize the password field |
| ***Return type*** | |
| ptBoolean | |
| ***Post-Condition (functional)*** | |

***continues in next page . . .***

***... Operation table continuation***

| | |
|---|---|
| PostF 1 | true iff the system poststate includes the current object as a new ctAuthenticated instance having its attributes equal to the ones provided as parameters. |

## 5.13 Primary Types - Operation Schemes for Class ctCoordinator

### 5.13.1 Operation Model for init

The `init` operation has the following properties:

| OPERATION | |
|---|---|
| ***init*** | |
| used to initialize the current object as a new instance of the ctCoordinator type. | |
| ***Parameters*** | |
| 1 | **Aid: dtCoordinatorID**<br>used to initialize the id field |
| 2 | **Alogin: dtLogin**<br>used to initialize the login field |
| 3 | **Apwd: dtPassword**<br>used to initialize the password field |
| ***Return type*** | |
| ptBoolean | |
| ***Post-Condition (functional)*** | |
| PostF 1 | true iff the system poststate includes the current object as a new ctCoordinator instance having its attributes equal to the ones provided as parameters. |

The listing 5.16 provides the Messir (MCL-oriented) specification of the operation.

```
1
2  /* Post Functional:*/
3  postF{if
4  (
5  /* Post F01 */
6  let Self:ctCoordinator in
7  Self.id = Aid
8  and Self.login = Alogin
9  and Self.pwd = Apwd
10 and Self.vpIsLogged = false
11 /* Post F02 */
12 and (Self.oclIsNew and self = Self)
13 )
14 then (result = true)
15 else (result = false)
16 endif}
```

Listing 5.16: Messir (MCL-oriented) specification of the operation *init*.

## 5.14 Primary Types - Operation Schemes for Class ctCrisis

### 5.14.1 Operation Model for init

The `init` operation has the following properties:

| **Operation** | |
|---|---|
| ***init*** | |
| used to initialize the current object as a new instance of the ctCrisis type. | |
| ***Parameters*** | |
| 1 | **Aid: dtCrisisID**<br>used to initialize the id field |
| 2 | **Atype: etCrisisType**<br>used to initialize the type field |
| 3 | **Astatus: etCrisisStatus**<br>used to initialize the status field |
| 4 | **Alocation: dtGPSLocation**<br>used to initialize the location field |
| 5 | **Ainstant: dtDateAndTime**<br>used to initialize the instant field |
| 6 | **Acomment: dtComment**<br>used to initialize the comment field |
| ***Return type*** | |
| ptBoolean | |
| ***Post-Condition (functional)*** | |
| PostF 1 | true iff the system poststate includes the current object as a new ctCrisis instance having its attributes equal to the ones provided as parameters. |

The listing 5.17 provides the Messir (MCL-oriented) specification of the operation.

```
1
2  /* Post Functional:*/
3  postF{if
4  (
5  /* Post F01 */
6  let Self:ctCrisis in
7  Self.id = Aid
8  and Self.type = Atype
9  and Self.status = Astatus
10 and Self.location = Alocation
11 and Self.instant = Ainstant
12 and Self.comment = Acomment
13 /* Post F02 */
14 and (Self.oclIsNew and self = Self)
15 )
16 then (result = true)
17 else (result = false)
18 endif}
```

Listing 5.17: Messir (MCL-oriented) specification of the operation *init*.

### 5.14.2 Operation Model for handlingDelayPassed

The `handlingDelayPassed` operation has the following properties:

| OPERATION | |
|---|---|
| ***handlingDelayPassed*** | |
| used to determine if the crisis stood too longly in a pending status since last reminder. | |
| ***Return type*** | |
| ptBoolean | |
| ***Post-Condition (functional)*** | |
| PostF 1 | true iff the crisis is in pending status and if the duration between the current ctState clock information and the last reminder is greater than the crisis reminder period duration. |

The listing 5.18 provides the Messir (MCL-oriented) specification of the operation.

```
1
2  /* Post Functional:*/
3  postF{let TheSystem:ctState in
4  let CurrentClockSecondsQty:dtInteger in
5  let vpLastReminderSecondsQty:dtInteger in
6  let CrisisReminderPeriod:dtSecond in
7  if
8  ( /* Post F01 */
9   self.rnSystem = TheSystem
10  and self.status = pending
11  and TheSystem.clock.toSecondsQty() = CurrentClockSecondsQty
12  and TheSystem.vpLastReminder.toSecondsQty() = vpLastReminderSecondsQty
13  and TheSystem.crisisReminderPeriod = CrisisReminderPeriod
14  and CurrentClockSecondsQty.sub(vpLastReminderSecondsQty).gt(CrisisReminderPeriod) = true
15 )
16 then (result = true)
17 else (result = false)
18 endif}
```

Listing 5.18: Messir (MCL-oriented) specification of the operation *handlingDelayPassed*.

### 5.14.3 Operation Model for maxHandlingDelayPassed

The `maxHandlingDelayPassed` operation has the following properties:

| OPERATION | |
|---|---|
| ***maxHandlingDelayPassed*** | |
| used to determine if the crisis stood too longly in a pending status since its creation. | |
| ***Return type*** | |
| ptBoolean | |
| ***Post-Condition (functional)*** | |
| PostF 1 | true iff the crisis is in pending status and if the duration between the current ctState clock information and the crisis instant is greater than the maximum reminder period duration. |

The listing 5.19 provides the Messir (MCL-oriented) specification of the operation.

```
1
2  /* Post Functional:*/
3  postF{let TheSystem:ctState in
4  let CurrentClockSecondsQty:dtInteger in
5  let CrisisInstantSecondsQty:dtInteger in
6  let MaxCrisisReminderPeriod:dtSecond in
7  if
8  ( /* Post F01 */
9   self.rnSystem = TheSystem
10  and self.status = pending
11  and TheSystem.clock.toSecondsQty() = CurrentClockSecondsQty
12  and Self.instant.toSecondsQty() = CrisisInstantSecondsQty
13  and TheSystem.maxCrisisReminderPeriod = MaxCrisisReminderPeriod
14  and CurrentClockSecondsQty.sub(CrisisInstantSecondsQty)
15                .gt(MaxCrisisReminderPeriod)
16 )
17 then (result = true)
18 else (result = false)
19 endif}
```

Listing 5.19: Messir (MCL-oriented) specification of the operation *maxHandlingDelayPassed*.

### 5.14.4 Operation Model for isSentToCoordinator

The `isSentToCoordinator` operation has the following properties:

| OPERATION | |
|---|---|
| ***isSentToCoordinator*** | |
| used to provide a given coordinator with current crisis information. | |
| ***Parameters*** | |
| 1 | **AactCoordinator: actCoordinator**<br>the message destination actor |
| ***Return type*** | |
| ptBoolean | |
| ***Post-Condition (functional)*** | |
| PostF 1 | true iff the message ieSendACrisis is sent by the simulator to the input interface of the given coordinator actor with the current crisis as parameter value. |

The listing 5.20 provides the Messir (MCL-oriented) specification of the operation.

```
1
2  /* Post Functional:*/
3  postF{if
4  (
5  /* Post F01 */
6   AactCoordinator.rnInterfaceIN.ieSendACrisis(self)
7  )
8  then (result = true)
9  else (result = false)
10 endif}
```

Listing 5.20: Messir (MCL-oriented) specification of the operation *isSentToCoordinator*.

### 5.14.5 Operation Model for isAllocatedIfPossible

The `isAllocatedIfPossible` operation has the following properties:

| OPERATION | |
|---|---|
| ***isAllocatedIfPossible***<br>used to allocate a crisis to a coordinator if any or to alert the administrator of crisis waiting to be handled. | |
| ***Return type*** | |
| ptBoolean | |
| ***Post-Condition (functional)*** | |
| PostF 1 | true iff the duration between the crisis creation and the system's clock is greater than the maximum delay defined and |
| PostF 2 | if there exist at least one coordinator then (a) the post state associates to the crisis any of the existing coordinators and (b) the coordinator is informed that he is now the handlers of the crisis whose ID is communicated |
| PostF 3 | else a message is sent to all known administrators to request creation of new coordinators. |

The listing 5.21 provides the Messir (MCL-oriented) specification of the operation.

```
1
2  /* Post Functional:*/
3  postF{if (
4  /* Post F01 */
5  self.maxHandlingDelayPassed()
6  and
7   if (TheSystem.rnactCoordinator->msrIsEmpty = false)
8   then (
9     /* Post F02 */
10    TheSystem.rnactCoordinator->msrAny(true) = TheCoordinatorActor
11    and TheCoordinatorActor.rnctCoordinator = TheCoordinator
12    and self@post.rnHandler = TheCoordinator
13    and self@post.status = handled
14    and self.id.value = TheCrisisIDptString
15    and 'You are now considered as handling the crisis having ID: '
16      .ptStringConcat(TheCrisisIDptString) = TheMessage
17     and TheCoordinatorActor.rnInterfaceIN^ieMessage(TheMessage)
18   )
19  else ( /* Post F03 */
20     TheSystem.rnactAdministrator
21     ->forAll(rnInterfaceIN.ieMessage('Please add new coordinators to handle pending crisis !'))
22   )
23  endif
24  )
25 then (result = true)
26 else (result = false)
27 endif}
```

Listing 5.21: Messir (MCL-oriented) specification of the operation *isAllocatedIfPossible*.

## 5.15 Primary Types - Operation Schemes for Class ctHuman

### 5.15.1 Operation Model for init

The `init` operation has the following properties:

| OPERATION |
|---|

***continues in next page . . .***

***... Operation table continuation***

| ***init*** | |
|---|---|
| used to initialize the current object as a new instance of the ctHuman type. | |
| ***Parameters*** | |
| 1 | **Aid: dtPhoneNumber**<br>used to initialize the id field |
| 2 | **Akind: etHumanKind**<br>used to initialize the kind field |
| ***Return type*** | |
| ptBoolean | |
| ***Post-Condition (functional)*** | |
| PostF 1 | true iff the system poststate includes the current object as a new ctHuman instance having its attributes equal to the ones provided as parameters. |

The listing 5.22 provides the Messir (MCL-oriented) specification of the operation.

```
1
2  /* Post Functional:*/
3  postF{if
4  (
5  /* Post F01 */
6  let Self:ctHuman in
7
8  Self.id = Aid
9  and Self.kind = Akind
10
11 /* Post F02 */
12 and (Self.oclIsNew and self = Self)
13 )
14 then (result = true)
15 else (result = false)
16 endif}
```

Listing 5.22: Messir (MCL-oriented) specification of the operation *init*.

### 5.15.2 Operation Model for isAcknowledged

The `isAcknowledged` operation has the following properties:

| OPERATION | |
|---|---|
| ***isAcknowledged*** | |
| used to specify the property of having sent an alert acknowledge message to the human having declared the alert through its own communication company. | |
| ***Return type*** | |
| ptBoolean | |
| ***Post-Condition (functional)*** | |
| PostF 1 | true iff the message ieSmsSend is sent to the related input interface of the related communication company actor with the human phone number and the generic message 'The handling of your alert by our services is in progress !' |

## 5.16 Primary Types - Operation Schemes for Class ctState

### 5.16.1 Operation Model for init

The `init` operation has the following properties:

| OPERATION | |
|---|---|
| ***init*** | |
| used to initialize the current object as a new instance of the ctState type. | |
| ***Parameters*** | |
| 1 | **AnextValueForAlertID: dtInteger**<br>used to initialize the nextValueForAlertID field |
| 2 | **AnextValueForCrisisID: dtInteger**<br>used to initialize the nextValueForCrisisID field |
| 3 | **Aclock: dtDateAndTime**<br>used to initialize the clock field |
| 4 | **AcrisisReminderPeriod: dtSecond**<br>used to initialize the crisisReminderPeriod field |
| 5 | **AmaxCrisisReminderPeriod: dtSecond**<br>used to initialize the maxCrisisReminderPeriod field |
| 6 | **AvpLastReminder: dtDateAndTime**<br>used to initialize the vpLastReminder field |
| 7 | **AvpStarted: ptBoolean**<br>used to initialize the vpStarted field |
| ***Return type*** | |
| ptBoolean | |
| ***Post-Condition (functional)*** | |
| PostF 1 | true iff the system poststate includes the current object as a new ctState instance having its attributes equal to the ones provided as parameters. |

The listing 5.23 provides the Messir (MCL-oriented) specification of the operation.

```
1
2  /* Post Functional:*/
3  postF{if
4  (
5  /* Post F01 */
6  let Self:ctState in
7
8  Self.nextValueForAlertID = AnextValueForAlertID
9  and Self.nextValueForCrisisID = AnextValueForCrisisID
10 and Self.clock = Aclock
11 and Self.crisisReminderPeriod = AcrisisReminderPeriod
12 and Self.maxCrisisReminderPeriod = AmaxCrisisReminderPeriod
13 and Self.vpLastReminder = AvpLastReminder
14 and Self.vpStarted = AvpStarted
15
16 and (Self.oclIsNew and self = Self)
17 )
18 then (result = true)
19 else (result = false)
```

```
20 endif}
```

Listing 5.23: Messir (MCL-oriented) specification of the operation *init*.

## 5.17 Primary Types - Operation Schemes for Datatype dtAlertID

### 5.17.1 Operation Model for is

The `is` operation has the following properties:

| Operation | |
|---|---|
| ***is*** | |
| used to determine which strings are considered as valid alert identifiers. | |
| ***Return type*** | |
| ptBoolean | |
| ***Post-Condition (functional)*** | |
| PostF 1 | if the length of the value attribute of a dtAlertID is a ptInteger greater than zero and lower or equal to 20 then the operation returns the ptBoolean true, else the ptBoolean false. |

The listing 5.24 provides the Messir (MCL-oriented) specification of the operation.

```
1
2  /* Post Functional:*/
3  postF{let TheResult: ptBoolean in
4     ( if
5      ( self.value.length().gt(0)
6       and self.value.length().leq(20)
7      )
8      then (TheResult = true)
9      else (TheResult = false)
10     endif
11     result = TheResult
12    )}
```

Listing 5.24: Messir (MCL-oriented) specification of the operation *is*.

## 5.18 Primary Types - Operation Schemes for Datatype dtComment

### 5.18.1 Operation Model for is

The `is` operation has the following properties:

| Operation | |
|---|---|
| ***is*** | |
| used to determine which strings are considered as valid comments. | |
| ***Return type*** | |
| ptBoolean | |
| ***Post-Condition (functional)*** | |
| PostF 1 | true iff the length of the string value is not more than 160 characters. |

The listing 5.25 provides the Messir (MCL-oriented) specification of the operation.

```
1
2  /* Post Functional:*/
3  postF{let TheResult: ptBoolean in
4      ( if
5       ( MaxLength = 160
6        and self.value.length().leq(MaxLength)
7       )
8       then (TheResult = true)
9       else (TheResult = false)
10      endif
11      result = TheResult
12     )}
```

Listing 5.25: Messir (MCL-oriented) specification of the operation *is*.

## 5.19 Primary Types - Operation Schemes for Datatype dtCoordinatorID

### 5.19.1 Operation Model for is

The `is` operation has the following properties:

| **Operation** | |
|---|---|
| ***is*** | |
| used to determine which string are considered as valid alert identifiers. | |
| ***Return type*** | |
| ptBoolean | |
| ***Post-Condition (functional)*** | |
| PostF 1 | if the length of the value attribute of a dtCoordinatorID is a ptInteger greater than zero and lower or equal to 5 than the operation returns the ptBoolean true, else the ptBoolean false. |

The listing 5.26 provides the Messir (MCL-oriented) specification of the operation.

```
1
2  /* Post Functional:*/
3  postF{let TheResult: ptBoolean in
4      ( if
5       ( self.value.length().gt(0)
6        and self.value.length().leq(5)
7       )
8       then (TheResult = true)
9       else (TheResult = false)
10      endif
11      result = TheResult
12     )}
```

Listing 5.26: Messir (MCL-oriented) specification of the operation *is*.

## 5.20 Primary Types - Operation Schemes for Datatype dtCrisisID

### 5.20.1 Operation Model for is

The `is` operation has the following properties:

| Operation | |
|---|---|
| ***is*** | |
| used to determine which strings are considered as valid crisis identifiers. | |
| ***Return type*** | |
| ptBoolean | |
| ***Post-Condition (functional)*** | |
| PostF 1 | if the length of the value attribute of a dtCrisisID is a ptInteger greater than zero and lower or equal to 10 than the operation returns the ptBoolean true, else the ptBoolean false. |

The listing 5.27 provides the Messir (MCL-oriented) specification of the operation.

```
1
2  /* Post Functional:*/
3  postF{let TheResult: ptBoolean in
4      ( if
5       ( self.value.length().gt(0)
6        and self.value.length().leq(10)
7       )
8       then (TheResult = true)
9       else (TheResult = false)
10      endif
11      result = TheResult
12     )}
```

Listing 5.27: Messir (MCL-oriented) specification of the operation *is*.

## 5.21 Primary Types - Operation Schemes for Datatype dtGPSLocation

### 5.21.1 Operation Model for is

The `is` operation has the following properties:

| Operation | |
|---|---|
| ***is*** | |
| used to determine which couples are considered as valid dtGPSLocation values. | |
| ***Return type*** | |
| ptBoolean | |
| ***Post-Condition (functional)*** | |
| PostF 1 | true if both latitude and longitude are valid values according to their is operation. |

The listing 5.28 provides the Messir (MCL-oriented) specification of the operation.

```
1
2  /* Post Functional:*/
3  postF{let TheResult: ptBoolean in
4      ( if
5       ( self.latitude.is()
6        and self.longitude.is
7       )
8       then (TheResult = true)
9       else (TheResult = false)
10      endif
11      result = TheResult
12     )}
```

Listing 5.28: Messir (MCL-oriented) specification of the operation *is*.

### 5.21.2 Operation Model for isNearTo

The `isNearTo` operation has the following properties:

| **Operation** | |
|---|---|
| ***isNearTo*** | |
| used to determine if locations are considered enough close to be treated as equivalent in the application domain context. In the context of the iCrash system, we compute the distance between two GPS locations using the following Haversine formula. (more details can be found at: http://www.movable-type.co.uk/scripts/latlong.html and http://www.gpsvisualizer.com/calculators#distance ) | |
| ***Parameters*** | |
| 1 | **AGPSLocation: dtGPSLocation**<br>the GPS location to be compared to. |
| ***Return type*** | |
| ptBoolean | |
| ***Post-Condition (functional)*** | |
| PostF 1 | if the Haversine formula (ACOS(SIN(lat1)*SIN(lat2)+COS(lat1)*COS(lat2)*COS(lon2-lon1))*6371, in which latitudes and longitudes are in radiansapplied to the two dtGPS coordinates is lower to 100 meters) then the predicate is true and false otherwise. |

The listing 5.29 provides the Messir (MCL-oriented) specification of the operation.

```
1
2  /* Post Functional:*/
3  postF{let TheResult: ptBoolean in true
4      let EarthRadius: dtReal in
5      let MaxDistance: dtReal in
6      let ComparedLatitude: dtLatitude in
7      let ComparedLongitude: dtLongitude in
8      let R1: dtReal in let R1a: dtReal in
9      let R2: dtReal in let R2a: dtReal in
10
11     ( if
12      ( EarthRadius.value = 6371
13       and MaxDistance.value = 100
14
15       and self.latitude = ComparedLatitude
16       and self.longitude = ComparedLongitude
17       and self.latitude.sin() = R1a
18       and self.latitude.sin().mul(R1a) = R1
19       and self.latitude.cos() = R2a
```

```
20        and self.latitude.cos().mul(R2a) = R2
21
22        and self.longitude = ComparedLongitude
23        and self.longitude.sub(ComparedLongitude).cos().mul(R2)
24            .add(R1).acos().mul(EarthRadius).sub(MaxDistance)
25            .value.leq(0)
26       )
27       then (TheResult = true)
28       else (TheResult = false)
29       endif
30       result = TheResult
31      )}
```

Listing 5.29: Messir (MCL-oriented) specification of the operation *isNearTo*.

## 5.22 Primary Types - Operation Schemes for Datatype dtLatitude

### 5.22.1 Operation Model for is

The `is` operation has the following properties:

| OPERATION |
|---|
| ***is*** <br> used to determine which strings are considered as valid dtLatitude. |
| ***Return type*** |
| ptBoolean |
| ***Post-Condition (functional)*** |
| PostF 1 is true if the value is a real in the interval [-90.0 , +90.0]. |

The listing 5.30 provides the Messir (MCL-oriented) specification of the operation.

```
1
2  /* Post Functional:*/
3  postF{let TheResult: ptBoolean in
4      ( if
5       ( AdtValue.value.geq(-90.0)
6        and AdtValue.value.leq(+90.0)
7       )
8       then (TheResult = true)
9       else (TheResult = false)
10      endif
11      result = TheResult
12     )}
```

Listing 5.30: Messir (MCL-oriented) specification of the operation *is*.

## 5.23 Primary Types - Operation Schemes for Datatype dtLogin

### 5.23.1 Operation Model for is

The `is` operation has the following properties:

| OPERATION |
|---|
| ***is*** |
| used to determine which strings are considered as valid dtLogin. |
| ***Return type*** |
| ptBoolean |
| ***Post-Condition (functional)*** |
| PostF 1 is true of the length of the string value is not more than 20 characters. |

The listing 5.31 provides the Messir (MCL-oriented) specification of the operation.

```
1
2  /* Post Functional:*/
3  postF{let TheResult: ptBoolean in
4      let MaxLength: ptInteger in
5      ( if
6       ( MaxLength = 20
7        and self.value.length().leq(MaxLength)
8       )
9       then (TheResult = true)
10      else (TheResult = false)
11      endif
12      result = TheResult
13     )}
```

Listing 5.31: Messir (MCL-oriented) specification of the operation *is*.

## 5.24 Primary Types - Operation Schemes for Datatype dtLongitude

### 5.24.1 Operation Model for is

The `is` operation has the following properties:

| OPERATION |
|---|
| ***is*** |
| used to determine which strings are considered as valid dtLongitude. |
| ***Return type*** |
| ptBoolean |
| ***Post-Condition (functional)*** |
| PostF 1 is true if the value is a real in the interval [-180.0 , +180.0]. |

The listing 5.32 provides the Messir (MCL-oriented) specification of the operation.

```
1
2  /* Post Functional:*/
3  postF{let TheResult: ptBoolean in
4      ( if
5       ( AdtValue.value.geq(-180.0)
6        and AdtValue.value.leq(+180.0)
7       )
```

```
8       then (TheResult = true)
9       else (TheResult = false)
10      endif
11      result = TheResult
12     )}
```

Listing 5.32: Messir (MCL-oriented) specification of the operation *is*.

## 5.25 Primary Types - Operation Schemes for Datatype dtPassword

### 5.25.1 Operation Model for is

The `is` operation has the following properties:

| Operation |
|---|
| ***is*** |
| used to determine which strings are considered as valid dtPassword. |
| ***Return type*** |
| ptBoolean |
| ***Post-Condition (functional)*** |
| PostF 1 is true of the length of the string value is at least 6 characters long. |

The listing 5.33 provides the Messir (MCL-oriented) specification of the operation.

```
1
2  /* Post Functional:*/
3  postF{let TheResult: ptBoolean in
4      let MinLength: ptInteger in
5      ( if
6       ( MinLength = 6
7        and self.value.length().geq(MinLength)
8       )
9       then (TheResult = true)
10      else (TheResult = false)
11      endif
12      result = TheResult
13     )}
```

Listing 5.33: Messir (MCL-oriented) specification of the operation *is*.

## 5.26 Primary Types - Operation Schemes for Datatype dtPhoneNumber

### 5.26.1 Operation Model for is

The `is` operation has the following properties:

| Operation |
|---|
| ***is*** |
| used to determine which strings are considered as valid dtPhoneNumber. |
| ***Return type*** |

***continues in next page . . .***

***... Operation table continuation***

| ptBoolean | |
|---|---|
| ***Post-Condition (functional)*** | |
| PostF 1 | is true of the length of the string value is from 4 to 30 characters. No standard is applied ! |

The listing 5.34 provides the Messir (MCL-oriented) specification of the operation.

```
1
2  /* Post Functional:*/
3  postF{let TheResult: ptBoolean in
4     ( if
5      ( self.value.length().gt(4)
6       and self.value.length().leq(30)
7      )
8      then (TheResult = true)
9      else (TheResult = false)
10     endif
11     result = TheResult
12    )}
```

Listing 5.34: Messir (MCL-oriented) specification of the operation *is*.

## 5.27 Primary Types - Operation Schemes for Enumeration etAlertStatus

### 5.27.1 Operation Model for is

The `is` operation has the following properties:

| OPERATION | |
|---|---|
| ***is*** | |
| used to determine which litteral belongs to the enumeration. | |
| ***Return type*** | |
| ptBoolean | |
| ***Post-Condition (functional)*** | |
| PostF 1 | true iff the value is equal to one of the following values: `pending, valid, invalid` |

The listing 5.35 provides the Messir (MCL-oriented) specification of the operation.

```
1
2  /* Post Functional:*/
3  postF{let TheResult: ptBoolean in
4      ( if
5       ( self = pending
6        or self = valid
7        or self = invalid
8       )
9       then (TheResult = true)
10      else (TheResult = false)
11      endif
```

```
12      result = TheResult
13     )}
```

Listing 5.35: Messir (MCL-oriented) specification of the operation *is*.

## 5.28 Primary Types - Operation Schemes for Enumeration etCrisisStatus

### 5.28.1 Operation Model for is

The `is` operation has the following properties:

| OPERATION |
|---|
| ***is*** |
| used to determine which litteral belongs to the enumeration. |
| ***Return type*** |
| ptBoolean |
| ***Post-Condition (functional)*** |
| PostF 1 true iff the value is equal to one of the following values: `pending`, `handled`, `solved`, `closed`. |

The listing 5.36 provides the Messir (MCL-oriented) specification of the operation.

```
1
2  /* Post Functional:*/
3  postF{let TheResult: ptBoolean in
4      ( if
5       ( self = pending
6        or self = handled
7        or self = solved
8        or self = closed
9       )
10      then (TheResult = true)
11      else (TheResult = false)
12      endif
13      result = TheResult
14     )}
```

Listing 5.36: Messir (MCL-oriented) specification of the operation *is*.

## 5.29 Primary Types - Operation Schemes for Enumeration etCrisisType

### 5.29.1 Operation Model for is

The `is` operation has the following properties:

| OPERATION |
|---|
| ***is*** |
| used to determine which litteral belongs to the enumeration. |

***continues in next page . . .***

***... Operation table continuation***

| *Return type* |
|---|
| ptBoolean |
| ***Post-Condition (functional)*** |
| PostF 1 true iff the value is equal to one of the following values: `small, medium, huge` |

The listing 5.37 provides the Messir (MCL-oriented) specification of the operation.

```
1
2  /* Post Functional:*/
3  postF{let TheResult: ptBoolean in
4      ( if
5       ( self = small
6        or self = medium
7        or self = huge
8       )
9       then (TheResult = true)
10      else (TheResult = false)
11      endif
12      result = TheResult
13     )}
```

Listing 5.37: Messir (MCL-oriented) specification of the operation *is*.

## 5.30 Primary Types - Operation Schemes for Enumeration etHumanKind

### 5.30.1 Operation Model for is

The `is` operation has the following properties:

| OPERATION |
|---|
| ***is*** <br> used to determine which litteral belongs to the enumeration. |
| ***Return type*** |
| ptBoolean |
| ***Post-Condition (functional)*** |
| PostF 1 true iff the value is equal to one of the following values: `witness,victim,anonym` |

The listing 5.38 provides the Messir (MCL-oriented) specification of the operation.

```
1
2  /* Post Functional:*/
3  postF{let TheResult: ptBoolean in
4      ( if
5       ( self = witness
6        or self = victim
7        or self = anonymous
8       )
9       then (TheResult = true)
```

```
10      else (TheResult = false)
11      endif
12      result = TheResult
13     )}
```

Listing 5.38: Messir (MCL-oriented) specification of the operation *is*.

## 5.31 Secondary Types - Operation Schemes for Classes

There are no elements in this category in the system analysed.

## 5.32 Secondary Types - Operation Schemes for Datatype dtSMS

### 5.32.1 Operation Model for is

The `is` operation has the following properties:

| OPERATION |
|---|
| ***is*** <br> used to determine which strings are considered as valid comments |
| ***Return type*** |
| ptBoolean |
| ***Post-Condition (functional)*** |
| PostF 1 true iff the length of the string value is not more than 160 characters. |

The listing 5.39 provides the Messir (MCL-oriented) specification of the operation.

```
1
2  /* Post Functional:*/
3  postF{let TheResult: ptBoolean in
4      let MaxLength: ptInteger in
5      ( if
6       ( MaxLength = 160
7        and self.value.length().leq(MaxLength)
8       )
9       then (TheResult = true)
10      else (TheResult = false)
11      endif
12      result = TheResult
13     )}
```

Listing 5.39: Messir (MCL-oriented) specification of the operation *is*.

## 5.33 Secondary Types - Operation Schemes for Enumerations

There are no elements in this category in the system analysed.

# Chapter 6

# Test Model(s)

## 6.1 Test Model for testcase01

this positive test case intends to verify the correctness of the execution of a simple instance of the `suDeployAndRun` use case.

### 6.1.1 Test Steps Specification

#### 6.1.1.1 testcase01-ts01oeCreateSystemAndEnvironment-actMsrCreator.outactMsrCreator.oeCreateSy

The `testcase01-ts01oeCreateSystemAndEnvironment-actMsrCreator.outactMsrCreator.oeCreat` has the following properties:

| **Test Step** | |
|---|---|
| ***ts01oeCreateSystemAndEnvironment***<br>This test step initializes the system state and environment. | |
| ***Test Sent Message*** | |
| TSM 1 | **out:Creator**<br>**sends to system**<br>**actMsrCreator.outactMsrCreator.oeCreateSystemAndEnvironment (AqtyComCompanies)** |
| ***Variables*** | |
| V 1 | **Creator:icrash.environment.actMsrCreator**<br>only actMsrtCreator actors can trigger the system and environment creation and initialization. |
| ***Constraints*** | |
| C 1 | the number of communication company actor instances present in the environment is equal to four to represent all the communication companies available in Luxembourg. |
| ***Oracle Constraints*** | |
| OC 1 | true for testing only the executability (is available and can be triggered) of the operation. |

The listing 6.1 provides the Messir (MCL-oriented) specification of the test step.

```
1
2  variables{
3   Creator:actMsrCreator
4   AqtyComCompanies: ptInteger
5  }
6
7  constraints{
8   AqtyComCompanies = 4
9  }
10
11 oracle{
12  constraints{
13   true
14  }
15 }
```

Listing 6.1: Messir (MCL-oriented) specification of the test step *testcase01-ts01oeCreateSystemAndEnvironment*.

#### 6.1.1.2 testcase01-ts02oeSetClock-actActivator.outactActivator.oeSetClock

The `testcase01-ts02oeSetClock-actActivator.outactActivator.oeSetClock` has the following properties:

| **Test Step** | |
|---|---|
| ***ts02oeSetClock***<br>test the update of the current time. | |
| ***Test Sent Message*** | |
| TSM 1 | **out:TheActor**<br>**sends to system**<br>**actActivator.outactActivator.oeSetClock (ACurrentClock)** |
| ***Variables*** | |
| V 1 | **TheActor:actActivator**<br>proactive actor responsible of requesting the update of the system's clock. |
| ***Constraints*** | |
| C 1<br>C 2 | TheActor is any instance existing in the current environment status.<br>ACurrentClock is a fixed date equal to the 24th November 2017 at 15:20:00 using a 24-hours notation [1]. |
| ***Oracle Constraints*** | |
| OC 1 | true for testing only the executability (is available and can be triggered) of the operation. |

The listing 6.2 provides the Messir (MCL-oriented) specification of the test step.

```
1
2  variables{
3   TheActor:actActivator
4   ACurrentClock:dtDateAndTime
```

[1] for more details see the ISO 8601 Data elements and interchange formats - Information interchange - Representation of dates and times - http://www.iso.org/iso/home/standards/iso8601.htm

```
5  }
6
7  constraints{
8   TheActor=TheSystem.rnactActivator->any2(true)
9   ACurrentClock.date.year.value = 2017
10  ACurrentClock.date.month.value = 11
11  ACurrentClock.date.day.value = 24
12  ACurrentClock.time.hour.value = 15
13  ACurrentClock.time.minute.value = 20
14  ACurrentClock.time.second.value = 00
15 }
16
17 oracle{
18  constraints{
19   true
20  }
21 }
```

Listing 6.2: Messir (MCL-oriented) specification of the test step *testcase01-ts02oeSetClock*.

#### 6.1.1.3 testcase01-ts03oeLogin-actAdministrator.outactAdministrator.oeLogin

The `testcase01-ts03oeLogin-actAdministrator.outactAdministrator.oeLogin` has the following properties:

| **Test Step** | |
|---|---|
| ***ts03oeLogin*** | |
| test the authentified access of the administrator | |
| ***Test Sent Message*** | |
| TSM 1 | **out:TheActor**<br>**sends to system**<br>**actAdministrator.outactAdministrator.oeLogin (AdtLogin, AdtPassword)** |
| ***Variables*** | |
| V 1 | **TheActor:actAdministrator**<br>an actAdministor actor as subtype of actAuthenticated can send oeLogin messages to the system. |
| ***Constraints*** | |
| C 1 | TheActor is any `actAdministrator` instance existing in the environment. It is thus expected that there exist at least one. |
| C 2 | AdtLogin has its value attribute equal to the primitive string 'icrashadmin' (which is the correct administrator login known by the system after the step one.) |
| C 3 | AdtPassword has its value attribute equal to the primitive string '7WXC1359' (which is the correct administrator password known by the system after the step one.) |
| ***Oracle Constraints*** | |
| OC 1 | the `AMessage` value is expected to be equal to the primitive string 'You are logged ! Welcome ...' |
| OC 2 | TheActor receives from system ieMessage(AMessage) |

The listing 6.3 provides the Messir (MCL-oriented) specification of the test step.

```
1
2  variables{
3   TheActor : actAdministrator
4   AdtLogin:dtLogin
5   AdtPassword:dtPassword
6  }
7
8  constraints{
9   TheActor=TheSystem.rnactAdministrator->any2(true)
10  AdtLogin.value.eq('icrashadmin')
11  AdtPassword.value.eq('7WXC1359')
12 }
13
14 oracle{
15  variables{
16   AMessage:ptString
17  }
18  constraints{
19   AMessage = 'You are logged ! Welcome ...'
20   TheActor.inactAdministrator.ieMessage(AMessage)
21  }
22 }
```

Listing 6.3: Messir (MCL-oriented) specification of the test step *testcase01-ts03oeLogin*.

#### 6.1.1.4 testcase01-ts04oeAddCoordinator-actAdministrator.outactAdministrator.oeAddCoordina

The `testcase01-ts04oeAddCoordinator-actAdministrator.outactAdministrator.oeAddCoor` has the following properties:

| **Test Step** | |
|---|---|
| ***ts04oeAddCoordinator*** to test the add of a new coordinator by an administrator. | |
| ***Test Sent Message*** | |
| TSM 1 | **out:TheActor**<br>**sends to system**<br>**actAdministrator.outactAdministrator.oeAddCoordinator (AdtCoordinatorID, AdtLogin, AdtPassword)** |
| ***Variables*** | |
| V 1 | **TheActor:actAdministrator**<br>actAdministor actors as being the only one allowed to add coordinators. |
| ***Constraints*** | |
| C 1 | TheActor is any `actAdministrator` instance existing in the environment. It is expected that there exists at least one which is the same during all the test case. |
| C 2 | AdtCoordinatorID is equal to 1 to set the new coordinator ID |
| C 3 | AdtLogin has its value attribute equal to the primitive string 'steve' which is the ID defined for the new coordinator. |
| C 4 | AdtPassword has its value attribute equal to the primitive string 'pwdMessirExcalibur2017' which is the password to be set for steve. |
| ***Oracle Constraints*** | |
| OC 1 | the administrator should have been acknowledged for the adding of the new coordinator. |

The listing 6.4 provides the Messir (MCL-oriented) specification of the test step.

```

variables{
 TheActor : actAdministrator
 AdtCoordinatorID : dtCoordinatorID
 AdtLogin:dtLogin
 AdtPassword:dtPassword
}

constraints{
 TheActor = TheSystem.rnactAdministrator->any2(true)
 AdtCoordinatorID.value.eq('1')
 AdtLogin.value.eq('steve')
 AdtPassword.value.eq('pwdMessirExcalibur2017')
}

oracle{
 constraints{
  TheActor.inactAdministrator.ieCoordinatorAdded()
 }
}
```

Listing 6.4: Messir (MCL-oriented) specification of the test step *testcase01-ts04oeAddCoordinator*.

#### 6.1.1.5 testcase01-ts05oeLogout-actAdministrator.outactAdministrator.oeLogout

The `testcase01-ts05oeLogout-actAdministrator.outactAdministrator.oeLogout` has the following properties:

| **Test Step** | |
|---|---|
| ***ts05oeLogout*** to test the loggout of a connected administrator. | |
| ***Test Sent Message*** | |
| TSM 1 | **out:TheActor**<br>**sends to system**<br>**actAdministrator.outactAdministrator.oeLogout ()** |
| ***Variables*** | |
| V 1 | **TheActor:actAdministrator** an actAdministor actor as subtype of actAuthenticated can send oeLogout messages to the system. |
| ***Constraints*** | |
| C 1 | TheActor is any `actAdministrator` instance existing in the environment. It is expected that there exists at least one which is the same during all the test case. |
| ***Oracle Constraints*** | |
| OC 1 | the `AMessage` value is expected to be equal to the primitive string 'You are logged out ! Good Bye ...' |
| OC 2 | the administrator should have received the messahe AMessage. |

The listing 6.5 provides the Messir (MCL-oriented) specification of the test step.

```
1
2  variables{
3   TheActor : actAdministrator
4  }
5
6  constraints{
7   TheActor = TheSystem.rnactAdministrator->any2(true)
8  }
9
10 oracle{
11  variables{
12   AMessage:ptString
13  }
14  constraints{
15   AMessage = 'You are logged out ! Good Bye ...'
16   TheActor.inactAdministrator.ieMessage(AMessage)
17  }
18 }
```

Listing 6.5: Messir (MCL-oriented) specification of the test step *testcase01-ts05oeLogout*.

#### 6.1.1.6 testcase01-ts06oeSetClock02-actActivator.outactActivator.oeSetClock

The `testcase01-ts06oeSetClock02-actActivator.outactActivator.oeSetClock` has the following properties:

| **Test Step** | |
|---|---|
| ***ts06oeSetClock02***<br>test the update of the current time. | |
| ***Test Sent Message*** | |
| TSM 1 | **out:TheActor**<br>**sends to system**<br>**actActivator.outactActivator.oeSetClock (ACurrentClock)** |
| ***Variables*** | |
| V 1 | **TheActor:icrash.environment.actActivator**<br>proactive actors responsible of requesting the update of the system's clock. |
| ***Constraints*** | |
| C 1<br>C 2 | TheActor is any instance existing in the current environment status.<br>ACurrentClock is a fixed date equal to the 26th November 2017 at 10:15:00 using a 24-hours notation. |
| ***Oracle Constraints*** | |
| OC 1 | true for testing only the executability (is available and can be triggered) of the operation. |

The listing 6.6 provides the Messir (MCL-oriented) specification of the test step.

```
1
2  variables{
```

```
3   TheActor:actActivator
4   ACurrentClock:dtDateAndTime
5  }
6
7  constraints{
8   TheActor=TheSystem.rnactActivator->any2(true)
9   ACurrentClock.date.year.value = 2017
10  ACurrentClock.date.month.value = 11
11  ACurrentClock.date.day.value = 26
12  ACurrentClock.time.hour.value = 10
13  ACurrentClock.time.minute.value = 15
14  ACurrentClock.time.second.value = 00
15 }
16
17 oracle{
18  constraints{
19   true
20  }
21 }
```

Listing 6.6: Messir (MCL-oriented) specification of the test step *testcase01-ts06oeSetClock02*.

#### 6.1.1.7 testcase01-ts07oeAlert1-actComCompany.outactComCompany.oeAlert

The `testcase01-ts07oeAlert1-actComCompany.outactComCompany.oeAlert` has the following properties:

| **Test Step** | |
|---|---|
| ***ts07oeAlert1*** tests the declaration of a new alert functionality. | |
| ***Test Sent Message*** | |
| TSM 1 | **out:TheActor**<br>**sends to system**<br>**actComCompany.outactComCompany.oeAlert (AetHumanKind, AdtDate, AdtTime, AdtPhoneNumber, AdtGPSLocation, AdtComment)** |
| ***Variables*** | |
| V 1 | **TheActor:actComCompany**<br>actComCompany actors transfer alert declaration messages. |
| ***Constraints*** | |
| C 1 | TheActor is any instance existing in the current environment status. It is expected to exist at least one. |
| C 2 | AetHumanKind is equal to witness |
| C 3 | AdtDate is equal to the 26th of November 2017 |
| C 4 | AdtTime is equal to 10:10:16 using a 24-hours. |
| C 5 | AdtPhoneNumber is equal to the ptString value '+3524666445252'. |
| C 6 | AdtGPSLocation is equal to (49.627675 , 6.159590). |
| C 7 | AdtComment is equal to '3 cars involved in an accident.' |
| ***Oracle Constraints*** | |
| OC 1 | AdtSMS is equal to the ptString 'Your alert has been registered. We will handle it and keep you informed'. |

***continues in next page . . .***

***... Test Step table continuation***

| | |
|---|---|
| OC 2 | AdtSMS is sent to the phone number AdtPhoneNumber using the communication company having sent the alert using its ieSmsSend input message. |

The listing 6.7 provides the Messir (MCL-oriented) specification of the test step.

```
1
2  variables{
3   TheActor : actComCompany
4   AetHumanKind:etHumanKind
5   AdtDate:dtDate
6   AdtTime:dtTime
7   AdtPhoneNumber:dtPhoneNumber
8   AdtGPSLocation:dtGPSLocation
9   AdtComment:dtComment
10  }
11
12 constraints{
13  TheActor = TheSystem.rnactComCompany->any2(true)
14  AetHumanKind = witness
15  AdtDate.year.value = 2017
16  AdtDate.month.value = 11
17  AdtDate.day.value = 26
18  AdtTime.hour.value = 10
19  AdtTime.minute.value = 10
20  AdtTime.second.value = 16
21  AdtPhoneNumber.value = '+3524666445252'
22  AdtGPSLocation.latitude.value = 49.627675
23  AdtGPSLocation.longitude.value = 6.159590
24  AdtComment.value = '3 cars involved in an accident.'
25 }
26
27 oracle{
28  variables{
29   AdtSMS:dtSMS
30  }
31  constraints{
32   AdtSMS.value = 'Your alert has been registered. We will handle it and keep you informed'
33   TheActor.inactComCompany.ieSmsSend(AdtPhoneNumber,AdtSMS)
34  }
35 }
```

Listing 6.7: Messir (MCL-oriented) specification of the test step *testcase01-ts07oeAlert1*.

#### 6.1.1.8 testcase01-ts08oeSetClock03-actActivator.outactActivator.oeSetClock

The `testcase01-ts08oeSetClock03-actActivator.outactActivator.oeSetClock` has the following properties:

| Test Step |
|---|
| ***ts08oeSetClock03***<br>test the update of the current time. |
| ***Test Sent Message*** |

***continues in next page ...***

***... Test Step table continuation***

| | |
|---|---|
| TSM 1 | **out:TheActor**<br>**sends to system**<br>**actActivator.outactActivator.oeSetClock (ACurrentClock)** |
| ***Variables*** | |
| V 1 | **TheActor:actActivator**<br>proactive actor responsible of requesting the update of the system's clock. |
| ***Constraints*** | |
| C 1<br>C 2 | TheActor is any instance existing in the current environment status.<br>ACurrentClock is a fixed date equal to the 26th November 2017 at 10:30:00 using a 24-hours notation. |
| ***Oracle Constraints*** | |
| OC 1 | true for testing only the executability (is available and can be triggered) of the operation. |

The listing 6.8 provides the Messir (MCL-oriented) specification of the test step.

```
1
2  variables{
3   TheActor:actActivator
4   ACurrentClock:dtDateAndTime
5  }
6
7  constraints{
8   TheActor=TheSystem.rnactActivator->any2(true)
9   ACurrentClock.date.year.value = 2017
10  ACurrentClock.date.month.value = 11
11  ACurrentClock.date.day.value = 26
12  ACurrentClock.time.hour.value = 10
13  ACurrentClock.time.minute.value = 30
14  ACurrentClock.time.second.value = 00
15 }
16
17 oracle{
18  constraints{
19   true
20  }
21 }
```

#### 6.1.1.9 testcase01-ts09oeSollicitateCrisisHandling-actActivator.outactActivator.oeSollicitateCrisisHan

The `testcase01-ts09oeSollicitateCrisisHandling-actActivator.outactActivator.oeSollicit` has the following properties:

| Test Step |
|---|
| ***ts09oeSollicitateCrisisHandling***<br>test the proactive sollication to handle an alert. |
| ***Test Sent Message*** |

***continues in next page ...***

***... Test Step table continuation***

| | |
|---|---|
| TSM 1 | **out:TheActor**<br>**sends to system**<br>**actActivator.outactActivator.oeSollicitateCrisisHandling** () |
| ***Variables*** | |
| V 1 | **TheActor:icrash.environment.actActivator**<br>proactive actor responsible of triggering sollicitation functionality. |
| ***Constraints*** | |
| C 1 | TheActor is any instance existing in the current environment status. It is expected to exist at least one. |
| ***Oracle Variables*** | |
| OV 1 | **TheAdministrator:actAdministrator**<br>actAdministrator actors can be sollicitated to handle alerts. |
| OV 2 | **TheCoordinator:actCoordinator**<br>actCoordinator actors can be sollicitated to handle alerts. |
| OV 3 | **AMessageForCrisisHandlers:ptString**<br>messages sent to sollicitated actors are of type ptString. |
| ***Oracle Constraints*** | |
| OC 1 | TheAdministrator is any instance existing in the current environment status. It is expected to exist at least one. |
| OC 2 | TheCoordinator is any instance existing in the current environment status. It is expected to exist at least one. |
| OC 3 | AMessageForCrisisHandlers is equal to the ptString 'There are alerts pending since more than the defined delay. Please REACT !' |
| OC 4 | TheCoordinator and TheAdministrator have received the message AMessageForCrisisHandlers. |

The listing 6.9 provides the Messir (MCL-oriented) specification of the test step.

```
1
2  variables{
3   TheActor : actActivator
4  }
5
6  constraints{
7   TheActor = TheSystem.rnactActivator->any2(true)
8  }
9
10 oracle{
11  variables{
12   TheAdministrator:actAdministrator
13   TheCoordinator:actCoordinator
14   AMessageForCrisisHandlers:ptString
15  }
16  constraints{
17   TheAdministrator = TheSystem.rnactAdministrator->any2(true)
18   TheCoordinator = TheSystem.rnactCoordinator->any2(true)
19   AMessageForCrisisHandlers = 'There are alerts pending since more than the defined delay. Please
         REACT !'
20   TheAdministrator.inactAdministrator.ieMessage(AMessageForCrisisHandlers)
```

```
21    TheCoordinator.inactAdministrator.ieMessage(AMessageForCrisisHandlers)
22   }
23  }
```

Listing 6.9: Messir (MCL-oriented) specification of the test step *testcase01-ts09oeSollicitateCrisisHandling*.

#### 6.1.1.10 testcase01-ts10oeLogin02-actAuthenticated.outactAuthenticated.oeLogin

The `testcase01-ts10oeLogin02-actAuthenticated.outactAuthenticated.oeLogin` has the following properties:

| **Test Step** | |
|---|---|
| ***ts10oeLogin02***<br>test the authentified access of the coordinator | |
| ***Test Sent Message*** | |
| TSM 1 | **out:TheActor**<br>**sends to system**<br>**actAuthenticated.outactAuthenticated.oeLogin (AdtLogin, AdtPassword)** |
| ***Variables*** | |
| V 1 | **TheActor:actCoordinator**<br>an actCoordinator actor as subtype of actAuthenticated can send oeLogin messages to the system. |
| ***Constraints*** | |
| C 1 | TheActor is any `actAdministrator` instance existing in the environment. It is thus expected that there exist at least one. |
| C 2 | AdtLogin has its value attribute equal to the primitive string 'icrashadmin' (which is the correct administrator login known by the system after the step one.) |
| C 3 | AdtPassword has its value attribute equal to the primitive string '7WXC1359' (which is the correct administrator password known by the system after the step one.) |
| ***Oracle Constraints*** | |
| OC 1 | the `AMessage` value is expected to be equal to the primitive string 'You are logged ! Welcome ...' |

The listing 6.10 provides the Messir (MCL-oriented) specification of the test step.

```

variables{
 TheActor : actCoordinator
 AdtLogin:dtLogin
 AdtPassword:dtPassword
}

constraints{
 TheActor = TheSystem.rnactCoordinator->select(a | a.rnctCoordinator.login.value.eq('steve'))->any2
     (true)
 AdtLogin.value.eq('steve')
 AdtPassword.value.eq('pwdMessirExcalibur2017')
```

```
12 }
13
14 oracle{
15  variables{
16   AMessage:ptString
17  }
18  constraints{
19   AMessage = 'You are logged ! Welcome ...'
20   TheActor.inactAuthenticated.ieMessage(AMessage)
21  }
22 }
```

Listing 6.10: Messir (MCL-oriented) specification of the test step *testcase01-ts10oeLogin02*.

#### 6.1.1.11 testcase01-ts11oeGetCrisisSet-actCoordinator.outactCoordinator.oeGetCrisisSet

The `testcase01-ts11oeGetCrisisSet-actCoordinator.outactCoordinator.oeGetCrisisSet` has the following properties:

| **Test Step** | |
|---|---|
| ***ts11oeGetCrisisSet***<br>cf. actor documentation | |
| ***Test Sent Message*** | |
| TSM 1 | **out:TheActor**<br>**sends to system**<br>**actCoordinator.outactCoordinator.oeGetCrisisSet (AetCrisisStatus)** |
| ***Variables*** | |
| V 1 | **TheActor:icrash.environment.actCoordinator**<br>cf. actor documentation |
| V 2 | **AetCrisisStatus:icrash.concepts.primarytypes.datatypes.etCrisisStatus**<br>cf. actor documentation |
| V 3 | **ActCrisis:icrash.concepts.primarytypes.classes.ctCrisis**<br>cf. actor documentation |
| ***Constraints*** | |
| C 1 | TheActor is the coordinator actor related to a coordinator in the system's state having steve as login value |
| C 2 | AetCrisisStatus value is pending |
| ***Oracle Constraints*** | |
| OC 1 | ActCrisis is any ctCrisis instance that has been sent to TheActor. |

The listing 6.11 provides the Messir (MCL-oriented) specification of the test step.

```
1
2 variables{
3  TheActor : actCoordinator
4  AetCrisisStatus : etCrisisStatus
5 }
6
7 constraints{
```

```
 TheActor=TheSystem.rnactCoordinator
       ->select(a | a.rnctCoordinator.login.value.eq('steve'))
       ->any2(true)
 AetCrisisStatus = pending
}

oracle{
 variables{
  ActCrisis:ctCrisis
 }
 constraints{
  TheActor.inactCoordinator.ieSendACrisis(ActCrisis)
 }
}
```

Listing 6.11: Messir (MCL-oriented) specification of the test step *testcase01-ts11oeGetCrisisSet*.

#### 6.1.1.12 testcase01-ts12oeSetCrisisHandler-actCoordinator.outactCoordinator.oeSetCrisisHandler

The `testcase01-ts12oeSetCrisisHandler-actCoordinator.outactCoordinator.oeSetCrisisHand` has the following properties:

| **Test Step** | |
|---|---|
| ***ts12oeSetCrisisHandler***<br>cf. actor documentation | |
| ***Test Sent Message*** | |
| TSM 1 | **out:TheActor**<br>**sends to system**<br>**actCoordinator.outactCoordinator.oeSetCrisisHandler (AdtCrisisID)** |
| ***Variables*** | |
| V 1 | **TheActor:icrash.environment.actCoordinator**<br>cf. actor documentation |
| V 2 | **TheComCompany:icrash.environment.actComCompany**<br>cf. actor documentation |
| V 3 | **TheCoordinator:icrash.environment.actCoordinator**<br>cf. actor documentation |
| V 4 | **AdtCrisisID:icrash.concepts.primarytypes.datatypes.dtCrisisID**<br>cf. actor documentation |
| V 5 | **AMessage:lu.uni.lassy.messir.libraries.primitives.ptString**<br>cf. actor documentation |
| V 6 | **AdtPhoneNumber:icrash.concepts.primarytypes.datatypes.dtPhoneNumber**<br>cf. actor documentation |
| V 7 | **AdtSMS:icrash.concepts.secondarytypes.datatypes.dtSMS**<br>cf. actor documentation |
| V 8 | **ActAlert:icrash.concepts.primarytypes.classes.ctAlert**<br>cf. actor documentation |
| ***Constraints*** | |
| C 1 | TheActor is the coordinator actor related to a coordinator in the system's state having steve as login value |
| C 2 | AdtCrisisID as a value of 1 |

***continues in next page . . .***

***... Test Step table continuation***

| | |
|---|---|
| C 3 | AMessage is the string 'You are now considered as handling the crisis !' |
| C 4 | AdtPhoneNumber |
| C 5 | AdtSMS has for value the string 'The handling of your alert by our services is in progress !' |
| ***Oracle Constraints*** | |
| OC 1 | there is a communication company actor that received the message ieSmsSend(AdtPhoneNumber,AdtSMS) |
| OC 2 | there is a coordinator actor that received an alert using the message ieSendAnAlert(ActAlert) |

The listing 6.12 provides the Μεσσιρ (MCL-oriented) specification of the test step.

```
1
2  variables{
3   TheActor : actCoordinator
4   AdtCrisisID : dtCrisisID
5  }
6
7  constraints{
8   TheActor=TheSystem.rnactCoordinator
9         ->select(a | a.rnctCoordinator.login.value.eq('steve'))
10        ->any2(true)
11 }
12
13 oracle{
14  variables{
15   AMessage:ptString
16   AdtPhoneNumber:dtPhoneNumber
17   AdtSMS:dtSMS
18   ActAlert:ctAlert
19   TheComCompany: actComCompany
20   TheCoordinator:actCoordinator
21  }
22  constraints{
23   AMessage = 'You are now considered as handling the crisis !'
24   AdtSMS.value = 'The handling of your alert by our services is in progress !'
25   TheComCompany.inactComCompany.ieSmsSend(AdtPhoneNumber,AdtSMS)
26   TheCoordinator.inactCoordinator.ieSendAnAlert(ActAlert)
27   TheActor.inactAuthenticated.ieMessage(AMessage)
28  }
29 }
```

Listing 6.12: Μεσσιρ (MCL-oriented) specification of the test step *testcase01-ts12oeSetCrisisHandler*.

#### 6.1.1.13 testcase01-ts13oeSetClock04-actActivator.outactActivator.oeSetClock

The `testcase01-ts13oeSetClock04-actActivator.outactActivator.oeSetClock` has the following properties:

| TEST STEP |
|---|
| ***ts13oeSetClock04***<br>cf. actor documentation |
| ***Test Sent Message*** |

***continues in next page ...***

***... Test Step table continuation***

| | |

| *Variables* | |
| V 1 | **TheActor:icrash.environment.actActivator**<br>cf. actor documentation |
| V 2 | **ACurrentClock:lu.uni.lassy.messir.libraries.calendar.dtDateAndTime**<br>cf. actor documentation |
| *Constraints* | |
| C 1 | TheActor |
| C 2 | ACurrentClock |

The listing 6.13 provides the Messir (MCL-oriented) specification of the test step.

```
1
2  variables{
3   TheActor:actActivator
4   ACurrentClock:dtDateAndTime
5  }
6
7  constraints{
8   TheActor=TheSystem.rnactActivator->any2(true)
9   ACurrentClock.date.year.value = 2017
10  ACurrentClock.date.month.value = 11
11  ACurrentClock.date.day.value = 26
12  ACurrentClock.time.hour.value = 10
13  ACurrentClock.time.minute.value = 45
14  ACurrentClock.time.second.value = 00
15 }
16
17 oracle{
18  constraints{
19   true
20  }
21 }
```

Listing 6.13: Messir (MCL-oriented) specification of the test step *testcase01-ts13oeSetClock04*.

#### 6.1.1.14 testcase01-ts14oeValidateAlert-actCoordinator.outactCoordinator.oeValidateAlert

The `testcase01-ts14oeValidateAlert-actCoordinator.outactCoordinator.oeValidateAlert` has the following properties:

| Test Step |
|---|
| ***ts14oeValidateAlert***<br>cf. actor documentation |
| ***Test Sent Message*** |

***continues in next page ...***

***... Test Step table continuation***

| | |
|---|---|
| TSM 1 | **out:TheActor**<br>**sends to system**<br>**actCoordinator.outactCoordinator.oeValidateAlert (AdtAlertID)** |

19   AMessage = 'The crisis comment has been updated !'
20   TheActor.inactAuthenticated.ieMessage(AMessage)
21  }
22 }
```

Listing 6.18: MESSIR (MCL-oriented) specification of the test step *testcase01-ts18oeReportOnCrisis*.

#### 6.1.1.19 testcase01-ts19oeCloseCrisis-actCoordinator.outactCoordinator.oeCloseCrisis

The `testcase01-ts19oeCloseCrisis-actCoordinator.outactCoordinator.oeCloseCrisis` has the following properties:

| TEST STEP |
|---|
| ***ts19oeCloseCrisis***<br>cf. actor documentation |
| ***Test Sent Message*** |

***continues in next page ...***

***... Test Step table continuation***

| | |
|---|---|
| TSM 1 | **out:TheActor**<br>**sends to system**<br>**actCoordinator.outactCoordinator.oeCloseCrisis (AdtCrisisID)** |
| ***Variables*** | |
| V 1 | **TheActor:icrash.environment.actCoordinator**<br>cf. actor documentation |
| V 2 | **AdtCrisisID:icrash.concepts.primarytypes.datatypes.dtCrisisID**<br>cf. actor documentation |
| V 3 | **AMessage:lu.uni.lassy.messir.libraries.primitives.ptString**<br>cf. actor documentation |
| ***Constraints*** | |
| C 1 | TheActor is the coordinator actor related to a coordinator in the system's state having steve as login value |
| C 2 | AdtCrisisID |
| C 3 | AMessage |
| ***Oracle Constraints*** | |
| OC 1 | |

The listing 6.19 provides the Messir (MCL-oriented) specification of the test step.

```
1
2  variables{
3   TheActor : actCoordinator
4   AdtCrisisID : dtCrisisID
5  }
6
7  constraints{
8   TheActor=TheSystem.rnactCoordinator
9         ->select(a | a.rnctCoordinator.login.value.eq('steve'))
10        ->any2(true)
11 }
12
13 oracle{
14  variables{
15   AMessage:ptString
16  }
17  constraints{
18   AMessage = 'The crisis is now closed !'
19   TheActor.inactAuthenticated.ieMessage(AMessage)
20  }
21 }
```

# Chapter 7

# Additional Constraints

## 7.1 Quality Constraints

Description of all the constraints that concern the required quality criteria according to their ISO definition [**?**].

### 7.1.1 Functional suitability

Constraints on the degree to which the product provides functions that meet stated and implied needs when the product is used under specified conditions.

#### 7.1.1.1 Functional completeness

List of requirements on the degree to which the set of functions covers all the specified tasks and user objectives.

1. (to be filled)

#### 7.1.1.2 Functional correctness

List of requirements on the degree to which the set of functions covers all the specified tasks and user objectives.

1. (to be filled)

#### 7.1.1.3 Functional appropriateness

List of requirements on the degree to which the functions facilitate the accomplishment of specified tasks and objectives.

1. (to be filled)

### 7.1.2 Performance efficiency

Constraints on the performance relative to the amount of resources used under stated conditions

#### 7.1.2.1 Time behaviour

List of requirements on the degree to which the response and processing times and throughput rates of a product or system, when performing its functions, meet requirements.

1. (to be filled)

#### 7.1.2.2 Resource utilization

List of requirements on the degree to which the amounts and types of resources used by a product or system, when performing its functions, meet requirements.

1. (to be filled)

#### 7.1.2.3 Capacity

List of requirements on the degree to which the maximum limits of a product or system parameter meet requirements.

1. (to be filled)

### 7.1.3 Compatibility

Constraints on the degree to which a product, system or component can exchange information with other products, systems or components, and/or perform its required functions, while sharing the same hardware or software environment.

#### 7.1.3.1 Co-existence

List of requirements on the degree to which a product can perform its required functions efficiently while sharing a common environment and resources with other products, without detrimental impact on any other product.

1. (to be filled)

#### 7.1.3.2 Interoperability

List of requirements on the degree to which two or more systems, products or components can exchange information and use the information that has been exchanged.

1. (to be filled)

### 7.1.4 Usability

Constraints on the usability degree to which a product or system can be used by specified users to achieve specified goals with effectiveness, efficiency and satisfaction in a specified context of use.

#### 7.1.4.1 Appropriateness recognizability

List of requirements on the degree to which users can recognize whether a product or system is appropriate for their needs.

1. (to be filled)

#### 7.1.4.2 Learnability

List of requirements on the degree to which a product or system can be used by specified users to achieve specified goals of learning to use the product or system with effectiveness, efficiency, freedom from risk and satisfaction in a specified context of use.

1. (to be filled)

#### 7.1.4.3 Operability

List of requirements on the degree to which a product or system has attributes that make it easy to operate and control.

1. (to be filled)

#### 7.1.4.4 User error protection

List of requirements on the degree to which a system protects users against making errors.

1. (to be filled)

#### 7.1.4.5 User interface aesthetics

List of requirements on the degree to which a user interface enables pleasing and satisfying interaction for the user.

1. (to be filled)

#### 7.1.4.6 Accessibility

List of requirements on the degree to which a product or system can be used by people with the widest range of characteristics and capabilities to achieve a specified goal in a specified context of use.

1. (to be filled)

### 7.1.5 Reliability

Contraints on the degree to which a system, product or component performs specified functions under specified conditions for a specified period of time.

#### 7.1.5.1 Maturity

List of requirements on the degree to which a system, product or component meets needs for reliability under normal operation.

1. (to be filled)

#### 7.1.5.2 Availability

List of requirements on the degree to which a system, product or component is operational and accessible when required for use.

1. (to be filled)

#### 7.1.5.3 Fault tolerance

List of requirements on the degree to which a system, product or component operates as intended despite the presence of hardware or software faults.

1. (to be filled)

#### 7.1.5.4 Recoverability

List of requirements on the degree to which, in the event of an interruption or a failure, a product or system can recover the data directly affected and re-establish the desired state of the system.

1. (to be filled)

### 7.1.6 Security

Contraints on the degree to which a product or system protects information and data so that persons or other products or systems have the degree of data access appropriate to their types and levels of authorization.

#### 7.1.6.1 Confidentiality

List of requirements on the degree to which a product or system ensures that data are accessible only to those authorized to have access.

1. (to be filled)

#### 7.1.6.2 Integrity

List of requirements on the degree to which a system, product or component prevents unauthorized access to, or modification of, computer programs or data.

1. (to be filled)

#### 7.1.6.3 Non-repudiation

List of requirements on the degree to which actions or events can be proven to have taken place, so that the events or actions cannot be repudiated later.

1. (to be filled)

#### 7.1.6.4 Accountability

List of requirements on the degree to which the actions of an entity can be traced uniquely to the entity.

1. (to be filled)

#### 7.1.6.5 Authenticity

List of requirements on the degree to which the identity of a subject or resource can be proved to be the one claimed.

1. (to be filled)

### 7.1.7 Maintainability

Contraints on the degree of effectiveness and efficiency with which a product or system can be modified by the intended maintainers.

#### 7.1.7.1 Modularity

List of requirements on the degree to which a system or computer program is composed of discrete components such that a change to one component has minimal impact on other components.

1. (to be filled)

#### 7.1.7.2 Reusability

List of requirements on the degree to which an asset can be used in more than one system, or in building other assets.

1. (to be filled)

#### 7.1.7.3 Analysability

List of requirements on the degree of effectiveness and efficiency with which it is possible to assess the impact on a product or system of an intended change to one or more of its parts, or to diagnose a product for deficiencies or causes of failures, or to identify parts to be modified.

1. (to be filled)

#### 7.1.7.4 Modifiability

List of requirements on the degree to which a product or system can be effectively and efficiently modified without introducing defects or degrading existing product quality.

1. (to be filled)

#### 7.1.7.5 Testability

List of requirements on the degree of effectiveness and efficiency with which test criteria can be established for a system, product or component and tests can be performed to determine whether those criteria have been met.

1. (to be filled)

### 7.1.8 Portability

Contraints on the degree of effectiveness and efficiency with which a system, product or component can be transferred from one hardware, software or other operational or usage environment to another.

#### 7.1.8.1 Adaptability

List of requirements on the degree to which a product or system can effectively and efficiently be adapted for different or evolving hardware, software or other operational or usage environments.

1. (to be filled)

#### 7.1.8.2 Installability

List of requirements on the degree of effectiveness and efficiency with which a product or system can be successfully installed and/or uninstalled in a specified environment.

1. (to be filled)

#### 7.1.8.3 Replaceability

List of requirements on the degree to which a product can replace another specified software product for the same purpose in the same environment.

1. (to be filled)

## 7.2 Other Constraints

Any other unclassified constraints judged as required for the product under development.

# Appendix B

# Specification project lu.uni.lassy.excalibur.examples.icrash

## B.1 Use Cases Model

This section contains the use cases elicited during the requirements elicitation phase. The use cases are textually described as suggested by the Messir method and inspired by the standard Cokburn template [?].

### B.1.1 Use Cases

#### B.1.1.1 subfunction-oeCloseCrisis

the `actCoordinator`'s goal is to declare a crisis as closed.

| **Use-Case Description** | |
|---|---|
| *Name* | oeCloseCrisis |
| *Scope* | system |
| *Level* | subfunction |
| ***Primary actor(s)*** | |
| 1 | `actCoordinator[active]` |
| ***Goal(s) description*** | |
| the `actCoordinator`'s goal is to declare a crisis as closed. | |
| ***Protocol condition(s)*** | |
| 1 | the iCrash system has been deployed. |
| ***Pre-condition(s)*** | |
| 1 | none |
| ***Main post-condition(s)*** | |
| 1 | the crisis is know by the system to be closed. |
| 2 | a message `ieMessage(AMessage)` is sent to the `actCoordinator` to inform him that his crisis is now considered as closed. |

Figure B.1 shows the use case diagram for the oeCloseCrisis subfunction use case

# Glossary

***abstract actor*** an actor that is not . . . . . 22

***actor*** An actor is a person, organization, or external system that plays a role in one or more interactions with the system . . . . . 18

***direct actor*** an actor that interacts directly with the system. It thus belongs to the environment. 22

***indirect actor*** an actor that interacts indirectly with the system through a direct actor. It thus belongs the domain but not to the environment. . . . . 22

**system operation** a functionality of the system that can be triggered by a message sent by an actor belonging to the environment. . . . . 18
